Figuring Close?

It pays to figure *close* for your customer, provided it is the Safford Patent Radiator that you are going to install for him. Figure close—don't be afraid of the profits. The Safford pays a good profit, and, better yet, *it absolutely cannot leak.* No bolts, no packing, *screw threaded nipple connections at every point.*

The Safford stands a pressure of 140 pounds to the square inch, yet it is light, durable, handsome, and fits curves, circles, angles. You can "figure close" on the Safford because you can be absolutely sure that it will give *perfect satisfaction.* It will advertise your business and your reputation too.

WHEN WRITING ADVERTISERS PLEASE MENTION THAT YOU SAW THEIR ADVERTISEMENT IN THIS PAPER

BRITISH IRON MARKET AND CANADA

ONE of the features of the market reports in the British trade papers to hand are the references therein to the part Canada is playing as a customer of iron and steel.

The malleable ironmakers of Glasgow, it appears, report free inquiries from Canada for hoops and strips for pipe-making purposes. A 3,000-ton order was received by a firm in Coatbridge about two weeks ago, and a pretty high price is understood to have been paid. A good order at good prices for boiler plates on Canadian account is also reported from Scotland. From South Wales comes the statement that good orders for tinplates have been placed from Canada.

In regard to the orders for hoops and strips for pipe making, it is explained that it is years since the Dominion was a taker of these descriptions of material from Glasgow.

While we see no notice of it in the British papers, it might be mentioned that Canada is also buying more freely of British galvanized iron and black sheets. The cause of this is the fact that the laid-down cost of both these is much lower than from the United States.

While the preferential tariff may have a little to do with the fact that Canada is buying in Great Britain what she, in recent years, has been buying from the United States, yet the chief cause is undoubtedly the high prices and extreme activity which obtains in the factories of the latter country.

As far as black sheets and galvanized iron are concerned, stocks imported from the United States are practically exhausted, so that these two lines are now not factors in the Canadian market, where a short time ago they were important factors.

HOUSEFURNISHING GOODS.

The large number of marriages that are taking place are no doubt inducing live hardwaremen to take steps to secure as much of the trade which the increased number of housekeepers necessarily creates.

Ordinary hardware lines, of course, every hardwareman has ready for the new housekeepers, but how is his stock in regard to housefurnishings? And if he is carrying a well-assorted stock, what means is he employing to bring the fact before those who have just embraced matrimony or are soon about to do so?

These are questions worth considering for they entail dollars and cents.

SUITABLE SUMMER LINES.

THERE are many little articles which hardwaremen might carry in stock during the summer, and thereby increase their sales during that season.

Campers and holiday-seekers who take their summer recreation in other ways come to the hardware store for a good many lines, such goods, for instance, as fishermen's supplies, guns, rifles, ammunition and cooking utensils. But why should not hardwaremen be in a position at the same time to supply them with traveling bags, valises, flask holders and other articles of that class? We see no reason why they should not.

A small expenditure would give one a start in this line, and, by tasty window displays and judicious advertising, we feel confident the experience would be found encouraging.

Nothing venture, nothing win.

MANILA ROPE IS DEARER.

Manila rope has been advanced 1c. per lb. by the makers in Canada, and jobbers' quotations to the retail trade have been advanced by a similar amount.

The base price in Toronto is now 12c. per lb. instead of 11c.

The cause of the advance is the appreciation in the cost of hemp due in turn to the depreciation in the visible supply.

About the middle of June last year, the visible supply was 177,895 bales; in 1897 it was 244,474. Now, it is only 91,989 bales.

Cables early this week gave the receipts of hemp at Manilla last week at 2,000 bales. This caused an advance in prices in London. Later in the week there was, however, a slight reaction in London.

Manufacturers in the United States are reported to be getting a little more anxious, owing to the strength of values.

WILL THERE BE AN EXPORT DUTY ON BRITISH COAL?

GREAT BRITAIN is somewhat concerned over the future of her coal supply, and ways and means of deferring the evil day as long as possible are being seriously discussed by trade press and daily papers.

No danger is, of course, anticipated during this generation, or, in fact, during the next two or three generations for that matter. But it is the generations beyond these for whom concern is felt.

As everyone knows Great Britain does a large export trade in coal; and it is still expanding. The latest returns to which we have access are those of 1897, and these show the exports in that year to have been 35,354,296 tons, valued at £15,584,542.

The exports during the five years ending 1897 were as follows:

	Tons.	Value.
1893	27,708,128	£13,540,607
1894	31,756,368	16,524,997
1895	31,714,906	14,600,326
1896	32,947,680	14,379,712
1897	35,354,296	15,584,542

The exports during the first four months of the present year were much larger than those of the corresponding periods of 1898 and 1897. For example, this year the total was 13,146,705 tons, against 11,109,798 and 10,810,714 tons respectively, for the four month periods of 1898 and 1897.

Large and valuable as this export trade is, there are a good many in Great Britain who are willing to sacrifice it in order that the coal supply may be reserved for home industries. And, to this end, it has been suggested that an export duty be imposed. One paper suggests starting it at 6d. per ton, which, if it did not check shipments, would add £1,000,000 to the revenue, it is argued. The Newcastle Chronicle terms this "idle nonsense," yet it urges prudent people to take stock of the position, and advises the appointment of a Royal Commission to investigate. The Glasgow Herald also opposes an export duty. It says that by an export bounty "a certain amount of coal might be kept at home to provide against the day when the coal supply will be exhausted, but whether it would be worth keeping at the cost of so much immediate loss and inconvenience is another question."

The Iron and Steel Trades Journal ventures the opinion that it would be idle nonsense to assert that 6d. per ton would check the foreign demand for British coal, "but," it adds, "having collected £1,000,000 in one year for the national exchequer, the tax could be doubled again, until the drain on the most valuable of our national resources ceased. * * * An export duty on coal, even if it were not heavy enough to check the shipments, would add something to the cost of fuel abroad, and would be indirectly of benefit to the British manufacturer."

At present the United Kingdom leads the world as a coal producer. The output in 1897 was 202,000,000 tons. The United States was next with 179,000,000 tons; France, 30,000,000 tons, and Belgium, 22,000,000 tons.

Coal beds, like all other things material, cannot last forever. But as long as coal is wanted it will probably be found somewhere, for, while the process is slow, the earth is ever manufacturing the article.

Should Great Britain in a century or so hence be without coal of its own, Canada will be quite willing to supply her with enough to keep the furnaces of her factories supplied with fuel. But it is possible coal will not be wanted in that day.

BICYCLE CONSOLIDATION.

THE majority of the leading bicycle manufacturers of the United States held a meeting in the Waldorf-Astoria, New York, to consider the consolidation of their business in a trust, to be capitalized at $80,000,000, under the style of The American Bicycle Company.

The deal was not finally completed, but from an official report given out by A. G. Spalding, of A. G. Spalding & Bros., New York, the leading promoter, the prospects are bright that the bankers who are underwriting it will bring into the trust the following firms: Bicycle manufacturers.—Pope Manufacturing Company, Hartford, Conn.; Westerly Wheel Works, and Gormully & Jeffrey Manufacturing Company, Chicago, Ill.; H. A. Lozier & Co., Cleveland, O.; A. G. Spalding & Bros., New York; A. Featherstone & Co., and Monarch Cycle Manufacturing Company, Chicago, Ill.; Crawford Manufacturing Company, Hagerstown, Md.; A. D. Meiselbach, Milwaukee; Wis.; Indiana Bicycle Company, Indianapolis, Ind.; E. C. Stearns & Co., and Barnes Bycle Company, Syracuse, N.Y.; Eagle Bicycle Manufacturing Company, Torrington, Conn.; Black Manufacturing Company, Erie, Pa.; Grand Radids Cycle Company, Grand Rapids; Acme Manufacturing Company, Reading, Pa.; White Sewing Machine Company, Cleveland, O.; Ames & Frost, Chicago, Ill.; Viking Manufacturing Company, Toledo, O.; Shelby Cycle Company, Shelby, O.; Fanning Cycle Manufacturing Company, Chicago, Ill.; Columbus Cycle Company, Columbus, O.; Fay Manufacturing Company, Elyria, O.; Geneva Cycle Company, Geneva, O.; Milwaukee Engineering Company, Milwaukee; Colton Cycle Company, Toledo, O., and the New Buffalo Wheel Company, Buffalo, N. Y.

Bicycle sundries.—American Saddle Co., Cleveland, O.; Hartford Rubber Works, Hartford, Conn.; C. J. Smith & Sons Co., Milwaukee, Wis.; Indianapolis Chain and Stamping Co. and Indiana Rubber Co., Indianapolis, Ind.; Cleveland Machine Screw Co., Cleveland; Indiana Novelty Co., Plymouth, Ind., and The George L. Thompson Co., Chicago., Ill.

The bankers who, in addition to financing the company, will have the selection of officers for the first year, desired an expression from the manufacturers as to whom they would recommend for the office of president and ten directors, and, at their request, a sealed vote was taken, which resulted in practically the unanimous choice of A. G. Spalding for president. The vote for directors had not been canvassed and was not announced. The meeting adjourned subject to the call of the chair.

AN EXCITED IRON MARKET.

Pig iron has been much excited in Great Britain during the past week, and the highest price of the year was paid.

In Glasgow, the closing prices were higher on Wednesday by 2s. on Scotch warrants, and 3s. higher on Middlesboro than Tuesday's initial figures. Compared with those of last year, Wednesday's quotations show an advance of 23s. 9d. and 27s. respectively.

VEXATIOUS CUSTOMS REGULATIONS.

ONE might almost think it was the special office of some one under all Governments in Canada to devise and draw up Customs regulations vexatious as it is possible to make them.

There have, of course, been occasions when the Customs Department has obviously been persuaded to create a regulation which, although in a covert manner, increases the duty on a certain article, and, consequently, increases the protection which a certain industry enjoys. But, as a rule, the vexation which a regulation causes is the result of a desire to make it as efficient as possible. Good intentions do not, however, always produce good results.

A man who does not know the bowsprit from the topmast, may, with the very best intentions, undertake to pilot a vessel along a dangerous shore or into an intricate harbor, but that does not condone for the loss of the vessel. The man might say that his intentions were of the best; but the court of inquiry would, none the less, ascribe the loss to criminal negligence.

Time and again it has been demonstrated that it was, indeed, "a novice in the trade" who drew up many of the regulations governing the importation of goods into Canada.

There can be no other conclusion, unless we accept the other alternative and ascribe it to ulterior design.

A regulation, like everything else, can only be judged correctly by its results. The vexations which have followed in the wake of some of the regulations now in force clearly reveal their character. We are reminded of this by a letter which lies before us. It is from a house in France, and here is what it says in regard to certain tariff regulations :

> Invoicing to your country will soon become a work of art, and will require a special staff to get through the work. We shall never, in the busy season, be able to make out all the documents required by a lot of small shipments. If we had 15 or 20 invoices to make out we should never have time to fill up Form "J" in every one * * * Form 6 is sufficient to scare us from making any consignments, especially as it must be written, printed or stamped on the invoice. Such a lot of red tape is not likely to increase business with your country.

The regulations referred to are instructions to exporters in foreign countries for invoicing goods to Canada. And we wish we only had the space at our disposal for their reproduction. The prolixness, to say nothing of the abtruseness of some of them is enough to make an exporter hold his breath, not "for a time," but for all time.

If an exporter in France, for instance, sells goods to Canada which come within the purview of the French treaty, he must use two forms described respectively as "F" and "J." Form "F" consists of 143 words, without taking into consideration the signature, etc., of exporter and the form describing the number, character, etc., of the goods. Form "J" is the form for entry under the general tariff of Canada, and, without signature, etc., consists of 65 words. The latter must be written on the face or back of the invoice. It must not be attached or pasted thereon. The former may be on a sheet and separately attached.

Form 6, which the writer of the letter from which the above extract was taken says is sufficient to scare him, is the declaration to be made by the foreign owner or exporter of any goods shipped to Canada on consignment, and contains 460 words, minus the signature of the exporter, the name of his place of business and the declaration of the notary or consul before whom the declaration was taken, or equal to about one column and a quarter of HARDWARE AND METAL. If the consignment comes under the French treaty, Form "F," already described, must be attached to, or written or printed upon, the invoice.

Both Forms "J" and "No. 6" must be written, printed or stamped on the face or back of the invoice. Is it any wonder foreign exporters are scared?

Form "P," which is the certificate prescribed to be written, printed, or stamped on invoices of all articles, except sugar, for entry under the British preferential tariff of Canada contains 178 words minus the "fill ins," which would materially increase the number.

It seems to HARDWARE AND METAL that if business commonsense were applied to the drafting of Customs regulations one form might be employed where four or five are now made to do duty, and that imperfectly.

Hon. W. Paterson, Minister of Customs, who has always exhibited a desire to make Customs regulations as reasonable as possible, will, it is to be hoped, give this matter his consideration.

SHIPYARDS FOR SYDNEY, CAPE BRETON.

The Dominion Iron and Steel Co., Limited, have located their blast furnaces, works, and ship-building yards at Sydney, Cape Breton. A square mile of land has been deeded them on condition that the company begin operations within three months and that they expend $3,000,000 within two years. The contract for the erection of furnaces has been awarded to Messrs. Riter, Connolly & Co., of Pittsburg, for about $2,500,000, within 18 months. This company has $15,000,000 in common stock, and is issuing $8,000,000 bonds at 5 per cent. Among those interested are H. M. Whitney, the president; H. F. Dinmock, and Almeric Paget, of Boston, Sir W. Van-Horne, R. B. Angus, James Ross, I. S. McLennan, of Montreal; Senator Cox and Elias Rogers, of Toronto; Senator McKeen, F. B. Pearson, Martin Dwyer, W. B. Ross, of Halifax.

POOR PARIS GREEN SEASON.

Dealers in paints and oils, both wholesale and retail, have, generally speaking, found the early months of this year most satisfactory ones.

About the only material that shows signs of dullness is paris green. Though this may mean that many retailers will be caught at the end of the season with larger stocks on hand than they wish to carry over, the cause is one that is rather pleasing than annoying.

There is a scarcity of potato bugs. Whether this has been caused by the severity of the past winter, or whether it is due to the voracity of the new bug-devouring insect that has been discovered in western Ontario, is not stated, but from all directions come the same report. Potato bugs are scarce, and their scarcity has resulted in a diminished demand for paris green. The potato bug is, however, reported to be developing in the Northwest.

GERMAN CUTLERY AND HARDWARE

Advices received in Toronto this week from Germany state that there will be a further advance in prices in all kinds of German hardware and cutlery. In cutlery, they talk of a further appreciation of 10 per cent.

TRAVELERS AND SALESMEN.

THE following is an extract from an address before The Southern Hardware Jobbers' Association by one of the delegates, a Mr. Barbour :

"A word about travelers and salesmen—concluding that you employ both—and I want to classify and make a distinction between your traveler and your local salesman. First, let me ask what constitutes a good traveler? From my standpoint, he should be an intelligent man—I do not mean he must be a college graduate, but a man of fair education, at least. He should be an excellent judge of human nature, because he will come in contact with a variety of different characters, and, if he is to meet with success, he must not be self-opinionated—he should endeavor on his first visit to study the customer ; if the merchant is engaged, wait until he is not busy before he shoves a card in his face. When the opportunity affords itself, he should approach him in the right way—not by commencing to criticize unfavorably some competitor's goods, but bring to the attention of the merchant intelligently the line of goods he represents ; he should not appear interested to his customer in some competitor's goods. It is always well for a traveler to keep posted himself in regard to competitor's goods, but never admit to his customer that he is ; he should talk from start to finish on what he has to sell. The traveler should always be a man of good appearance, well dressed, and, personally, myself, I look to see if he has on a clean shirt and collar and shoes well blacked. In my opinion there are many little things that go to the credit of the traveler if he only carries them out. Of course, it goes without saying, that he must be a man of good habits and not overextravagant. Now, the word "extravagant" I do not wish misunderstood—I am no believer in false economy—I want our travelers to always travel by the best route—I want them to stop at the best hotels, even if it costs a little more, and if they are traveling on daily expenses, I want them to be reasonable ; but the item of sundries we always strike out.

"Now, what shall we say of the local salesman? Many things which I have said of the traveler apply to the salesman, so for as the jobbing trade is concerned, but the situation is somewhat different. The salesman, being a local fixture, he must at all times be prepared to receive and attend to the wants of the merchants who visit the firm in whose employ he is. He, too, must be a gentleman in every sense of the word—pleasant, agreeable, never tiring, and if, after the merchant has finished his business with him, he can, in any reasonable way, assist him or do a favor for him, he may be sure the merchant will stand by him and fully appreciate it, and when he returns to the city again to make his purchases, rest assured, if the salesman leaves the right impression with him, and his name is Smith, the merchant will not be satisfied, if there is another clerk by the name of Brown, to have him wait upon him. The salesman wants to labor to get the merchant to think well of him—he should never deceive him, even if he could gain an order by so doing ; let the other fellow have the order if it is to be obtained by such methods, because he will get only one. When a salesman once gets the confidence of a merchant and he continues to do business with him on the square, never deceiving him in any way, every time that man or firm will stand by the salesman. In a nutshell, my idea of a traveler, as well as a local salesman, is that he must be a gentleman—a man of good habits, agreeable, straightforward, and honest."

TOWN LIGHTING WITH ACETYLENE.

The glory of acetylene is that every user produces his own illuminating gas. But, such is the supreme excellence of the new light that many towns, which now have expensive and inferior lights, are eagerly longing for the time when acetylene can be had instead. Possibly they can have it, and from central plants. According to the last issue of The Journal of Gas Lighting, London, the town of Olivia, near Dantzig, Germany, has been provided with an installation of plant for the public lighting of the place by acetylene. It has been arranged to have 2,000 burners, and consists of four generators of a total capacity double that of the burners used. The gas is conveyed in tarred cast iron pipes, having special joints, and valves at various points to allow of its division into separate sections. There are 96 public lamps. The service pipes resemble those used with ordinary coal gas. Wet meters only are used to record the consumption.

A NEW GALVANIZING BATH.

A substitute for the bath commonly used in the galvanizing of iron and steel is, says a German contemporary, made up of 84 parts tin, 40 parts spelter, 1½ parts lead and ¼ part aluminum melted together. The plates or other goods to be galvanized are cleaned and immersed in this bath in the usual manner. The deposit is said to adhere very strongly—in fact, so much so that plates so galvanized can be worked to any extent, and even heated to a red heat without injury.

THE BEAUTIFYING OF STORES.

ART GLASS IMPROVED.

MANY progressive business concerns in the cities and large towns obtain from decorative glass panels an artistic finish to their premises which is not without its telling effect upon the public. That this impression upon customers is of value to business is a point on which there is nothing but strong opinion.

The new style of art glass, known as electro-glazing—a specialty marketed by The Luxfer Prism Co., Limited, Toronto—has decided merits. The toughness of electrically deposited copper is resorted to in order to afford a panel which needs no disfiguring strengthening bars, and which has no cement to work loose with jarring. There is no bagging to the glass—a matter of much consideration. In cost, the improved glazing is practically the same as leaded work, and, therefore, in the end should be much cheaper, repairs being a remote contingency.

The Luxfer Prism electro-glazing lends itself to any class of design ; it may be said, in fact, that the more intricate the pattern the better this system is adapted for it. The glazing lines are much neater and finer than in any other, even the most expensive class of copper or German silver bar.

The Luxfer Prism Co.'s field in art glass is rapidly expanding, as it deserves—the latest installaion being in the new palatial steamer, Toronto, for The Richelieu and Ontario Navigation Co.

ST. RAYMOND, QUE., BURNED OUT.

The following merchants in the town of St. Raymond, Que., have been burned out :

Bertrand, A. D. M., general merchant, small insurance—Bourassa, B., general merchant, insurance $1,000—Duplain, F., tinsmith, no insurance—Duplain, P. J. general merchant, no insurance—Gauvin, P., tinsmith, no insurance — Leboeuf, P , harnessmaker and grocer, no insurance—Lesage, Louis, manufacturer cheese—Letarte, W., grocer, small insurance—Martel, Mrs. P , druggist. insured—Matte, Ulrich, general merchant, no insurance—Pelletier, H. & Frere, general merchants, insured—Piche, Nap., general merchant, fully insured—Plamondon, C. butcher—Proulx, F. X., tinsmith, no insurance—Rinfret, Mrs. Henri, general merchant, small insurance—Savard, Y. & Co., dry goods dealers.

CATALOGUES, BOOKLETS, ETC.

M'CLARY' STOCK CATALOGUE.

A complete and handsome stock catalogue has just been issued by The McClary Manufacturing Co., Limited, London, Ont. It contains about 315 pages, enclosed within covers of extra heavy cloth. The number of illustrations is legion, but the most striking and handsome are those of the enameled ware lines manufactured by the company. There are four full pages of these. The different enameled ware articles shown in these illustrations are in natural colors upon chocolate, stone, drab and grey back grounds. On these four pages are shown five different kinds of enameled ware, namely, two of ordinary, and one each of imperial ware, white ware, white decorated ware, and extra decorated ware. Then there are illustrations of stamped tinwares, pieced tinwares, japanned wares, copper and nickel wares, sheet iron wares, miners' and camping supplies, milk can and dairy trimmings, tinners' trimmings, wire goods, cast enameled wares, wooden wares, ice cream freezers, refrigerators, oil and gas stoves, besides miscellaneous lines. At the back of the catalogue are useful arithmetical rules and tables showing the cost of tin roofing per square, for finding circumferences when diameter is given, and for areas of circles. In addition to a most complete thumb index there is an ordinary index of five pages. The catalogue is a most useful one.

A PAINT FIRM'S POSTERS.

P. D. Dods & Co. are calling attention to their floor and liquid paints by issuing large and very attractive posters. The posters are done in two colors, and printed in both English and French. They are being sent to all their customers, besides being posted up in many public places, and should be the means of materially assisting the sale of their goods.

MIDSUMMER DAY LETTER.

The Canada Paint Company sent to its patrons, on Wednesday, this week, a midsummer day letter. It states that on account of the heavy business done in May, the total being in excess of any previous month in the company's history, some supplies could not be delivered as promptly as desired. As a result the company has decided to erect new buildings for the housing of its chemical color department, which addition will more than double its present capacity.

MARLIN SHOTGUN BOOKLET.

The Marlin Fire Arms Co., New Haven, Conn., U.S., have issued a ltle booklet containing samples of encomiums that users of the Marlin repeating shotgun have bestowed upon them. These booklets should be of great value in assisting the retailer to give customers an idea of the real value of this weapon.

MERIT AND GOOD FORTUNE

go hand in hand. Wherever you see success, there you may be sure to find merit also.

You can't build up a lasting success in business by trying to compromise between right and wrong, or between high quality and low quality. Stick unswervingly to right and to high quality, and you'll merit good fortune.

We've proved this to be true with the success of

THE SHERWIN-WILLIAMS PAINTS,

and our agents and dealers understand the commercial value of the success we have won. They know it comes from using every means at our command to perfect Prepared Paints—practical and chemical tests, machinery improvement, skilled labor, constant vigilance, honest methods, expert knowledge—all working to put quality first, to make practical paints better than anyone else could make them.

AN ANGLING SUPPLIES BOOKLET.

A unique little booklet has just been issued by R. & W. Kerr, fishing supplies, 2230 St. Catherine street, Montreal. It consists of 12 pages, counting the cover, and is printed in red and gold. The eight inside pages are a good deal smaller than the cover, and are of very thin white paper, while the cover is a light pale green and of thick paper. The object of the booklet is to advertise the fishing rods, salmon, trout bass and other flies which are included in the firm's list of angling supplies. But, what gives the booklet its particular uniqueness is a fly-hook with gut attachment neatly fastened to the front cover.

WIRE FENCING PRICE LIST.

The B. Greening Wire Co., Limited, have issued a new price list of their woven wire fencing, which they are willing to send to anyone sufficiently interested to ask for it.

THE COMING DAMPER.

The McClary Mfg. Co., London, have gotten up a neat little blotter describing their "Uncle Sam" damper, which they claim is the coming damper. The plate is stamped out of cold rolled steel, the stem of malleable iron and the handle of enameled wood. It is especially recommended for hot-air pipes. It is made in all sizes, from the 3 inch, which retails at 85c. per doz., to the 12-inch, which sells at $2.50 per doz.

CANADIAN PRODUCTS WANTED.

The following were among the inquiries relating to trade matters which have lately been received at the High Commissioner's Office in London.

A Scotch house desirous of extending their trade in jute yarns in Canada, ask for names of Canadian rope and twine makers and carpeting and mat manufacturers.

An inquiry has been received for a good manufacturer of dining-tables made from birch, spruce, and basswood, in quantities, and shipped in the white.

Inquiry is made for shippers of hickory suitable for golf sticks, in lengths of 44 inches by ⅞ inches square. The goods are required immediately for wholesale trade.

A London firm inquire for the names of shippers of fresh Canadian salmon (frozen), as they are in a position to take considerable quantities. They also ask for the name of a reliable shipper of fruit pulps.

An inquiry has been received through the medium of the Consul-General for Spain for the names of the principal fruit brokers in the larger Canadian cities.

Agents in the large centres are required for the sale of real Irish frieze ulster coats made by a firm in Ireland.

[Information in regard to any of the above items sent to the office of HARDWARE AND METAL will be forwarded to destination.—THE EDITOR.]

PAYING BILLS PROMPTLY.

IN these days of small profits and close competition it is surprising to note the apparent lack of regard shown by the average retailer for the payment of his obligations as they mature.

It is not unreasonable to presume that the majority of retail merchants have a thorough understanding as to the terms upon which they make their purchases, and yet, with that knowledge, they fail to adopt some simple and systematic method by which they would know each day what payments they would have to make. They seem to prefer to depend upon their general knowledge of what they owe and what is or will be due. A small yearly diary, or tickler could be obtained at a trifling expense, and, when bills are checked in as ready for payment, they could be entered upon proper date for discounting or for payment at maturity.

Notes or other items, such as taxes, interest, rents, etc., could also be entered therein. By this method a merchant would always have before him his maturing obligations and could make his calculations accordingly. Many jobbers and manufacturers would do well, also, to inaugurate and keep up such a system. The disregard of maturing bills and notes payable is not confined altogether to the retailers. There is perhaps some excuse in this respect for the retailer, on account of his lack of help and personal devotion to the other details of his business, and because in many instances he is bookkeeper, collector, manager, and everything else ; but for such neglect on the part of a jobber and manufacturer with the necessary help at their command there is no excuse whatever.

Merchants have their own ideas as to how they wish to pay their bills, but they have no right to say when they shall pay them. The terms of sale govern that feature of business.

Very few houses take an arbitrary stand and refuse extensions to a worthy customer, when asked for in a proper manner, but the idea is rapidly growing in the business world that the customer who persistently steals extra time and ignores the creditors' rights is entitled to no very great consideration. The retailer who permits his bills to go unpaid and who fails to arrange in a businesslike manner for the extra time wanted is standing in his own light, and is helping to compile a record of experience against himself that will work him more injury from a credit standpoint than by any other course of action short of downright dishonesty.

Be just and punctual ; be considerate and frank, and be systematic regarding details. Always remember that your creditors are your friends, and will more than reciprocate honest, frank and businesslike treatment from you in all matters of daily business life.—G. B. Pulfer.

The Cowan block, Portage la Prairie, Man., is the largest business structure in that town, but the increasing business of the occupants, J. & E. Brown, general merchants, requires more room, and it is probable a large addition will be built this year. The new building will be added on the north side, two storeys high, with dimensions of 75 by 35 feet.

TRADE IN OTHER COUNTRIES THAN OUR OWN.

THE heavy shipments of tinplates to Germany support the statement that an increase in duty is impending. This year, the direct shipments to Germany have been 10,000 tons, against 4,000 tons in the corresponding months of last year. The Liverpool market is moderately active, and a larger business has been doing in London lately.

NO DISCOUNTS TO JOBBERS.

The situation in the wire nail market is practically unchanged from last week. There is a slight falling off in demand, which usually occurs about this season of the year. The announcement by The American Steel and Wire Company of their intended withdrawal of cash discount has been the cause of a good deal of discussion among the jobbing trade, and many houses have expressed their disapproval of the change, as it will involve for the jobbers either a diminished profit on nails or the necessity of making their prices for these goods net cash. In view of this condition of things The American Steel and Wire Company intimate that they expect soon to make an advance in prices to cover the advance in raw material, and when they take this action they will make the difference between the jobbers' and the carload price 15c. per 100 lb. instead of 10c. as at present. This action indicates the desire on the part of the company to meet the views of the jobbing trade and to do what they consistently can to handle their products advantageously. Prices are firmly maintained at former figures.—Iron Age.

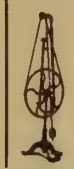
MATERIAL SCARCE IN FRANCE.

The consumption of iron and steel of all sorts is now proceeding at an unusually rapid rate, and merchants' stocks are getting quite depleted as far as regards the shapes and sizes most commonly in request, and even those sections which are not so generally required are finding purchasers, owing to the impression which prevails that the scarcity of all kinds of iron and steel will be greater as the season advances. To give an idea of the difficulty of getting material, it may be mentioned that The Fives-Lille Co. have actually been stopped at their work of erecting one of the sections of the great exhibition owing to the non-arrival of supplies. Old material, in sympathy with the scarcity of new, is rapidly appreciating in price, old rails now realizing at least 110f.

IMPROVED TINPLATE TRADE.

The tinplate trade continues to show signs of improvement. Last week the receipts from works amonnted to 75,500 boxes, but owing to want of tonnage only about 40,000 boxes were shipped, and stocks were increased to 175,000 boxes. Prices all round are very firm, and oilmen are buying largely at from 12s. 6d. to 12s. 7½d. for delivery over the next three months. A fair amount of business is also doing in Bessemer C 14 by 20 cokes, at from 12s. 3d. to 12s. 4½d. Wasters are moving off freely, particularly 18¾ by 14 sizes, which command 12s. 3d. per box. Unfortuneately the continental trade is causing some anxiety just now, it being rumored that Germany proposes to increase the duty on tinplates. Pressure is being brought to bear upon the Government by Sir John Jones Jenkins and other South Wales manufacturers to obtain some modification of the proposed imposts. On account of the increased prices obtainable for plates some of the tinplate-workers are agitating for the abolition of the 15 per cent. reductions which have hitherto been in operation, and in the Aberavon district notices have been issued at several works with the object of taking concerted action at the end of the month for the restoration of the 1874 list in its entirety.—Ironmonger.

A WEEK'S TIN TRADE.



This metal has advanced in price to the extent of ½c. per lb. in the New York market and £2 per ton in London during the past week. The two markets worked along with remarkable harmony, and the one potent factor governed both. The factor was manipulation by foreign operators, who have successfully nursed a short interest among London speculators, and received valuable assistance from the continued heavy consumption in the United States. That the rise was due in any manner to scarcity of labor at the sources of production, as stated by a contemporary, is very doubtful. In any event, statistics do not bear out the assertion. In this connection, we find that the shipments from the Straits Settlement, from January 1 to June 15 inclusive, were no less than 20,803 tons, against 21,596 tons during the corresponding period last year. It is estimated, moreover, that the quantity of tin in sight on January 1 for Europe and America was sufficient for over four months' consumption, which has been the average visible supply of late years. Another interesting statistical feature is in the fact that, while the visible supply was 24,800 tons a year ago, the prices for Straits tin were £69 10s. per ton in London and about 15⅛c. per lb. in New York, whereas the visible supply is now about 20,000 tons, and prices over £119 per ton in London and over 26c. per lb. in New York. In other words, the sup-

—— **ALSO** ——

a limited number of **Long New Snider Rifles.** These are **absolutely** new rifles never having been issued, and with each is the ordinary three cornered bayonet.

The quantities are limited. We solicit enquiries from the wholesale trade.

LAMPLOUGH & McNAUGHTON, Montreal.

ply has decreased less than 4 per cent. in 12 months, while prices have advanced about 70 per cent in the same time.

Prices on Saturday were variously quoted at from 26 up to 26¼c., according to quantity, but dealings were on a moderate scale, as is not unusual at the end of the week.—N.Y. Journal of Commerce, June 26.

STRONG IRON SITUATION.

The general scarcity of material continues, and is reflected in a further advancing tendency in prices for prompt delivery. The temptation of large and immediate profits in the operation of almost any plant is starting nearly every old blast furnace and rolling mill which never hoped to be productive again. Individually, these are not important, yet, in the aggregate, they are likely to tell very seriously, particularly when it is considered that important additions are being made to modern plants. It is true that their prospective product for the near future is being absorbed, but they introduce an element of weakness which the industry must count with.

How soon this pressure will develop depends largely upon general business conditions—which may hasten or retard it. It is a fact that, for the next few months, no marked effect need be apprehended, and that it looks as though the ore situation will prevent any serious decline until next spring.

In the meantime, every month sees the working off of old low-priced contracts. The average prices realized are beginning to move upward, and the profits are rolling in. How far the returns from current shipments are still below current prices is indicated by an instance which has come to our notice, a furnace company having realized $11.85 as an average for May, when it has recently sold as high as $17.—Iron Age, June 22.

THE DEMAND FOR AMMUNITION.

The volume of business now being done in arms and ammunition is both gratifying to dealers and profitable to manufacturers. Guns and ammunition is a large item in the hardware trade. Manufacturers are filling heavy orders for foreign markets. Consignments of war material of this class show a decided increase to South American countries as a result of the Spanish-American war. Orders have been placed in the United States during the last three months which would, in all likelihood, have gone to Europe a year ago. These orders came from such countries as the Argentine Republic and Chili, both decidedly pro-Spanish in character. Within four weeks Mexico has placed on order in New York City for 32,000 high-powered infantry rifles of American design and make. Two years ago Mexico arranged with the German Mauser establishment to outfit her entire army.—Iron and Steel, Chicago.

NEW YORK METAL MARKET.

PIG TIN—The strong position of the market was as pronounced as it has been at any time this month. Deliveries were fully up to the late average and made further impression upon the spot supply. The latter, according to some calculations, has been cut down fully 1,600 tons since June 1. London advices served to impart additional strength, since they quoted a further rise in prices. Buyers are doing nothing in this market that borders upon the reckless. The majority, for that matter, are still very conservative. As for speculation, there is none here outside of the manufacture of official quotations. In short, the strength of the market seems to have solid foundation. To-day's prices were about 26.10 to 26.15c. for 5-ton lots, and 26.20 to 26.25c. for single ton lots.

COPPER—Indications of a turn upwards in prices of Lake Superior ingot, that came to the surface on Tuesday, were more prominent yesterday. Bids of 17⅞c. were common, and there was more than a possibility that sellers at 18c. would have been relieved. In any event, none of the mining companies' representatives quoted less than 18¼c., and some placed their limit at 18½c. for either prompt or future deliveries. The demand is more active, not only for this variety of the metal, but for electrolytic sorts, and large sales of the latter have been made recently. Bars, etc., are quoted at 17¼ to 17½c. Casting copper is steady at 17 to 17¼c., and in very fair demand.

PIG LEAD—Operations were not remarkable, either for size individually or total amount of metal involved, but inquiries were more numerous and the undertone of the market stronger. Apparently prices would be moved higher but for the policy of the Smelting Company, whose interest might not be benefited by an advance at the present time. About 4.50c. was generally quoted for carload and 4.45c. for 100-ton lots here, and corresponding prices prevailed at Western points.

SPELTER—The depression in prices of this metal for July and later shipment has moderated somewhat, and it is doubtful if a lower price than 5.60c. delivered here, would now be accepted. This slight turn was attributed to better business in the West. Spot stock is moderate, as are offerings for near future delivery, and for these about 5.90 to 6c. are inside prices at the moment.

ANTIMONY—Regulus is very steady, at 10 to 11c., as to brand, and jobbing very fair.

TINPLATE—There is comparatively little new business at the moment, and the bulk of it is in small lots from store, with prices about the same as quoted for some time past. Deliveries by the A. T. P. Co. continue free, but are backward on many low-priced contracts.

IRON AND STEEL—There is not the faintest sign of reaction in the pig iron market. Consumers are getting considerable iron on old contracts, and are, therefore, inclined to go carefully about making new purchases. Such business as does take place is at stiff prices, however, and furnacemen seem to have comparatively little to offer for early delivery. All old material is very firm at late highest prices, and in quite good demand. On manufactured products there was a repetition of former reports, showing more or less activity in all lines and strong tone throughout, with prices the highest of the year.—N. Y. Journal of Commerce.

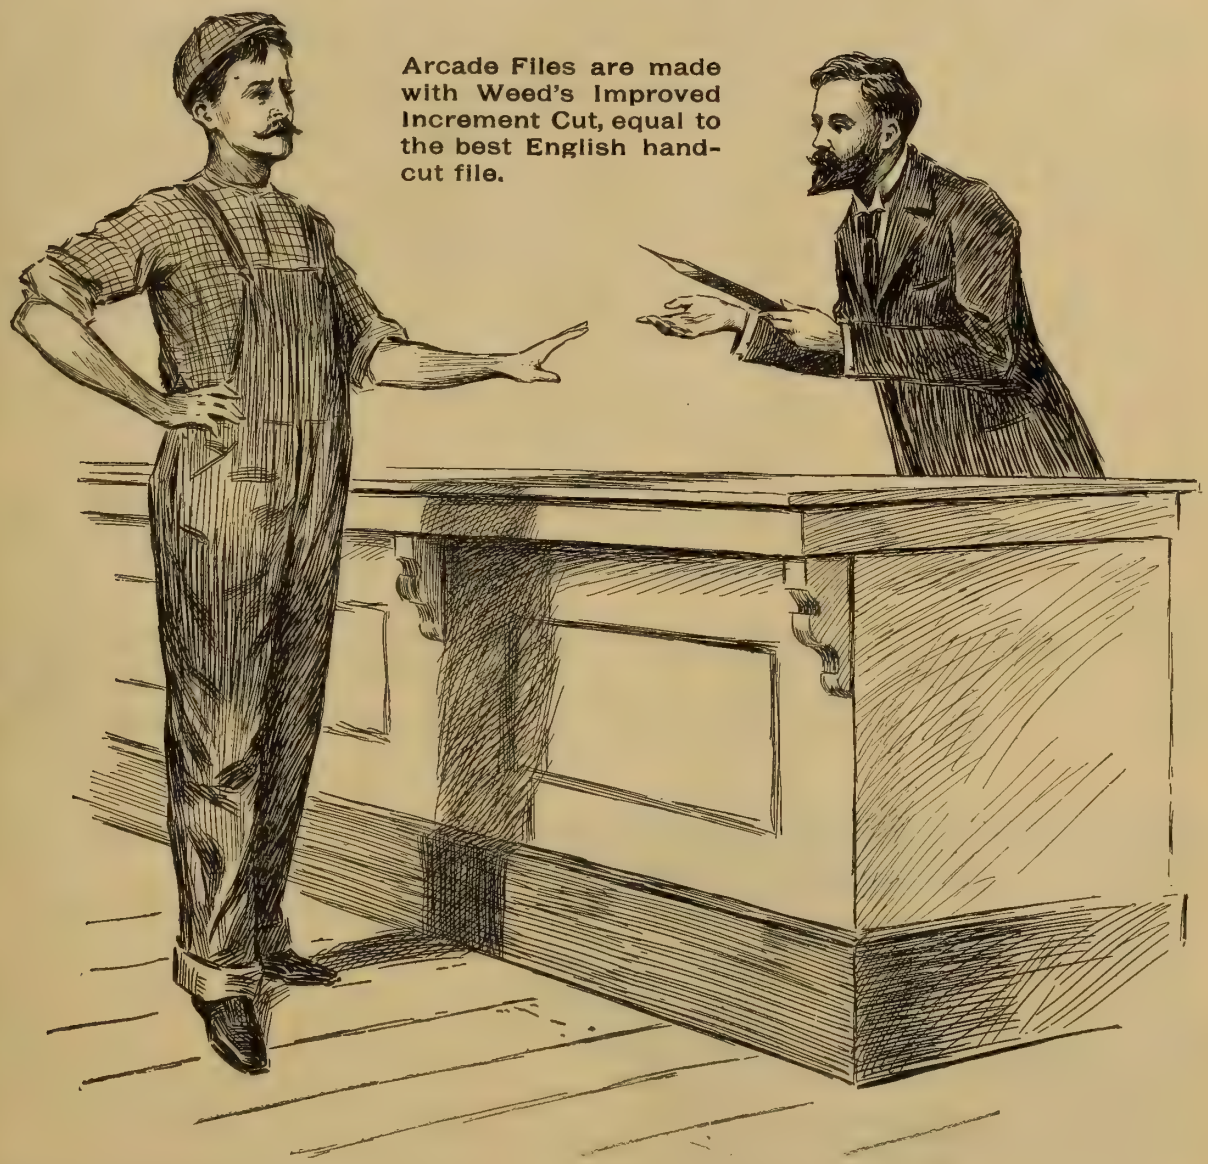
WHAT LED HIM TO THE WEST.

Mr. Goodfellow, one of the oldest merchants in Prince Albert, recently told a representative of HARDWARE AND METAL what led him to go West. While at his home in Peterboro', Ont., a missionary who was supposed to have just returned from the West, but in reality never was there, went through the county preaching about the good country, where there was very little to do, and a free and easy life. He said: "In Prince Albert you will find a mission where all are welcome. You need not knock on the door, but walk in. No one ever knocks on doors in that country. Once inside you will find people with open arms to receive you."

"We found the mission all right," said Mr. Goodfellow, "but it looked as if no one had ever lived there. Prince Albert hadn't much more than a Hudson's Bay post then. Now it is one of the towns of the West."

EXPECT TO BUILD SHIPS.

The Polson Iron Works, Toronto, have written to Mayor Shaw, of that city, stating that their firm, which now employ 220 men, 50 of whom are engaged at shipbuilding, expect to increase their staff by 200 skilled shipbuilders, and to engage in shipbuilding in an extensive way.



They state, however, that, owing to dredging in the bay, their slips have been filled in with mud, and that there is not deep enough channel for larger boats to approach their wharf with or for material, machinery, etc., and ask that the city defray the expense of dredging necessary to remove these objections.

MARKETS AND MARKET NOTES.

QUEBEC MARKETS.

MONTREAL June 30, 1899.

HARDWARE.

THERE has been a fair volume of business for the season in general hardware, and firmness is the rule throughout the entire list. Barbed wire rules quiet, while a fair movement is noted in smooth steel wire. Galvanized wire also is fairly active, and fence staples are in fair request. Both wire and cut nails have furnished a fair movement, and rule very firm. Horse nails and horseshoes are quiet. There is a good movement in screws, bolts and nuts, while cordage is firm at the rise last noted, and likely to go higher. Cement and firebricks are much the same.

BARBED WIRE — There has only been a quiet business in barbed wire, and prices are unchanged at $3 f.o.b. here.

SMOOTH STEEL WIRE— A good trade is noted in this line, and prices are firm at $2.60 f.o.b. factory points.

FINE STEEL WIRE — Unchanged, with discounts 25 per cent.

GALVANIZED WIRE — A good trade is noted in this line, and values are steady at $3 for No. 9.

BRASS AND COPPER WIRE—A fair business is passing in these articles. Discounts are 50 and 2½ per cent. on brass, and 45 and 10 per cent. on copper.

FENCE STAPLES—There has been a good inquiry for these. We quote: $3.05 for bright, and $3.65 for galvanized per keg of 100 lb.

OTHER STAPLES—As last reported. Discounts are : Cooper, 55c.; poultry netting, 45, and electrician, broom, bed, etc., 40 per cent. off.

WIRE NAILS — In active demand, and prices firm at $2.65 to $2.70 nett with miscellaneous nails 75 and 5 per cent. off list.

CUT NAILS—More inquiry is noted for these this week. We quote $2.15 per keg f.o.b. Montreal, Toronto, Hamilton, London and St. John, N.B.

HORSE NAILS—Business quiet and discounts unchanged, at 50 per cent. on standard, and 50 and 20 on Acadia.

HORSESHOES—Quiet, but firm. We quote: Iron shoes, light and medium pattern, No. 2 and larger $3.40; No. 1 and smaller, $3.65; snow shoes, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; XL steel shoes, new light pattern, No. 2 and larger, $3.65 ; No. 1 and smaller, $3.90; featherweight, all sizes, Nos. 0 to 4, $4.90 ; and toe weight steel shoes, all forward, all sizes $6 f.o.b. Montreal, St. John, N.B., and Halifax, N.S. Delivered f.o.b. in Toronto, Hamilton, London and Guelph 10c. per 100 lb. extra.

TACKS — Quiet. We quote as follows : Carpet tacks, blued or bright, for 6, 8 and 10-oz. assorted, $4 per gross, with 45 per cent. off; tinned do., $6 per gross with 45 per cent. off.

DOUBLE-POINTED TACKS—Remain unaltered: Discounts in dozens 85 and 10 per cent., and in bulk 40 per cent.

SCREWS—A fair trade is noted. Discounts are : Flat head, bright, 82½ and 5 per cent ; round head do., 75 and 5; flat head, brass, 75 and 5; round head do., 67½ and 5.

BOLTS — In good request and steady. Discounts are : Carriage bolts, 5-16 and smaller, 57½, per cent.; ⅜ and up, 52½ per

cent.; full square bolts, 67½ per cent.; machine bolts, 57½ per cent.; coach screw bolts, 72½ per cent., and sleighshoe bolts, 72½ per cent.

NUTS AND WASHERS — There is a fair inquiry for these. We quote: Square, 4c. per lb. with discounts off list, and hexagon, 4½c. Washers in 5-lb. boxes are 50 per cent. discount.

RIVETS — Trade is brisk in a jobbing way. Discounts now are: Black and tinned, 50 per cent.; ditto burrs, 45 per cent., while copper rivets and burrs are 35 per cent.

CORDAGE—There is little to report in this line, trading ruling fair. We quote: Manila, 11¼c. for 7-16 and up; 11½c. for ⅜, and 12¼c. for ¼ and 5-16. Sisal, 10¾c. for 7-16 and up; 11¼c. for ⅜, and 11¾c. for ¼ and 5-16. Binder twine: Pure manila, 10½c.; 550 feet, 10c.; sisal, 500 feet, 9½c.

SHOT—Without feature. 6c. for ordinary and 6½c. for chilled.

CEMENT — Trade is quiet and prices are steady. We quote: Belgian, $1.90 to $2.10; English $2.30 to $2.40, and German, $2.45 to $2.65, per cask ex wharf.

FIREBRICKS — In fair demand and firm at $12 to $23 per 1,000 as to brand.

METALS.

The firm feeling in all heavy iron and metals is as marked as ever, and prices do not even yet appear to have reached the top.

PIG IRON—No special activity is to note in this line, but prices are firm, $20.50 being asked for No. 1 Hamilton. Scotch pig is nominal.

BAR IRON—The movement, both from mill and stocks is active, and prices are firm at $1.90 for car lots.

BLACK SHEETS —There is a good trade doing in these. Prices are: 10 to 16, $2.25; 18 to 20, $1.95; 22 to 24, $2.15; 26, $2.25, and 28, $2.30.

HOOP IRON—There is a fair trade doing and we quote $2.45.

STEEL—In fair demand. We quote: Sleighshoe and tire, $2.50; spring, $2.70; machinery, $3, and toe calk, $3.

HORSESHOE IRON—Firm at $2.15 per 100 lb.

GALVANIZED IRON — An active trade is noted in this material. We quote: Queen's Head, $4.55 to $4.80; Comet brand, $4.30 to $4.55, according to the size of the order.

INGOT COPPER—Without change on spot at 19½ to 20c.

INGOT TIN—As last reported, with prices steady at 29 to 30c.

PIG LEAD—There is no change in lead, which rules stiff at $4.25.

LEAD PIPE — Steady. We quote: 7c.

for ordinary, and 7¼c. for composition waste, with 17½ per cent. discount.

IRON PIPE—There is no change to note in this line this week. We quote: Black pipe, ⅛ and ⅜-inch, $3.12; ½-inch, $3.09; ¾-inch, $3.72; 1-inch, $5.14; 1¼-inch, $6.82; 1½-inch $8.66, and 2-inch, $11.02. Galvanized pipe, ⅛ and ⅜-inch, $5.64; ½-inch, $6.64; ¾-inch, $7.41; 1-inch, $10.12; 1¼-inch, $14.03; 1½-inch, $17.16, and 2-inch, $23.

CANADA PLATES — An active business is doing in Canada plates. We quote: 52's, $2.25 to $2.30; 60's $2.35 to $2.40; 75's, $2.45 to $2.50; full polished, $3.10; galvanized Canada plates, $4.10 for 52's.

TINPLATES — There is a good inquiry for these. We quote: Coke, I.C., $3.50; charcoal, I.C., Allaway or Comet brands, $3.75; do. I. X., $4.50; Lincoln, $4; P. D. Crown, $4.25; do. I. X., $5.25; Bradley's, $6.05.

TERNE PLATE—In fair request at $6.25.

COIL CHAIN—Firm at the rise. We quote: No. 6, 10¾c.; No. 5, 9¼c.; No. 4, 8¼c., and No. 3, 7¼c. per lb.; ¼-inch, $6; 5-16, $4.75; ⅜, $4.25; 7-16, $4.10; ½, $4; 9-16, $3.95; ⅝, $3.85; ¾, $3.65, and ⅞, $3.55 per 100 lb.

SHEET ZINC—Quiet and steady, at 8 to 8¼c.

ANTIMONY—Steady, at 10 to 11c.

SPELTER—Without change from $7.

GLASS.

Trade in window glass has not been very active this week. We quote: First break, $1.80; second, $1.90 per 50 feet; first break per 100 feet, $3.50; second, $3.75; third, $4; fourth, $4.25; fifth, $4.75; sixth, $5.25, and seventh, $5.75.

PAINTS AND OILS.

There is little change to report in leads, business ruling quiet, but values are firmly held all round. In oils, castor oil, in a jobbing way, is firm at 7½ to 8c. Round lots of steam-refined seal oil are offering at 32½ to 35c., and in a jobbing way, 37½c. Pure, prime cod oil is lower at 35 to 37½c.

WHITE LEAD—Best brands, Government standard, $6.00; No. 1, $5.62½; No. 2, $5.25; No. 3, $4.87½.

DRY WHITE LEAD—$4.75 in casks; kegs, $5.

RED LEAD—Firm; casks, $4.75; in kegs, $4.50.

WHITE ZINC PAINT—Pure, 8c.; No. 1, 6½c.; in oil, pure, 9c.; No. 1, 7½c.

PUTTY —We quote: Bulk, $1.65; bladders, in bbls., $1.80; bladders, in cases, $1.95; in tins, $2.05 to $2.30.

LINSEED OIL—We quote: Raw, 57c.; boiled, 58c., five to nine-barrels, 1c. less, ten and twenty-barrel lots open, net cash, plus 2c. for 4 months. Delivered anywhere in Ontario between Montreal and Oshawa at 1c. per gallon advance and freight allowed.

TURPENTINE—One to four barrels, 61c., two to four-barrel lots, 1c. less, five barrels and over, open terms, the same terms as linseed oil.

MIXED PAINTS—Firm; $1 to $1.20 per gallon.

CASTOR OIL—Firm; at 7½ to 8c.

SEAL OIL—35½ to 37½c.

COD OIL—35 to 37½c.

NAVAL STORES—There is an improved demand for all lines, and prices show no change. We quote as follows: Resins, $2.75 to $4.50, as to brand; coal tar, $3 to $3.50; cotton waste, 4½ to 5½c. for colored, and 6 to 7½c. for white; oakum, 5½ to 6½c., and cotton oakum 9 to 11c.

PARIS GREEN—We quote: 250-lb. casks, 13½c.; 50-lb. drums, 14c.; 1-lb. packages, 15c.; ½-lb. packages, 16½c.; 1-lb. tins, 15½c.

MONTREAL NOTES.

There is a possibility that Montreal will have a smokeless powder factory in the near future, if the negotiations now going on between certain parties are brought to a successful termination.

ONTARIO MARKETS.

TORONTO, June 30, 1899.

HARDWARE.

TRADE is fairly good, although it is perhaps not as brisk as it was a week ago. Business during the past week has not been characterized by any particularly new and striking developments. Prices in shelf and heavy hardware are much as they were before. Manila rope is 1c. per lb. higher, the base now being 12c. per lb. Wire nails are in good demand, and a fair business is being done in cut nails. Horse nails are quiet. A fair trade is reported in galvanized and oiled and annealed wires. Cutlery is in fair demand; so are sporting goods. Green wire cloth, screen doors and windows and some lines of harvest tools are still scarce. A good many letter orders are still coming in and payments are fair.

BARBED WIRE—There is a little doing, and the price is unchanged at $3.25 f.o.b. Toronto.

SMOOTH STEEL WIRE — Trade is fair, particularly in oiled and annealed wire. There is very little doing in hay-baling wire. We quote $2.60 f.o.b. factory point.

GALVANIZED WIRE—Trade is fair. We quote: Nos. 6, 7, 8 gauge, $3.40; No. 9, $2.90; No. 10, $3.50; No. 11, $3.55; No. 12, $3.05; No. 13, $3.15; No. 14, $3.90; No. 15, $4.50; No. 16, $4 65.

WIRE NAILS — Trade is comparatively

JOHN BOWMAN HARDWARE & COAL CO.

London, Ont.

Just Received a large consignment of WINDOW GLASS per S.S. Sylvania and can fill all orders promptly.

brisk and prices firm at $2.65 base f.o.b. Toronto.

CUT NAILS — Trade is merely moderate in cut nails. The base price is unchanged at $2.15, f.o.b. Toronto, Hamilton and London.

HORSE NAILS — Trade is moderate and without special feature. We quote: Standard, oval head, 50 per cent.; Acadia, countersunk head, 50 and 20 per cent.

HORSESHOES — Business is still quiet. We quote f. o. b. Toronto, Hamilton, London and Guelph: No. 2 and larger, light, medium and heavy iron shoes, $3.50; snow shoes, $3.75; light steel shoes, $3.75; featherweight shoes, all sizes, $5. No. 1 and smaller, light, medium and heavy iron shoes, $3.75 per keg; iron snow shoes, $4.00; light steel shoes, $4.00; featherweight steel shoes, all sizes, $5.00.

SCREWS —A good business is still to be noted. We quote as follows: Flat head bright, 82½ and 5 per cent. off the list; round head bright, 75 and 5 per cent.; flat head brass, 75 and 5 per cent.; round head brass, 67½ and 5 per cent.; flat head bronze, 67½ and 5 per cent.; round head bronze, 62½ and 5 per cent.

BOLTS—The demand for all seasonable lines continues good. We quote: Norway bolts, full square, 67½ per cent.; common carriage bolts, 5-16 and under, 57½ per cent.; ditto, ⅜ and larger, 52½ per cent.; ditto, full square, 67½ per cent.; machine bolts, all sizes, 57½ per cent.; coach screws, 72½ per cent.; sleighshoe bolts, 72½ per cent.; blank bolts, 57½ per cent.; bolt ends, 62½ per cent.; nuts, square, 4c.; nuts, hexagon, 4½c.; tapping nuts, 60 per cent.; tire bolts, 65 and 10 per cent.; stove bolts, 65 and 10 per cent.

RIVETS AND BURRS — No new features have developed, trade still being good. We quote as follows: Carriage section, wagon box rivets, etc. (steel), 60 per cent. off the list; ditto (Norway iron), 55 per cent.; black M rivets, (steel) 60 per cent.; ditto (Norway iron), 50 per cent.; iron burrs, 45 per cent.; copper rivets, 35 per cent.; bifurcated, with box, $1.25; coppered iron rivets and burrs, in 5-lb. carton boxes, 30c. per lb.

ROPE—Prices have advanced 1c. per lb. in manila rope in sympathy with the outside markets. Sisal is unchanged. A fair business is being done in rope, although the demand is not as good as it was. We quote: Sisal, 7-16 in. and larger, 10½c. per lb.; ⅜ in., 11c.; ¼ and 5-16 in., 11½c. Manila, 7-16 in. and larger, 12c. per lb.; ⅜ in., 12½c.; ¼ and 5-16 in., 13c.; New Zealand, 9½c. per lb.; Deep sea line, 13½c. for water laid, and 14½c. for machine-made; hemp, 7 to 9c.; lath yarn, 8¾c. Clotheslines, 48 feet, 90c.; 60 feet, $1.20; 72 feet, $1.50; 100 feet, $2.

CHURNS—Business is fair. We quote as follows: Metal frame—No. 0, $3; No. 1, $3.20; No. 2, $3.40; No. 3, $3.75; No. 4, $4.50; No. 5, $5.90. The price of wooden frames is 15c. per churn less than the above. Terms, 3 per cent. off 30 days f.o.b. Toronto.

WRINGERS—Trade is still fair. We quote: "Leader," $60 per doz.; "Royal Canadian," $58; "Royal American," $48. Prices are all f. o. b. Toronto, Hamilton, Brockville, and Montreal. Discount, 45 per cent. Terms, four months, or 3 per cent., 30 days.

BUILDING PAPER--A fair trade is reported, and the supply is equal to the demand. We quote: Plain building, 28c. per roll; tarred lining, 35c., according to quality; tarred roofing felt, $1.40 per 100 lb.; carpet felt, $2.25 per 100 lb.

GREEN WIRE CLOTH— The Canadian factory has refused to accept fresh orders on account of the number it has still booked. The demand is still active and price unchanged at $1.75 per 100 square feet.

POULTRY NETTING—The demand is fair and prices firm at the recent change. Discount 50 per cent.

JELLSTONE.

We will have this in stock in the course of a few days, put up in 5-lb. packages (white and eight tints) at the same price as barrels.

Don't load up with inferior Wall Coatings at higher prices.

SANDERSON PEARCY & CO.

---- TORONTO ----

SPADES AND SHOVELS —Are going out in smaller quantities, although there is still a fair trade doing. Discount 40 and 5 per cent.

TOOLS—There is a good supply of snaths and scythes, but turnip hoes are scarce. The demand for harvest tools continues good. Discount, 60, 10 and 5 per cent.

SCREEN WINDOWS AND DOORS—Retailers are ordering every day, but jobbers are unable to get supplies. The scarcity is even more pronounced than it was.

CUTLERY — Some nice orders have been received the past week for general lines.

SPORTING GOODS—There is some business being done, but it is mostly for future delivery.

METALS.

The general tone of the metal market is firm. Local quotations on pig tin, certain brands of tinplate and on Canada plates are all higher.

PIG IRON — High prices are being maintained, and there appears to be no sign of a reaction. We still quote Hamilton iron at $18.50 to $19 at the furnace.

BAR IRON — Prices continue firm. We quote base at $1.90 to $1.95.

BLACK SHEETS—Prices are advancing in England, and higher figures are looked for here. We quote: 18 to 20 gauge, $2.60; 22 to 24, $2.70; 26, $2.80, 28, $3. Business is quiet.

GALVANIZED IRON—American galvanized iron is practically out of the Canadian market, and stocks in English iron are getting light.

COPPER—Trade is quiet in ingot copper, but a good demand is being experienced for sheets. Copper is more active and stronger in New York, and in London, England, prices are higher. Locally, prices are unchanged. Ingot is still quoted at 19 to 19½c. per lb., sheet 23 to 23½c., and bar at 23½ to 25c.

BRASS—Trade is decidedly active in sheet brass.

PIG TIN—The market is higher in both New York and London, and local quotations are 1c. above those of a week ago. The demand is only moderate. We quote 29½ to 30c. for Straits, and 30 to 31c. for Lamb and Flag.

TINPLATES—The English markets are higher, cables on Wednesday quoting 13s. 3d. to 13s. 4½d. for ordinary 14 x 20 Bessemer coke plates. Locally, there is a scarcity of stock in the standard sizes, and prices are 25c. higher, and we quote bright charcoal plates at $5.75 base.

CANADA PLATES — All dull and half-polished have been advanced 5 to 10c. Business is a little better than it was. We quote: All dull, $2.60 per box; half-polished, $2.65; all bright, $3.10 per box.

LEAD PIPE—Business keeps fair. We quote: Ordinary pipe, 7c.; waste, 7½c. Discount, 17½ per cent.

PIG LEAD—Only a small trade is being done in this line. We quote 4¼ to 4½c. per lb.

IRON PIPE — The demand continues brisk, and prices are unchanged. We quote as follows: ⅛ to ⅜ inch, $3.10; ½ inch, $3.25; ¾ inch, $3.80; 1 inch, $5.25; 1¼ inch, $7; 1½ inch, $8.75; 2 inch, $12; 2½ to 6 inch, discount 50 per cent. Galvanized pipe: ¼ inch, $6; ¾ inch, $7.50; 1 inch, $10.50; 1¼ inch, $14.75; 1½ inch, $18.50; 2 inch, $26.

RANGE BOILERS — Prices are fair and demand good We quote as follows: Galvanized, 30 gals., $9; 35 gal., $10; 40 gal., $11. Copper, 30 gal., $22; 35 gal., $26; 40 gal., $30; discount off copper boilers, 10 per cent.

COIL CHAIN—The market is firm at the recent advance. We quote as follows: ¼ in. $6.75; 5-16 in., $4.75; ⅜ in., $4.30; 7-16 in., $4.15; ½ in., $3.05; ⅝ in., $3.85; ¾ in., $3.75.

SHEET ZINC—Trade is more active, but prices are unchanged at 8¼c. for cask lots and 8½c. for small lots.

SPELTER—Very little doing. The recent decline in the New York market is thought to have touched bottom.

SOLDER—Trade is moderate. We quote: Half and half, 17c.; refined, 16½c.; wiping, 6c.

ANTIMONY — Prices are steady at 11 to 11½c. per lb. for Cookson's. Trade is quiet.

THE METALLIC ROOFING CO., Limited

1179 King St. West, TORONTO.

PAINTS AND OILS.

Local jobbers report that general repeat orders continue to keep business active. The demand for turpentine has picked up greatly in the past week, as retailers who were holding off in the hope of a drop have started to buy. The feeling, however, notwithstanding this increased business, is easy. A decline of 2c. goes into effect on Monday morning, July 3. Linseed oil is firm, and is moving well. Paris green is in fair demand at steady prices. Some small shipments of whiting have, to a certain extent, relieved the shortage noted in the last couple of weeks. White lead, especially the costlier imported brands, has been moving in large quantities lately. The sale of prepared paints, sundries, glues, etc., continues excellent for June. The prices of nearly all grades of glue have been advanced 1 to 2c. There is some talk on the market of an association to govern the price of varnishes, but, as yet, nothing definite has been done towards the formation of such an organization. We quote:

WHITE LEAD—Ex Toronto, pure white lead, $6.12½; No. 1, $5.75; No. 2, $5.37½; No. 3, $5; No. 4, $4.62½; dry white lead in casks, $5.10.

RED LEAD—Genuine, in casks of 560 lb., $4.90 to $5; ditto, in kegs of 100 lb., $5.15 to $5.50; No. 1, in casks of 560 lb., $4.75; ditto, kegs of 100 lb., $5.

LITHARGE AND ORANGE MINERAL—We quote: Litharge, 6 to 6½c.; orange mineral, 7½ to 8½c.

WHITE ZINC—Genuine, French V.M., in casks, $7 to $7.25; Lehigh, in casks, $6.

PARIS WHITE—We quote 90c.

WHITING — 55c. per 100 lb.; Gilders' whiting, 85c.

GUM SHELLAC—In cases, 24c.

PLASTER PARIS — Ordinary, $1.75 per barrel; New Brunswick, $2 per barrel.

PUMICE STONE—Powdered, $2.50 per cwt. in barrels, and 4 to 5c. per lb. in less quantity; lump, 10c. in small lots, and 8c. in barrels.

LIQUID PAINTS—Pure, $1 per gallon; No. 1 quality, 90c. per gallon.

SEAL OIL—Is quoted at 59 to 60c. per gallon, and yellow seal at 49 to 50c.

CASTOR OIL—East India, in cases, 9c. per lb. and 10c. for single tins.

LINSEED OIL — Quotations to outside western points are (freight allowed): Raw, 1 to 4 barrels, 57c.; boiled, 1 to 4 barrels, 60c. Prices in Toronto, Hamilton, London, are 1c. per gallon less.

TURPENTINE—We quote for outside western points, freight allowed, 1 to 4 barrels, 61c.; in less quantities than barrels, 5c. per gallon extra will be added and packages charged for. Prices in Toronto, Hamilton, and London are 1c. less than the above. Terms, net 30 days.

GLASS.

Business in window glass is quiet. A fair demand for ornamental and fancy glass is reported. A cable was received on Thursday by one house which notified it of a fairly large shipment of window glass which left Belgium last Saturday. This is the only shipment that has yet started for Toronto. Prices for present delivery are unchanged at the following figures: Star, first break in 50-foot boxes, $2, and in 100-foot boxes, $3.75; double diamond under 25 united inches, $6, Toronto, Hamilton and London; terms 4 months or 3 per cent. 30 days.

OLD MATERIAL.

Prices are unchanged, but holders of lorge quantities could get an advance of 2 to 5 per cent. on all iron scrap, and ½ to 1c. on copper and brass. We quote as follows: Agricultural scrap, 50c. per cwt.; machinery cast, 55c. per cwt.; stove cast scrap, 40c.; No. 1 wrought scrap, 50c. per 100 lb.; new light scrap copper, 12c. per lb.; bottoms, 11c.; heavy copper, 14c.; light scrap brass, 7c.; heavy yellow scrap brass, 9c.; heavy red scrap brass, 10c.; scrap lead, 2½c.; zinc, 3c; scrap rubber, 4c.; good country mixed rags, 65 to 75c.; clean dry bones, 45 to 50c. per 100 lb.

HIDES, SKINS AND WOOL.

HIDES Deliveries continue large. Prices are steady. We quote cowhides: No. 1, 8¼c.; No. 2, 7¼c.; No. 3, 6¼c. Steer hides are worth ½c. more. Cured hides are worth 9c.

SKINS—There is no change. We quote as follows: No. 1 veal, 8-lb. and up, 9c. per lb.; No. 2, 7c.; dekins, from 30 to 35c.; culls, 15 to 20c. Sheepskins are worth 90c. to $1, and lambskins, 25c.

WOOL—A stronger feeling is noted, causing an advance of 1c. Receipts are larger. We quote fleece at 13 to 14c., and unwashed at 8 to 9c.

PETROLEUM.

There is little doing. Prices are unaltered. We quote in barrels, Toronto, as follows: Canadian, 14c.; Sarnia prime white, 14c. Sarnia water white, 15c.; photogene, 15½c.; American water white, 16½c.; Pratt's astral, 18c.

COAL.

Prices for delivery this week are unchanged, but an advance will be made for July deliveries, the amount of which is not yet known. A fair business is reported. We quote for this week anthracite at Buffalo and bridges: Egg, stove and nut, $4.25 per gross ton, or $3.79 per net ton; grate, $4 per gross ton or $3.57 per net ton.

MARKET NOTES.

Coal will likely advance on Monday.

Terne plates are 25c. higher at $7 to $8.50.

Standard sizes of tinplates are 25c. per box higher.

Manila rope is 1c. per lb. dearer. Sisal is unchanged.

On Monday morning next turpentine will be reduced 2c.

Pig tin is quoted 1c. per lb. higher by Toronto jobbers.

All glues, except common and coopers', have advanced 1 to 2c.

THE DANGER OF AUTOCARS.

Fires on autocars are becoming rather frequent in France, according to an English paper. In fact, they are scarcely any longer looked upon as a novelty. The latest conflagration of the kind occurred one Saturday evening in the rue de Chartres, at Neuilly-sur-Seine, when a car belonging to Baron Merlin was destroyed. His attendant foolishly tried to fill the reservoir with petroleum without extinguishing the burners. The result was that the oil took fire and the carriage was completely destroyed in about 15 minutes, the flames rising nearly as high as the top of the neighboring houses. The loss entailed is about £400.

INCREASED UNITED STATES IRON PRODUCTION.

The Iron Age, in its monthly review of the pig iron production, says:

"Gradually, the preparations to increase output are telling, and the May production was larger, although the general fact is noticed that many furnaces are not doing quite as well as expected. Then, too, a considerable number have been forced to go out for repairs. The current month, however, promises to add a notable number of stacks to the productive list which have long been idle, while work is going on in connection with other plants which will bring them into line in July and August.

"The weekly capacity of the furnaces in blast on June 1 compares as follows with that of preceding periods:

	Furnaces in Blast.	Capacity Per Week. Gross tons.
June 1, 1899	220	256,062
May 1	217	250,095
April 1	205	245,746
March 1,	192	228,195
February 1	195	237,639
January 1	200	243,516
December 1, 1898.	195	235,528
November 1	196	228,935
October 1	192	215,635
September 1	186	213,143
August 1	187	206,777
July 1	185	216,311
June 1	190	225,398
May 1	194	234,163
April 1,	194	233,339
March 1	193	234,430
February 1,	184	228,338
January 1	188	226,608
December 1, 1897.	191	226,024
November 1	183	213,159
October 1	171	200,128
September 1	161	185,506
August 1	152	165,378
July 1	145	164,064

"The position of furnace stocks, sold and unsold, as reported to us, was as follows on June 1, the same furnaces being represented as in former months. This does not include the holdings of the steel works producing their own iron:

Stocks—	Jan. 1.	Apr. 1	May 1	June 1.
Anthracite & coke	402,260	229,907	205,125	167,260
Charcoal	104,315	82,056	79,002	65,642
Totals	506,575	311,963	284,127	233,335

"We are indebted to The American Pig Iron Storage Warrant Company for the following statement of stocks of warrant iron:

Stocks—	Jan 1.	Apr. 1.	May 1.	June 1.
Coke & anthracite	113,100	82,700	60,700	46,900
Charcoal	37,700	27,000	25,800	20,400
Totals	150,800	109,700	86,500	67,300

"In other words, the total reported stocks figure out a little more than one week's consumption."

MANITOBA MARKETS.

WINNIPEG, June 26, 1899.

HARDWARE houses report business as very good indeed ; remarkably so in fact. All lines of shelf and heavy hardware seem equally active.

The McLaughlin Carriage Co., Oshawa, Ont., have decided to open a branch in this city where they will carry a full line of all their goods. The branch will be in charge of Mr. R. McKenzie, Manitou, who will move to Winnipeg to take charge of the new venture. Mr. McKenzie is well and favorably known throughout Southern Manitoba, where he has done business for a number of years, and will no doubt prove a popular representative.

Several articles have advanced in price during the past week. Wire nails have advanced 15c. base and carriage bolts 7½ points. Boiled and raw linseed oil has also advanced 2c. per gallon.

Other prices remain as per last week's list :

MARITIME BOARD OF TRADE.

The annual meeting of the board of trade for the Maritime Provinces will be held at St. John, N.B., on August 16. Among the subjects suggested for consideration are :

1. The development of iron and steel industries.
2. Statutory conditions for fire insurance policies.
3. The proposed increase in marine insurance rates in connection with Canadian ports on the Atlantic coast.
4. Municipal taxation in the Maritime Provinces.
5. Tourist travel and the development of accommodation for summer visitors and their attraction to points of interest.
6. Encouragement of trade relations between Canada and the West Indies.

FOR SALE.

FOR SALE — BRANCH STORE — PLUMBING, Hardware, Stove, Furnace and Tinning Business. Established five years. Sales doubled in last year. Only store of its kind within ten miles. Reasons for selling—Have all the business proprietors care to see to at their main store. $3,500 stock and fixtures. Rare chance for business man. Address, H. L. WHEELOCK, Rock Island, Quebec. t.f.

MONTREAL and TORONTO.

Midsummer Letter

572 William Street,
Montreal, July 1st, 1899.

EMERGING from the pressure of the Spring Trade, we are constrained to set ourselves right with any of our clients who may feel that their orders during May were not filled as promptly as has been our custom.

The Spring trade became active from the 1st of February, and, though the increase of business was not marked, we kept pace closely until near the end of April, and our friends were never better served.

The business done in May was **in excess of any previous month in our history,** and every department was fit for the work, except the Color Making department, which, through unusual pressure, together with a heavy Paris Green season, had more to do than could be overtaken, and this led to some detention of supplies to other departments.

This congestion is now almost over, but, as a result of it, we have decided to erect new buildings for the housing of our Chemical Color department, which will more than double our present capacity.

This season's operations prove to us that **value is the best guarantee of success.** Our friends are appreciating this, and we confirm all guarantees already expressed in this connection.

To say we are grateful, gives but a faint idea of our appreciation of the support of the trade during the first part of 1899. The increase looked forward to for the year, as expressed in our New Year's letter, has been more than half attained in the six months ending May, and we have awarded a corresponding dividend to our representatives. We hope and expect to attain the remainder in due time.

Letter Orders receive quick despatch at the closest market figures, and we depend upon the continued steady support of all our clients for the Summer and Fall trade, assuring them of our best services.

THE CANADA PAINT CO., Limited

GURNEY'S EMPLOYES AT THE FALLS

THE Gurney Foundry Co., Limited, Toronto, must wish their customers were always as good to them as was the kind Providence which allotted them such a beautiful day for their excursion to, and picnic at, Niagara Falls on Saturday last.

At 7 o'clock, when the Chippewa started across the lake with a full boatload of excursionists, all agreed that better weather could not have deen desired. The sky was clear and the lake almost as bright and smooth as the nickel work on Imperial Oxford stoves.

Over 700 employes and their friends took in the excursion and picnic. Included in the number were Messrs. W. H. Carrick, general-manager, and T. B. Alcock, secretary of the company. The plumbing trade was represented by John Gibbs, Yonge street, and Bates & Robinson, Spadina avenue, and the stove trade by Wm. Thompson, of Gibson & Thompson, 435 Yonge street; Geo. J. Hooper, 1366 Queen east; J. S. Hall, 1097½ Yonge street; John Taylor, 799 and 801 Yonge street, and Ed. Westwood, jr., 633 Queen street west.

After a delightful sail across the lake and up the Niagara river to Queenston, the excursionists were transferred to the electric cars, and soon were winding their way up Queenston Heights, past Brock's monument, and along the shores of the Niagara. Though most of the party had taken the trip before, the beautiful panoramic view of the river from many points, the great, high cliffs, the whirlpool, the rapids, the falls, and the many other points of interest excited enthusiastic expressions of admiration from young and old.

When the cars reached Queen Victoria Park at the Falls, they contained a hungry party of excursionists; but the hotel accommodation there is excellent, and those who did not bring baskets were soon robbed of their hunger by one or another of the caterers in or near the park.

After dinner, a programme of races, etc., was run off, some of the events proving very interesting. The event of the day, however, was a baseball match between the employes of the Gurney and the O'Keefe firms. The game was at all times interesting, and at several stages served to arouse considerable enthusiasm among the sympathizers of the two teams. The Gurney team proved the better one, largely through the good work of its battery, winning out by a score of 18 to 8.

After supper, a large portion of the excursionists returned on the 6 o'clock boat, the remainder waiting for the later one. All arrived home in safety, however, fully satisfied with their day's outing.

HEATING AND PLUMBING

SELECTION AND CARE OF GAS FIXTURES.

THERE is probably no branch of the building profession that admits of so much ornamentation and lends so much to the interior decoration of a new building as that of gas and electric light fixtures, writes Wilbur L. Burgess, in Kansas City Architect and Builder. Yet, there is no subject so rarely touched on by architectural and building trade journals. Ornamental brass work for lighting purposes dates to the golden candlesticks of Biblical times. How often do we read or hear of some ancient candelabra selling for a fabulous price, not for any particular handiwork, but simply as a relic. The present generation goes crazy over the handiwork of a few generations past. But it is truly said that age makes architectural styles valuable. We are living in an age of finer workmanship than the world ever knew. I really believe that ornamental metal work for lighting purposes is yet in its infancy. More elaborate and unique designs are executed every year. Wrought iron is entering more and more into competition with brass for fixture work. For some purposes iron is more suitable than brass, especially when exposed to the elements or where flies congregate. When carefully wrought, black iron gives more character to a fixture than brass. Copper is used to a considerable extent for very fine work. It takes a very smooth finish, and, being softer than brass, is easier worked.

SELECTION OF GAS FIXTURES.

On an average, it only falls to the lot of an individual to select gas fixtures once in a lifetime. He is all at sea, and the more he looks the less he knows. Much must be left to the salesman. Same as in buying a suit of clothes, much must be intrusted to the honesty of the tailor. All gas fixtures, when new, look equally bright. The question with the buyer is how long will the goods retain their lustre. This question can be answered to a great extent by the salesman if he is familiar with his line. There are certain factories whose finish will remain bright almost indefinitely. There are numerous factories whose goods are most sure to tarnish within a few months. This is caused by an inferior lacquer used, and the method of applying. In selecting gas fixtures some judgment should be used in making a choice suitable for the surroundings. This is a matter which is usually neglected. How often do we see an otherwise well-appointed home with hideous-looking fixtures. A person will spend considerable money fitting up a home with elegant furniture and hang the most unsightly thing in the most conspicuous place in the room for a chandelier, forgetting that a gas fixture is as much in the line of furniture as a table, a couch, or a carpet. This is caused by so many people living in rented houses, where the fixtures have been purchased by the landlord, who does not have to live with the goods, and does not care how they look. A property owner who has houses to rent should take extra pains in keeping his property in an attractive condition, as property of that kind is scarcely ever vacant, and when it is vacant the gas fixtures and mantels are the only furniture in it which make it homelike. An individual building a home would not think of submitting the purchase of his furniture to the disinterested contractor, yet in many cases the owner has no choice as to the kind of fixtures that are put in.

As much depends on the placing of fixtures in position as on the goods themselves. All parts should be made to fit perfectly, so there will be no rattling. The keys should be thoroughly examined, to see that they are properly ground. The chandeliers should hang the proper distance from the floor, so a person lighting them will not have to strain himself to reach the keys. Where extensions are required, a new stem should be put in from the body of the fixture, and not pieced out from the present length. All connections should be cemented with gas-fitters' cement, and not stuck together with white lead, as is the usual custom with plumbers. All this requires time, but makes up in the appearance and wear of the goods.

A workman, in handling gas fixtures, cannot be too careful as to keeping his hands clean and free from perspiration and grease. In fact, a gas-fixture man must be neatness itself.

CARE OF GAS FIXTURES.

How do you clean gas fixtures? is a question that is asked the writer every day. My answer is, usually, do not let them get dirty or leave them alone. The neat housewife can hardly resist the temptation to scour them occasionally, as she does all other parts of the house at times. This is entirely unnecessary; in fact, must not be done. Brass gas fixtures and brass beds, etc., are not to be scoured. The brass is highly polished and then lacquered, and so long as the lacquer remains on the fixtures, the goods will remain bright. Any kind of scouring, or much rubbing is sure to destroy the finish. Sapolio, silver polish, alcohol, gasoline, vinegar, and all kinds of acids must be avoided, as they all tend to destroy the lacquer, and it is then a matter of a few days that the bright and cheerful goods are black and tarnished. The writer advises the use of a cheap grade of cotton flannel to remove the dust. Chamois skin is not very good, as it collects the dust and acts as a sandpaper to lacquer. But how do you remove flyspecks? is the next question. There is nothing that will remove flyspecks but to have the goods refinished. The lacquer is dissolved, and more lacquer will not make the metal bright any more than varnish will make a rough board smooth. The metal must first be repolished. To avoid flies is the requirement. Where flies are liable to congregate it is well to cover the fixtures during the fly season. In every well-regulated home there will be an occasional fly, and he is sure to light on the lowest point of the chandelier. A ribbon neatly tied on the lower part of fixture will attract the flies and save many specks from the fixture.

PLUMBING AND HEATING NOTES.

French & Healy, plumbers, Halifax, have assigned, and a meeting of their creditors has been called.

Emile Vermette has registered as proprietor of P. V. Parent & Co., plumbers, Quebec.

Building permits have been issued in Toronto to A. Malcolm, for a two-storey brich residence at 339 Crawford street, to cost $1,500; to Capt. J. P. Beaty, for a pair of brick houses at 1562 and 1564 King street west, to cost $5,500; to E. V. Ransford, for a two-storey mansard-roof brick house on Harvard street near Triller, to cost $3,000.

THE N. A. M. P. CONVENTION AT OTTAWA.

The Toronto and London officers of the National Association of Master Plumbers of Canada, and the delegates of the Toronto association, left on Thursday evening for Ottawa, to attend the convention in that city yesterday and to-day.

The executive met at 9 o'clock yesterday morning, and the convention proper was opened by President W. H. Smith, of London, at 2.30 o'clock in the afternoon.

Among the matters of interest to be brought before the convention are the organization of Provincial associations, the continuance of The Bulletin, and the appointment of a permanent secretary.

SEND for specimen copy of Phillips' Monthly Machinery Register, containing over 5,000 entries of new and second-hand machinery of every description. The oldest established and most successful medium in the world. Established 25 years for the purpose of introducing those who have machinery for sale, to those who wish to buy, has a circulation of about 50,000 copies per annum, all over the world, and is used for continual reference by a large number of firms. NEW YORK TIRE CO. - - Toronto, Ont.

PIRATING THE WORD "SHEFFIELD."

The movement initiated some little time back by the Cutlers' Company for the creation of a fund to protect the name "Sheffield" from fraudulent use by continental manufacturers is, I am pleased to hear, making satisfactory progress. It is only by concerted action on the part of Sheffield firms generally that anything effective can be done, as it is not reasonable to expect any individual maker to incur the trouble and risk of proceeding against offenders in foreign courts of law for checking an evil which vitally concerns the whole trade of the district.

In order to raise the wind the Cutlers' Company have issued a circular inviting subscriptions from local manufacturers. A sum of about £1,200 has already been collected in response to the appeal, so that there is now very little doubt that ample funds for fighting purposes will be forthcoming.—Ironmonger, London.

A NEW OIL AND GUANO FACTORY.

T. H. Wymonde, a capitalist from London, England, is in Vancouver in the interests of a large oil and guano plant which is being built on the Fraser river about three miles above Steveston, B.C.

These new works, which are expected to be completed and ready for operation when the new season opens next month, will give employment to about 100 men the year round and about 200 during the season. It will be fitted with modern machinery, etc., at a cost of $100,000. Seven tug boats and 20 large scows will also be part of the outfit of the plant. Mr. Wymonde claims that the advantages of salmon oil over the ordinary lubricating oil are many, and it is rapidly taking the place of the high price oil which has been in use in the past. It is also extensively used for making soap, cleaning dry goods and numberless other things which ordinary oil could not be used for.

SMEAD-DOWD SYSTEM IN TORONTO PUBLIC SCHOOLS.

Mr. Bishop, superintendent of buildings of the Toronto School Board has, in answer to an inquiry from Trustee W. S. Lee, prepared a report, showing the amount of money which has been expended by the Public School Board on the Smead-Dowd system in the school buildings, and recently condemned by the court as being contrary to the plumbing by-law. A summary of the report shows :

Total paid Smead, Dowd Co., on heating and ventilating contracts	$89,662 50
Total paid Smead, Dowd Co., changing dry closets to water carriage	1,809 75
Total paid Smead, Dowd Co., for general repairs to apparatus	1,484 43
	$92,956 68
Total paid to other contractors for changing dry closets to water carriage	$ 1,567 50
Total amount expended on the system to date...	$94,524 18

The "SAFETY"

ACETYLENE GAS MACHINE

manufactured by

The Safety Light & Heat Co.

DUNDAS, ONT.

What some of our friends say of us:

Gentlemen,—Referring to your inquiry, we have pleasure in saying that your Acetylene Gas Machine, after the season's run, has given us entire satisfaction. We prefer the light to either gas or electric light, and we are now satisfied that it is cheaper than either, while, with ordinary care, we consider it quite as safe as either.

THE B. GREENING WIRE CO., LIMITED, per S. O. Greening, Hamilton.

Dear Sirs,—The 15-light machine put in by you in my premises is perfectly satisfactory. I also find in lighting my store it is cheaper than coal oil. I would not have it taken out and do without it for twice what it cost.

Yours respectfully, GEO. R. HAWKINS, Seeley's Bay, Ont.

CURRENT MARKET QUOTATIONS

June 30, 1899.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices throughout the civilized world.** Executive Offices: **Nos. 346 and 348 Broadway, New York City, U.S.A.**

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying, and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world. Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by respectable and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence Invited.**

CAUSES OF FAILURE

In the Hardware Trade and How Avoided.

As long as there are failures, subjects that furnish information how to prevent them will always be timely. We have published, in pamphlet form, three admirable papers on the above topic, in which Over-Stocking, Expense, Capital, Credit, Discounts, Buying, etc., etc., are ably discussed. We will mail the whole three essays to any address on receipt of **10 cents**

HARDWARE AND METAL, Toronto

THE PRESS CLIPPING BUREAU

Reads every newspaper in Canada and clips therefrom all articles of a business or personal nature of interest to subscribers in this department.

Politicians can obtain from it everything the papers say about themselves on any subject in which they are interested. Business men learn of new openings for trade, pointers to sell goods, addresses of people likely to become buyers, tenders wanted, stocks for sale or wanted, reports of new industries or stores, etc.

Terms—$5 per hundred clippings: $40 per thousand, payable in advance; but a yearly contract will be found the most satisfactory.

We have also lists of firms in every branch of trade in the Dominion, the professions, club members, society, etc., and we are prepared to address and mail circulars or letters to these at any time.

"QUEEN'S HEAD" PAYS.

CANADA

Pays the consumer, because it always does his work and is as uniform as Iron can be.

Pays the dealer, because there is always a market for it, at a fair price.

Pays the maker, because he does an enormous trade and has no claims for defective Iron.

JOHN LYSAGHT, Limited
BRISTOL, ENG. MONTREAL.

Figuring Close?

It pays to figure *close* for your customer, provided it is the Safford Patent Radiator that you are going to install for him. Figure close—don't be afraid of the profits. The Safford pays a good profit, and, better yet, ***it absolutely cannot leak.*** No bolts, no packing, ***screw threaded nipple connections at every point.***

The Safford stands a pressure of 140 pounds to the square inch, yet it is light, durable, handsome, and fits curves, circles, angles. You can "figure close" on the Safford because you can be absolutely sure that it will give ***perfect satisfaction.*** It will advertise your business and your reputation too.

Established 1825 Important Decision relating to the Established 1825

HEINISCH

TRADE-NAME ON SHEARS, TRIMMERS, Etc.

The U.S. Circuit Court, Southern District of New York, Judge Townsend, has rendered a decision in the suit of "R. Heinisch's Sons Co. vs. Hermann Boker & Co."

"The Complainant is entitled to an accounting, and to an injunction restraining them from using the names 'Heinisch' or 'H. C. Heinisch' on its Shears, Labels, etc., and otherwise, in any way which will interfere with Complainant's enjoyment of the benefits of its Trade-name."

Referring to the above decision, we would respectfully state our determination to protect our rights in the premises and warn all persons against any imitation of our Trade-name.

WHEN WRITING ADVERTISERS PLEASE MENTION THAT YOU SAW THEIR ADVERTISEMENT IN THIS PAPER

COPPER AND TIN AGAIN ADVANCING

THE past fortnight has witnessed a very material appreciation in the price of those important metals copper and tin. During the latter part of May and the first half of June both lines exhibited a general downward movement from the high prices recorded during the winter and spring. Since June 21, however, there has been a steady advance from day to day in both metals, and, on June 30, copper in London was over £1 per ton higher than it was two weeks before, at £76 15s., while spot pig tin in London had advanced in the same interval almost £4 the ton, from £116 17s. 6d. to £120 15s. the ton.

In New York, the price of copper did not respond to the rise in London, but tin stiffened 30c. on Lamb and Flag to $27.25 and 95c. per 100 lb. on Straits to $26.65.

The highest and lowest prices on both metals since January 1, both in London and New York, show a pretty wide swing. In London, copper has ranged since the first of the year from £58 1s. 3d to £89 2s. 6d., and in New York from 13¼ to 19⅜c. At present prices, therefore, it still has good room for an advance before it recovers to top price of the year. Tin, since January 1, has swung from £88 5s. to £120 15s. in London, and from $19.70 to $26.55 in New York. In its case also, therefore, there is margin for still more recovery if prices are to touch the high figure of the year. Some close observers, however, consider it doubtful that they will do so, as the extreme prices were due in large part to excited speculation in both metals, which is certainly not in evidence at present.

Compared with the prices ruling at this time in 1898, Straits tin in London is costing over £50 per ton higher this year, and $11 per 100 lb. more in New York, while copper is almost £26 per ton higher in London, and over $6 per 100 lb. more in New York.

These remarkable differences in price are a forcible illustration of the relative standing of the metal markets this year and last. The outside situation has exerted little influence on spot values of either copper or tin in Montreal or Canada generally. This, however, is easily understood, inasmuch as the current prices of the metals have been held pretty high, Canadian jobbers not following the reaction outside to any great extent.

MERCHANTS' ATTITUDES TOWARDS COMPETITORS.

FAIR competition is the life of trade. There is no question about it. If there were no competition nine-tenths of those who are to-day successful merchants would soon die of dry rot.

Business men, as well as runners, only do their best when they have competitors pushing them.

In athletic events A does not scowl on B because he has essayed to become a competitor, for he knows that if there are not two or more competitors there will be no prize. He, however, runs, rows or swims his best in order that he may win the prize.

A business man should do his very best to win trade; but he should not scowl upon his creditors, treat them as if they had no right to an existence, and employ methods with a view to driving them out of existence.

Every man has a right to enter whatever vocation he believes himself to be best suited for; and no one has a right to say him nay.

The refusal to recognize this is the cause which produces such effects as cutting prices, false advertisements, indiscriminate giving of credit and other evils to which business is heir.

It is better to give your competitor a handshake than a kick.

REDUCTION IN LEAD PIPE.

A reduction in the price of lead pipe is announced, taking effect July 4.

The discount is now 20 per cent., against 17½ per cent., as before, an increase of 2½ per cent., and, of course, reducing the price by that amount.

The cause of the reduction in price is the competition of United States made pipe.

SANITARY PLUMBING AND THE NATIONAL ASSOCIATION.

IN the address of President Smith before the National Association of Master Plumbers, Gas, Steam and Hot-Water Fitters of Canada, at the Ottawa convention, is summed up the whole duty of those composing the trade of which the organization he presides over is the national representative.

While not overlooking the benefits that would accrue to the members of the plumbing and heating trades from a more perfect organization, yet, the central thought running through his address was perfect plumbing, and, consequently, perfect sanitation.

Mr. Smith intimates that there is a great deal of plumbing, which, as far as its sanitary conditions are concerned, exhibits criminal negligence. There is no question about that, and it is chiefly because there are men who call themselves plumbers who could not qualify even if they were examined in the rudiments of the trade. The only wonder is that more disease and death is not caused in the cities on account of bad sanitary plumbing.

More scientific and consequently more sanitary plumbing has been the burden of the national organization since its inception three years ago, and at each annual convention it has had a prominent place in the subjects up for discussion.

But the way is tortuous and beset with many obstacles. Consequently progress has been slow, and the ideal is still some distance off. At the same time, however, the plumbers are a great deal nearer it than they were before the National organization had its birth, while in the future they are likely to make relatively better progress than they have had in the past, for the association is emerging from the primary stage.

The pivot upon which the whole matter of sanitary plumbing rests is education.

A great many master plumbers realize the importance of sanitary plumbing, and recognize their own responsibility in the matter. This is particularly revealed in the councils of the National Association. But there are still some who do not, although such can hardly, even by courtesy, be termed plumbers. There is, then, education to be done here.

Then, there are the people, those to whom good or bad plumbing means a great deal, they need to be educated. And all the attention should not be devoted to educating the men and women of to-day, but efforts should be made to instill in the minds of the school children—the men and women of to-morrow—the principles and importance of sanitary plumbing.

When the people have been educated to the point where they realize that unsanitary plumbing is as dangerous as a cholera germ they will fear the one as much as they now do the other. Then, not only will they give their plumbing to qualified plumbers, but they will demand that proper sanitary laws be placed upon the statute book.

And such laws will only be efficient which, among other things, demand that those who do plumbing shall only be those who have passed a qualifying examination.

Mr. Smith said, in his address, that the doctor tries to kill the disease germ after it has been bred, but that the plumber abolishes the pest hole that breeds the germ. This is quite true, and emphasizes the necessity of plumbers as well as doctors being qualified for the work in which they are engaged. The accomplishment of this is the task to which the National Association of Master Plumbers has set itself.

VEXATIOUS CUSTOMS RULES.

The article in last week's issue of this paper in regard to the vexatious affidavits which exporters to Canada are compelled to make has attracted quite a little attention. In that article, it will be remembered, was an extract from an exporter in France in which strong exception was taken to the lengthy character of these regulations.

Since then HARDWARE AND METAL has been shown a letter from a Marseilles house, which, after acknowledging the receipt from their broker in Toronto of a copy of the Canadian Customs regulations regarding exporters' affidavits on invoices says: "We have taken note of what is required, and will in future write in extenso the whole humbug of form 'J,' but form 'F' must be given in French, as our Chambers of Commerce will not certify in foreign language."

It is to be hoped the Department is considering ways and means for simplifying and making less vexatious the invoice affidavits.

TORONTO'S BUILDING ACTIVITY.

A fair indication of the activity that is manifested in the building trades in Toronto is given in the returns of building permits during the first six months of the past four years. In 1896, permits to the value of $305,300 were issued. In 1897 they were $528,071; in 1898 the amount was $895,585, while for the first six months of this year, the value of those issued was $1,297,600, over four times that of three years ago. During the month of May alone $361,235 worth of permits were taken out, which is $56,000 more than for the whole six months of 1896.

The record for the six months is the greatest since 1892, the last of the boom years, but it is not yet nearly as large as 1891, when, in the months of April and May alone, permits to the value of $1,462,280 were issued.

With such conditions and prospects, it would be natural to look for good prices, but the contrary is the case. The bulk of contracts let, both this season and last, have been let at even closer figures than those ruling in the hard times years from 1894 to 1896.

BRITISH IRON FIRMER.

As a result of both speculative and legitimate demand iron values in Great Britain have recorded some striking changes during the past fortnight.

On June 21 Scotch pig iron warrants were 2s. 4d. below where they are at present, and Middesboro 4s. 3d.

At this writing the British iron market is firm at the rise, and now stands from 23s. to 28s. the ton above the prices ruling at the corresponding period in 1898.

The United States iron markets have not recorded any material variation in the same interval, for, with the exception of grey forge iron and billets, prices at Pittsburg stand precisely where they did a fortnight ago. The advance in the two exceptions mentioned has not been very extensive—billets are 25c. higher than they were, and grey forge $1.50.

ADVANCE IN EDGE TOOLS.

A NEW list has been issued by the Canadian manufacturers of edge tools. According to this list, there has been advance of 25 to 30 per cent. in such lines as carpenters', shingle, coach and wagonmakers' draw knives, chisels and sleeks.

The advance is the result of the increased cost of raw material.

ELECTRIC RAILWAY TRAFFIC IN CANADA.

Passengers to the number of 100,000,000 traveled last year on the electric railways in Canada, an increase of over 19 per cent. compared with the previous year, when the number was 83,811,306.

This is a most satisfactory showing, but the present year will be still more favorable, for there is a steady expansion of electric railway systems in Canada.

We have not the figures for 1898, but those for 1897 show that the steam railways in Canada carried in that year 16,171,338 passengers. It is interesting to note this by way of comparison.

COAL IS DEARER.

The price of anthracite coal for July shipment has been advanced 25c. per gross ton f.o.b. cars at Buffalo and bridges, the price of egg, nut and stove sizes now being $4.50 and of grate size $4.25.

The demand from all sections is very brisk, so active, in fact, that wholesale dealers are now nearly a week behind in their orders.

ADVANCE IN RIVETS AND BURRS.

Still another advance is announced in the price of iron rivets and burrs, the discount having, under date of July 6, been reduced to 45 per cent. on iron rivets, and to 40 per cent. on iron burrs.

TIRE AND STOVE BOLTS ADVANCE.

The discount on tire and stove bolts has been reduced, the figures now being 60 and 10 per cent., instead of 65 and 10 per cent., as a week ago.

The bolt market generally is firm, and in the United States last week there was a further advance in carriage and machine bolts and in log screws.

STRONG TURPENTINE MARKET.

The turpentine market has been more than usually interesting during the past week.

At the latter part of last week the price in Toronto was reduced 2c. per gal., the lower figures to go into effect on Monday. This left the figures at 58c. per gal. in the city and at 59c. Western Ontario points. This week, however, the market in the South has been excited, and advancing something like ½c. per gal. daily.

As a result of this prices were marked up the 2c. per gallon they had lost a few days before, and 1 to 4-barrel lots are again quoted at 60c, f.o.b. Toronto, and 61c. f.o.b. Western Ontario.

Stocks in importers' and retailers' hands are light, buyers having held off in anticipation of the usual summer decline in prices.

SOUTHERN EXPORTS OF PIG IRON.

The statement of shipments of iron from Alabama and Tennessee in the first five months of 1899 show a total of 605,919 tons, an increase of 85,821 tons over the corresponding five months in 1898. From the Birmingham district alone the shipments were 359,089 tons, an increase of 36,101 tons over 1898. The shipments of cast iron pipe for the first five months of 1899 were 67,882 tons, an increase over the first five months of 1898 of 14,093 tons. The exports of Southern pig iron in the period named were 83,989 tons, an increase of 28,704 tons over 1898. The export shipments of pipe in the same period were 7,785 tons.

In an interview with a representative of The Commercial at New York, J. A. Green, of Matthew Addy & Co., made the statement that foreign countries are actually begging for supplies of American iron. He said that letters from abroad, relative to orders for iron, were so numerous that his firm had adopted a stereotyped reply: "Iron exports will undoubtedly show a falling off from last year. But this fact reflects the increased prosperity of the industry rather than indicating that American iron manufacturers are losing their prestige abroad. The truth of the matter is that the domestic consumption of iron has reached such enormous proportions that exporting in record-breaking quantities is out of the question. Of course, this enormous domestic consumption cannot continue forever. When the mills and furnaces are able to accommodate foreign buyers, American iron exports will reach a record-breaking figure."

BALANCE SHEETS AND BALANCE ACCOUNTS.

By James R. Macdonald.

THE ultimate end of all bookkeeping being the elaborating of a balance sheet, or balance account, either of which purports to contain in itself a complete resume of all past detail, we consider the best method of treating this subject is to take a few representative balance sheets and explain their component parts. This system is different to that adopted in existing treatises on bookkeeping and to the way it is taught in schools. Nevertheless, it lends itself readily to the explanation of principles—a most essential point in any educational system. Another reason for adopting this course is that it immediately imparts the minimum knowledge of accountancy necessary to the conduct of a large business. In our day a high standard of excellence is attained in preparing these statements of accounts, but it should not be forgotten that this is the outcome of generations of experience and expediency.

WHAT IS A BALANCE SHEET?

A balance sheet is simply a memorandum containing the capital and liabilities of a business at a given date, together with the assets or funds available to satisfy these. It is usually stated in the following form:

A. B. & Co.

Balance Sheet as at 31st December, 1897.

Liabilities	£15,000
Capital	20,000
	£35,000
Assets	£35,000
	£35,000

From this it will be seen that a balance sheet is nothing more nor less than a statement of affairs at a given date, compiled from any data—not necessarily from book records. It is not a ledger account, or part of any bookkeeping system, but merely a memorandum containing figures based on the accounts—if such exist. Hence the term "balance sheet" (or statement) to distinguish it from a balance account as used on the continent.

Before going further it may be as well to consider—

WHAT IS A BALANCE ACCOUNT?

A balance account is a general account in the ledger, into which at a given date, the balances of all other accounts are transferred. Thereafter one obtains at a glance a kind of panoramic view of the financial situation of the business. For convenience, those items of receipt and expenditure, which relate to revenue, are collected into an intermediate account called the profit and loss account, and the balance of the latter only is transferred along with the others.

The following is the form of a balance account:

A. B. & Co.

Balance Account as at 31st December, 1897.

Dr.	
To Assets	£35,000
	£35,000
Cr.	
By Liabilities	£15,000
By Capital	20,000
	£35,000

WHEREIN DOES THE BALANCE ACCOUNT DIFFER FROM THE BALANCE SHEET?

First, the former is part of the bookkeeping system, while the latter is not.

Second, the same items are placed on opposite sides of each form.

Third, the "balance account" bears the symbols of an account proper with its "Dr. to" and "Cr. by," while the balance sheet should not.

Fourth, as regards the bookkeeping, where the balance sheet is adopted the books are "opened" for the new period by the balances brought down from the old, but where the balance account is in use the new accounts have to be "opened" by journal entry, because all ledger balances have been already cleared off to the balance account, and the latter itself balances.

These simple rules do not appear to be generally known.

The example we have given shows a balance sheet in its most rudimentary form. It is natural to assume that the parties interested in the business would require fuller information as to how their capital, liabilities and assets are made up. The sole art of framing a balance sheet consists in subdividing these three main divisions—capital, liabilities and assets—in such a manner as to show the salient features of the business. To what extent this should be carried is entirely a matter of judgment and experience. A few facts are readily grasped, while many tend to obscure the principal features.

Another important matter is to display the various items in an intelligent manner, so as to bring out their relationship to each other. A good method is to set down, first in order, those liabilities which have to be paid at an early date, and against this the funds which would then be available to meet them. Likewise with future liabilities, as far as possible. A statement so displayed offers useful information and looks symmetrical. It is perfect in substance if it contains all the liabilities, funds and capital of the business. Perfection in form is, on the other hand, only approximately attainable, because it is largely a matter of fancy, accuracy of principles, experience and practical knowledge of the business. The latter is, for all practical purposes, a minor matter compared with perfection in substance, which all may attain.

Two typical balance sheets are worth considering in detail—those of a private trading company and of a public limited company.

A. B. & Co.

Balance Sheet as at 31st December, 1897.

Liabilities—		
Bills payable	£10,000	
Current accounts	5 000	
		£15,000
Capital—		
A	£10,000	
B	10,000	
		£20,000
		£35,000
Assets—		
Cash in Bank		£ 3,000
Bills receivable		2,000
Current accounts		15,000
Stock		10,000
Freehold property	£15,000	
Less mortgage thereon	10,000	
		5,000
		£35,000

It will be observed that the subdivisions are so arranged as to bring out conspicuously the amount of each principal heading; and that in the nature of things, the total assets must equal the total capital and liabilities, if the business is solvent. If insolvent, the amount of loss, or deficiency, added to the assets must equal, or "balance," the capital and liabilities taken together.

In private firms any loss is deducted from the partners' capital, and any profit added on.

THE RAND EXPLORATION COMPANY, LIMITED.

Balance Sheet as at December 31, 1897.

Capital—		
Share capital—		
Ordinary	£350,000	
Preference	350,000	
Founders'	3,500	
	£703,500	
Reserve Fund	100,000	
Profit	425,000	
		£1,228,500
Liabilities—		
Bills payable	100,000	
Ordinary credits	140,000	
Dividends unclaimed	1,500	
		241,500
		1,470,000
Assets—		
Cash in bank	110,000	
Loans against securities	500,000	
Investments	840,000	
Ordinary debtors	14,000	
Office furniture	1,000	
Live and dead stock	5,000	
		£1,470,000

All balance sheets are reducible to the form of three principal divisions—capital,

WIRE NAILS
TACKS
WIRE

Prompt Shipments

The ONTARIO TACK CO.
Limited
HAMILTON, ONT.

liabilities and assets; although in the case of public companies it is not usual to do so.

Any observations on the best manner of displaying the various items in a balance sheet are equally applicable to a balance account. In either case the statement is simplified and more clearly explained by adopting the three division principle, hence our using it.

The various items composing the assets and liabilities in the above balance sheets are more or less explanatory. With the subdivision of capital, however, some debatable points are involved which we will now consider.

WHAT IS CAPITAL?

In the case of a private individual or trading firm, capital practically means excess of assets over liabilities. With a joint stock company, however, a little more discrimination is necessary.

Theoretically, and in the abstract, the same rule is true, although it is seldom used in this sense even by accountants, owing to the peculiar constitution of these companies. The term "capital," in connection with the public companies, is more often employed as meaning share capital. This, of course, is a more restricted application than the wider meaning, to which we may apply the term "actual capital."

Therefore, the actual capital of a corporation, as well as of a trading firm, is the excess of its assets over its liabilities. This admits of two subdivisions: (1) Share capital and (2) profit. The former may be split up into the different kinds of share capital, as preference, ordinary and founders', and the latter into:

(a) Reserve fund,

(b) Profit available for dividend, and

(c) Profit carried forward.

Share capital is regulated entirely by the memorandum of association of the company and any subsequent modifications thereof.

It should be noted that debentures, being of the nature of mortgages, come under the heading of liabilities, and not of capital.—Accountant's Magazine.

THE POINT OF VIEW

from which you look at a thing makes all the difference in the world. Even the clouds seem low when you get on the mountain top. But you never see them that way if you stay down on the ground.

So in business, from a low level, from the easy-going level, cheap paints and hand-mixed lead and oil seem good enough. But if you climb up to an S.W.P. height you can look down and see their true worthlessness.

It always pays to get a high view point. If you have been content with selling the cheap stuff or in pushing lead and oil, climb up, and work for something better from now on. It's not too late to begin. The highest point in paints has been reached by **THE SHERWIN-WILLIAMS PAINT**. Take your stand beside it.

One quality, one label, one price. These things pay.

REALISTIC WINDOW DRESSING.

A subscriber on the South Coast, whom I called upon recently, has dressed his window in a very realistic manner. Wishing to make a display of tennis, croquet, cricket and other sporting goods, he covered the bottom of his window with real turf on which a miniature set of croquet was fixed up. The arrangement was so effective as to arrest the attention of everyone who passed by. By judicious watering the greenness and freshness of the turf was easily maintained. The device entailed some trouble, no doubt, but the publicity it secured was ample recompense. If I am not mistaken, this same ironmonger had his window decorated on April 19 of last year with primroses, bunches of the pretty flower being given to each customer during the day. Oddly enough this dispenser of primroses is reputed to be a staunch Liberal, so that he could hardly be charged with making political capital out of the party emblem. —Ironmonger, London.

THE NEW STEEL COMPANY.

It is now almost a foregone conclusion that before long the entire plant of The Dominion Coal Company will be taken over by The Dominion Steel and Iron Company, and that the former company will cease to exist, except, perhaps, in name. From the day of the formation of The Dominion Steel and Iron Company, it has been a self-evident fact that the steel company could not exist without the coal company, and, as the same gentlemen were interested in both, it was apparent that some arrangement had been arrived at.

It now turns out that The Dominion Steel and Iron Company will take over the entire plant of The Dominion Coal Company with its property and franchises and that The steel company will give a guarantee to pay not less than 6 per cent. on the common stock of The Dominion Coal Company, and that they will also take care of the preferred stock and bonds of the latter corporation. That this is somewhat of a contract for the new steel company to perform is evident from the fact that the common stock of The Dominion Coal Company is $15,000,000, and of course this does not include the bonds or perferred stock.

The entire issue of the stock and bonds of The Dominion Steel and Iron Company has been subscribed, and the Bank of Montreal, the Canadian Bank of Commerce and the Merchants Bank of Commerce backing the gentlemen who have been named in previous issues, have undertaken to finance the scheme.

It is said that nothing will be done for some time as regards placing the stock of The Dominion Steel and Iron Company on the market, as, with a concern of such magnitude, it will take time to construct the buildings and get the plant in operation.

While the Canadian Bank of Commerce takes a block of the stock, those who are also interested include the loan companies in which Senator Cox, president of the Bank of Commerce, is interested.

DEPRECIATION IN MACHINERY.

IN fixing the amount set aside for depreciation, we are at once met with a bone of contention, writes Joseph Nasmith in Cassier's Magazine. Shall the fixed amount be deducted yearly from the original or depreciated value? In other words, shall the life of the machine be taken as the period during which its cost shall be provided for, or shall there be at the expiration of that time a residual value which is equivalent to an extended life? It is quite certain that every machine which is replaced has some residual value. The material of which it is composed is worth something, and to that extent the actual wiping out of its value in a given period is unjust. Generally speaking, however, the amount is not large, and may, in any case, be allowed for in making the calculation of the yearly allowance.

It may be fairly argued that the plan of deducting equal yearly instalments tells very heavily when the machine is worn and is less effective, while the deduction of a diminishing yearly sum depreciates sufficiently at the beginning, when the machine is at its best, and less after its working value is decreased. While this is true, it is purely a matter of account; and it is permissible to adopt the plan named only when the residual value at the expiration of the fixed period is only equal to that of the material.

For instance, if a machine be valued at £100, and is depreciated at 5 per cent. per annum on that amount, then, at the end of 20 years the cost is wiped out. If now the percentage be deducted only from the diminished value annually, then at the end of the time named there will be still 36 per cent. of the original value remaining. Now, it is obvious that no machine is worth at the expiration of such a term 36 per cent. of its original value, so that the method of computation named is of no value. If, therefore, the allowance is to be deducted from the depreciated amount yearly, then the rate must be higher at the beginning of the term than at the later period, and must, indeed, be on a diminishing scale throughout the whole period, in order to reduce the value to its proper level. On the whole, it is better and simpler, considering the purpose of depreciation, to deduct annualy a fixed sum from the original cost, so that there may be some period when the account will close.

CATALOGUES, BOOKLETS, ETC.

SPORTING GOODS.

Lewis Bros. & Co. are issuing, this week, their midsummer catalogue. It contains 56 pages, well illustrated, and treats of guns, rifles, ammunition and sporting goods. Copies of this are being mailed to the trade generally, but should anyone not receive a copy, a card to the firm will bring one.

HAMILTON BOARD OF TRADE.

The annual meeting of the Hamilton Board of Trade was held on Monday afternoon. The membership of the board was reported to be 167. The following officers were elected: Samuel Barker, president; John A. Bruce, vice-president; Charles Stiff, secretary - treasurer. Council — W. H. Glassco, M. Leggat, John Hoodless, St. C. Balfour, W. F. Findlay, John S. Hendrie, F. C. Fearman. Auditors—John Bell and Frederick H. Lamb.

Gilbertson's Galvanized Sheets

PATENT COMET BRAND FLATTENED

are suitable for all kinds of Galvanized work demanding uniform quality; being made of superior Siemens Steel, they will double seam either way of grain, are smooth, soft, and well galvanized, every sheet being carefully selected; weight and count of sheets per case fully equal to the best known brands imported, and cost less.

GILBERTSONS are the only galvanizers who not only roll all their Steel Sheets, but manufacture all their own Steel in their own Steel Works, thus enabling them to put a soft and regular quality of steel into their sheets, which is impossible for galvanizers who buy their steel in the open market.

GILBERTSON'S CORRUGATED GALVANIZED SHEETS—all sizes.
FLAT GALVANIZED SHEETS (not fluxed) for corrugating purposes.

"GILBERTSON'S" SIEMENS-MARTIN TINPLATES

are soft, extra well coated, noted for deep stamping qualities, and for canners of fruits, meats, and fish have no equals. Cost no more than brands not nearly as well coated, or of equal quality.

BRANDS: "Gilbertson's," "Parsons," "Pontardawe," "Lincoln," "Comet," "Regina," "Gwyned."

GILBERTSON'S TERNEPLATES, "Regina" brand.
IMITATION RUSSIA SHEETS—will not crack or scale. Pickled, cold rolled and close annealed.
SIEMENS-MARTIN STEEL SHEETS, close annealed, close annealed and cold rolled (flat and free from buckles), also pickled.
BLACK CEILING PLATES, "Comet" brand. Pickled, cold rolled and close annealed.
BLACK TAGGER PLATES. Pickled and close annealed.

Supplies carried by all wholesale jobbers In o ering please mention brands.

National Association of Master Plumbers of Canada.

FOURTH ANNUAL CONVENTION MEETS IN THE CITY OF OTTAWA—A REPORT OF THE PROCEEDINGS.

OTTAWA was on Friday and Saturday last the gathering place of plumbers representing nearly every Province in the Dominion. It was the occasion of the fourth n nual convention of The National Association of Master Plumbers, Gas, Steam and Hot-water Fitters of Canada.

Friday morning was taken up with the meeting of the executive committee, when reports for submission to the regular convention were prepared and routine business transacted.

The convention proper convened in Victoria Hall at 2.35 p.m. the same day, with President Smith, London, Ont., in the chair. Mr. Peter Racine, Ottawa, was sergeant-at-arms.

The first order of business was the appointing of a committee on credentials. On motion, Messrs. J. W. Harris, W. H. Meredith and Joseph Wright were unanimously elected to serve as the same.

After a short conference, Mr. Joseph Wright, on behalf of the credential committee, reported the following delegates :

MONTREAL.—P. C. Ogilvie, J. W. Harris, John Watson, Joseph Montpetit.
OTTAWA.—E. B. Butterworth, H. A. Knox.
NOVA SCOTIA.—Frank Powers.
VANCOUVER.—Joseph Wright.
TORONTO.—James Wilson and A. Fiddes.
WINDSOR.—W. Mansell.
LONDON.—J. W. Chambers.

On motion of Mr. Meredith the report was received.

These responded to the roll call :

W. Smith, president, London.
J. W. Harris, vice-president, Montreal.
W. Mansell, secretary, Toronto.
W. H. Meredith, treasurer, Toronto.
H. Higman, vice-president for the Province of Ontario.
E. B. Butterworth, Ottawa.
F. G. Johnson, Ottawa.
Gil. Julien, Ottawa.
H. Normand, Ottawa.
H. Foisy, Ottawa.
H. Brown, Ottawa.
G. Ross, Ottawa.
J. Montpetit, Montreal.
John McKinley, Ottawa.
Peter Racine, Ottawa.
Frank Powers, Halifax.
A. Fiddes, Toronto.
J. H. Wilson, Toronto.

On the call for comminications being made, the following from The Starr Iron Company, Limited, Montreal, of which L. A. Mongenais is manager, was read :

H. A. Knox, Esq., Secretary Master Plumbers' Association of Ottawa.

DEAR SIR,—We regret very much to be unable to accept your very kind invitation to attend your annual convention in Ottawa. For some serious matters our association has passed a resolution forbidding its members to attend your convention this year. Nevertheless, you can rest assured that our friendly relations with all master plumbers will be as good as ever, and we will in future do, as we have done in the past, all in our power to help your association. Please accept our sincere thanks.

On motion of Messrs. Wilson and Powers, the president was authorized to appoint a committee on resolutions, and he accordingly named the following : Messrs. H. Higman, J. W. Harris and J. H. Wilson.

PRESIDENT SMITH'S REPORT.

It gives me great pleasure to welcome you to this our annual convention, which, I trust, will prove interesting and beneficial to all, and while there has been no marked improvement in the condition of business or trade during the past year, our association has not suffered from the lack of increased membership. Those admitted to membership during the past year, coming from all over the Dominion, show that the interest manifested in advancing this, our chosen profession, is not local but universal. No special effort has been made to increase the membership of our association. The majority of the

APPLICANTS HAVE SOLICITED THE HONOR,

which would indicate a recognition of the standing of the association and the necessity for a united action to elevate and advance our profession. Our association has already been the means of accomplishing much good in diffusing a knowledge of the requirements for and the best methods employed in securing good plumbing, heating and ventilation, yet what has been accomplished sinks into insignificance when compared with the possibilities of an association like ours, with a membership embracing the leading men in the profession in all sections of the Dominion. A united effort on the part of each individual of our association will in time awaken the people and the Government to the fact that good plumbing, heating and ventilation are necessities and not luxuries, and will secure for us the same recognition and legislation that is accorded to other professions. And,

TO ACCOMPLISH THE GREATEST AMOUNT OF GOOD

to ourselves and others, it is desirable that we should avail ourselves of every opportunity to advance the interests of this association, and that, in electing officers and appointing committees, we should select those who can best fill the different positions and who are willing to devote a reasonable

amount of time to the affairs of the association. We should also endeavor to increase our membership by securing as members all who are eligible for such membership. This can be best accomplished

J. W. Harris, Montreal, President.

by the individual members in the different sections of the Dominion where they are located.

There can be no more important question before the National body than the purpose it should serve in its relation to its membership. With this question successfully answered the

DUTY OF EACH INDIVIDUAL

member is plain, when men decide to cooperate, when they agree to harmonize social or commercial interests, the very first thought is what valid excuse have we to offer for such an association? Is the object or purpose praiseworthy? Is it necessary to better social relations or business interests, as the case may be? Is there a principle of right involved which we can use as a basis of organization, and which the great public at large must respect? These are the thoughts which must come to men who found organizations based on social or mutual interests. I believe that the

TRUE PURPOSE OF AN ASSOCIATION

of master plumbers should be as follows:

1. To advance the cause of scientific sanitation. Why? Because plumbing and house-drainage are its most important department.

2. Its special object should be, therefore, a sanitary law which provides for the examination and registration of plumbing labor, and honest inspection. To secure such a law, public prejudice, or ignorance of its necessity, must be overcome. To do this there must be a plan formulated for the

EDUCATION OF THE PEOPLE.

To educate members, a pleasant association room in each city is essential, The room should be provided with maps, charts, blackboards; the library should consist of the latest scientific journals on house plumbing, drainage and ventilation, and there should be kept on file at all times trade literature for ready reference. To educate the people to realize the necessity of a plumbing law all literature should be issued by the association and distributed by its members to their customers and friends.

3. The chief object of the association should be to place the supply trade and the retail trade on a basis of mutual interest. Their interests are identical, and there should be hearty cooperation. And to my mind there seems no good reason why this cannot be accomplished if right methods prevail. To this end we must

ENLARGE OUR MEMBERSHIP

and improve the commercial credit of our members through open, honorable and cooperative business methods. When we build an association attractive enough to secure 95 per cent. of the purchasing power and reduce the risk of selling materials in our own ranks, we will command absolute trade protection without question; and, what is more desirable, respect. To overcome public suspicion and prejudice, we must by these methods

IMPROVE THE CHARACTER OF PLUMBING WORK.

There is no surer way to win the respect and confidence of the people than to reduce the death rate of cities and the expense of sickness, which is the result of, I might say, criminal sanitary neglect. An association of plumbers built upon, to my mind, the above broad lines, would become speedily a powerful factor in the country's best progress. Following out such a purpose, our annual gathering would become the occasion for scientific discussions and debates of great importance. Here, for instance, we have met in the city of Ottawa, which has, no doubt, been looking forward for months to this convention of master plumbers, believing that the deliberations of this convention will bring to them valuable information, aid and encouragement. What a disappointment it would be should we, as an association, organized to serve the purposes enumerated, fail!

Gentlemen, we make a sad mistake when we, as an association of master plumbers, refuse to interest ourselves in the great sanitary problems of the day.

WE MUST BE SPIRITED

and elevate ourselves; and I believe the greatest honor that can be bestowed upon a master plumber is to be a delegate to this convention.

I believe the plumbing industry is of more importance to the population than all the doctors they can manufacture, for the simple reason that the doctors try to kill the germ after it has been bred, while the plumber abolishes the pest hole that starts the life and gives it a chance to exist. For that reason I think that all master plumbers should protect their interests in every detail.

In conclusion, I trust that you will pardon me for the many suggestions I have made instead of a complete resume of the work accomplished by us during my term of office, but in my opinion it is better that the work we have accomplished should be given in detail by the different vice-presidents and members, particularly when the work is pretty well known by all present.

The report was referred to the committee on resolutions for consideration.

REPORT OF THE EXECUTIVE COMMITTEE.

Your committee have pleasure in submitting their annual report to the fourth annual convention, for the year ending June 30, 1899. Two meetings of the executive have been held as a whole during the year, the first taking place on the steamer returning from Quebec, July 1, 1898, and the second being held in the city of Ottawa on June 30 of this year. At the meeting on July 1, 1898, the first business of importance was the appointment of a sub-executive committee, which resulted as follows: William Smith, London; E. R. Russell, London; W. H. Heard, London. The questions of issuing a monthly Bulletin and employing a paid secretary were also discussed, but

DEFINITE ACTION

in relation to the same was left over for a future meeting. Subsequently, these matters, with several others, were taken up by the sub-executive, and dealt with as was deemed best in the interests of the association.

The publishing of The Bulletin was entered into by the sub-committee, a separate report of which will be presented by the editor.

Our president has been indefatigable in his efforts to organize branch associations in other towns and cities, the result of which he has already told you in his report. At the same time, we regret that much more work must still be done in this direction, and we feel more and more assured that this cannot be thoroughly accomplished without a permanently-employed organizing agent, and, as in our report of last year, we again urge the great necessity of specially considering this question at the present convention. We have pleasure in reporting that

SEVERAL DIFFERENCES

which arose between some of our branch associations and the supply men were carefully gone into by the sub-executive in conference with the officers and members of the Dominion Supply Association, in the presence of the complainants, last April, and were adjusted to the satisfaction of all parties concerned.

List in Accord.—The official Bulletin has contained the full list of manufacturers and dealers who are in accord, and whenever changes were reported to National headquarters they were made and announced in the issue following the notice. During the past year, we have taken from the list 11 names, for various reasons.

Official Bulletin.—The editor's report will give full information as to the success of The Bulletin, which was launched on its trial trip in November last.

Wm. Smith, London, Past-President.

Re Secretary.—You will remember that, at the Quebec convention, the question of

A PERMANENT SECRETARY

was discussed, but, no definite appointment having been made, Mr. Mansell was asked, and, after great pressure, consented to act again as secretary, but only pro tem., and until such time as the office could be filled permanently. At the first oppor-

W. H. MEREDITH, Toronto, Treasurer.

tunity, your committee looked around for a suitable man to relieve Mr. Mansell. It had been intimated that Mr. W. H. Heard, of London, was willing to act, and he was accordingly chosen, but declined. Mr. E. R. Russell, of London, was also suggested, but he declined. Before reaching this stage of affairs, several weeks had elapsed, and Mr. Mansell continued as secretary pro tem., and up to the present time he has done so, while Mr. Beel has performed the duties of the office:

On motion, the report was referred to the commmittee on resolutions for consideration.

SECRETARY'S REPORT.

In making this report I would first of all say that I did not anticipate twelve months ago to again have to make a secretary's report, as I was only elected to the office pro tem., and fully expected at the time that a secretary would be chosen soon after the Quebec convention. But the year has rolled by without such a choice being consummated—two names, however, having been brought by the president before the sub-executive successively, and elected, and each of them ultimately declining to act, for good reasons presumably.

Under these circumstances, though I have nominally held the office, I have not felt the same responsibility resting upon me as I otherwise would, and, as I

FOREWARNED THE CONVENTION

last year, the clerical part of the work has been done by someone else, viz., Mr. Beel, as it was utterly impossible for me to attend to the duties.

Re The Bulletin—This is a new departure in our work; it has been successfully floated, but, like any other new venture, requires all the support and care possible, and I regret that the members of the association have not made as much use of The Bulletin as they might have done. Members, and particularly secretaries of local associations, have in The Bulletin a splendid medium for keeping headquarters better informed from time to time as to the working and progress of the association in their particular vicinity, and I am sure the editor would be only too pleased to hear from any member upon matters of interest to all concerned.

Mr. Meredith, in moving the receipt of the secretary's report, said that the best thanks of the association should be tendered to him. "It was only because of the goodness of his heart that he consented to fill the position until the present time. May the Lord bless him," concluded Mr. Meredith amid laughter and applause.

Mr. Wright seconded the motion, and it was carried unanimously.

Secretary Mansell: "I thank you very much for your kind vote of thanks, but I hope you will succeed in getting someone to relieve me from the office for the coming year."

REPORT ON THE APPRENTICE QUESTION.

Your committee, having during the past year given the apprentice question earnest consideration, respectfully report that in their opinion apprentices, in the old acceptance of the term, no longer exist in connection with our trade, and that our trade is in this respect no exception from other trades and mechanical callings. As a rule boys are no longer indentured to masters for a term of years, and masters no longer feel any serious obligation in the matter of imparting a knowledge of their calling to the boys who are constantly passing through their shops, staying a longer or shorter period as may suit the convenience of either. The boy remains in the shop if it suits his convenience, and the master keeps him for a similar reason. True it is that in many shops boys remain to become men, but

THERE IS NO REGULARITY

or any recognized rule or law in the trade governing the matter.

The results are deplorable. A class of men are growing up without thorough training in the theory and practice of one of the most important businesses, dealing, as it does, with the most valuable asset of any community (its health). Modern methods have brought about this state of affairs, and without any remedy as yet being evolved. Years ago the different kinds of goods and fixtures required were made in the plumber's shop. Stocks were piled up during the slack season to be used when the rush came on. To-day the

FACTORY THE PRISON AND THE ASYLUM

do the work, and both man and boy are idle when outside work ceases to be pressing. The master plumbers and others interested in the welfare of the community and in the trade have endeavored to overcome the difficulty through the agency and with the assistance of the trade school. In the Dominion, as far as your committee is aware, there is only one plumbing school. That is in Montreal, and it is in connection with the work of the Council of Arts and Manufactures carried on under the auspices of the Government of the Province of Quebec. This school was begun some years ago, through the efforts of the Montreal Plumbers' Association. Although it has done good work, it is yet far from being efficient, and we regret to say that there is a

LACK OF INTEREST

in the matter. Your committee fails to see why the mechanic should not be as anxious to control the class of men who are to follow the trades as are the learned professions. The clergy, the lawyers, the doctors, the engineers, the architects, the druggists, etc., have all definitely defined rules as to the class of men, their studies and their qualifications, who are to enter and practise their professions. Why in this mechanical age the mechanic should be content to follow a go-as-you-please policy and fail to follow up and take the precaution our forefathers found necessary is more than your committee can understand.

AN EARNEST AGITATION

for the founding of mechanical colleges could not fail to be beneficial. It is certainly as necessary from the public health point of view that some care and attention should be given to the education and training of the plumbers as well as the doctor.

Your committee would suggest that, with a view to insuring young men putting in a certain amount of time regularly in the practice of the trade before claiming to be journeymen, that a

PRINTED FORM OF DISCHARGE

be issued by our association, stating that the bearer, besides having the necessary character qualifications, should be entitled to admission into another shop. Should he be discharged before fulfilling the full time allowed (say, 5 years), his next employer should endorse on his certificate the time he put in with him, and so on until the certificate showed that the

HOLDER HAD WORKED

as a helper or apprentice the number of years that may be decided upon as necessary. It would, of course, be necessary that no master take a lad from another shop unless he was possessed of a properly filled-up certificate of discharge.

Further, the plumbing and health by-laws of all cities and towns should contain a clause

FORBIDDING THE PRACTICE OF THE TRADE

by any journeyman unless he could show a certificate or pass a theoretical and practical examination proving his knowledge of the business.

In conclusion, we would urge upon our association the importance of this subject, and that it should at at once put the matter in practical working order. Anything insuring regularity would be a vast gain on the present lax methods.

[Signed] JOSEPH LAMARCHE,
J. W. HUGHES,
JOHN MOLL,
P. J. CARROLL,
JOHN WATSON.

On motion, the report was referred to the committee on resolutions for consideration.

JOSEPH WRIGHT, Toronto, Vice-President for B.C.

REPORT OF OTTAWA ASSOCIATION

I am happy to report that the local branch is one of the soundest in the country. We have black sheep, but they are not allowed to hinder us in the least. Our objects are too important to be forsaken

because of the inattention of a few. Those whose minds are weakened by individual competition are neither desirable nor worthy men to strengthen the bonds of organization. We have tried to stimulate and strengthen their intellectual power; but, alas!

H. A. KNOX, Vice-President for Ontario.

we found them incurable, and our attention is now directed to men who know their opportunities.

We are stronger than last year, by the addition of two members. Consequently we have more representation at the convention.

The evils we have to contend with vary: By-Law No. 1358 of this municipality, for regulating plumbing and inspection, is not enforced, because no inspector exists, uniformity is displaced by confusion, etc., and the results are disastrous all round. The carpenter, the bricklayer and the householder has each his own standard of what is good and what is bad in sanitary and plumbing work. The plumber is not, in many cases, accepted as an authority on his work. The architects, too, are deprived of their just heritage owing to weakness and apathy. What we need badly is the operation of the by-law. Intelligent, skilful and alert workers will then be brought into the ranks. More discrimination ought also to be exercised in selecting boys for the trade.

In our humble opinion, if the reforms we are seeking were sought for by other locals, the association would be a moral, intelectual and financial giant.

H. A. KNOX, Secretary.

On motion of J. W. Harris the report was adopted.

OFFICIAL BULLETIN REPORT.

As you are no doubt aware, the adoption of a journal to be published in the interests of your association was discussed at the Quebec convention, and left over to your executive to be dealt with. After going into the matter carefully, the publication of a monthly journal, entitled Official Bulletin, was decided upon, and the first issue appeared in November, 1898, under the editorship of the undersigned.

A statement is here appended showing the receipts and expenditures in connection with The Bulletin during eight months ending this present June 30. From a reference to this statement it will be seen that the entire expenses of publishing the journal, including also sundry small payments to the editor for secretarial work done by him, were covered by receipts from advertisements, including a surplus from The Bulletin of last convention, and some $15 received from private subscriptions towards the initial expenses. By this it will be seen that the association has not been put to the cost of one single cent in the promoting of this new and important departure of work. After the experience of the past eight months, however, it is evident that to efficiently carry on the publication of this journal it should receive some small financial assistance from the association, as the advertisements alone, so far as already obtained, do not fully pay expenses of publication and secretarial remuneration. A reference to the advertising matter in The Bulletin will show that it is not as largely patronized by those whom the Association patronizes as was anticipated. Why, it is difficult to say—certainly not for want of soliciting.

Circulation—The Bulletin, as far as is known, has been sent to every master plumber, gas, steam and hot-water fitter in the Dominion. Possibly here and there some may have been omitted, but not intentionally. In its silent way, the Bulletin has not been unsuccessful, a canvasser having secured applications for membership to the association in each of the following places: Calgary, Port Hope, Sherbrooke, Guelph, Hamilton and, probably, others indirectly.

Before closing this report, I would just like to say that, perhaps, because the journal was a new venture, members did not avail themselves of its columns as they might. Though it has not reached the enviable position of being able to pay for literary contributions to its columns, on the other hand, no charge is made for inserting such.

All of which is respectfully submitted,

J. PASCOE BEEL.

The report was referred to the committee on resolutions.

VICE-PRESIDENT HARRIS' REPORT.

One year has already gone since I had the honor to be elected vice-president of your association. In submitting this report to your consideration, I will confine myself to a few suggestions which I think will be of general interest, and more especially the following:

I may state, in the first place, that, although the dealings of this association with manufacturers and jobbers during the past year have not been as satisfactory as we would like to see them, I am glad to say that the feeling between us and them is growing better every day.

There are many things to be done yet to better our SITUATION WITH MANUFACTURERS AND JOBBERS, things that I could not mention in this report, but would suggest that a special committee of three be appointed by this association, with full power to confer with a committee of manufacturers and jobbers on any subject that may be of interest to our association, or both associations. That committee should meet at least every three months and make a report of their doings after each meeting to the executive committee.

There is another feeling which I would like to see in existence in our association, that is to have all the members who belong to our society taking an active part in its doings and treating association matters as they would treat their own. Let us

LOOK AT EACH OTHER

as good neighbors do, and then, instead of losing a year or two in going to the Klondyke for gold, we will find good money within a few steps of our door. For that purpose, let us stand to each other and have good members. Then will be the time for us to publish in the papers that we have discovered a gold mine which will benefit the public at large as well as the plumbers.

The report was referred to the committee on resolutions.

REPORT FOR THE PROVINCE OF NOVA SCOTIA.

As your annual convention is near at hand, and, as you appointed me vice-president for Nova Scotia, I think it will be necessary for me to report upon the work done during the past year in our section of the country.

In the first place, I might say that our local association, which takes in Prince Edward Island, is in very good form. The majority of the members take an active interest in the good work which, as you know, is half the battle. We have about

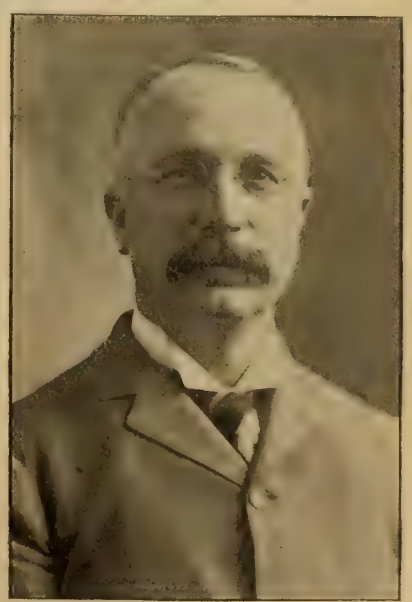
TWENTY-SIX MEMBERS

in good standing, which I think is a very good standing for Halifax and vicinity.

There is another matter I would like to say a word about, and that is that we

DO NOT RECEIVE ENCOURAGEMENT

from headquarters. An occasional letter from the heads of our Dominion Association would let us know that we are not simply local, but that we are a part of the Dominion Association and backed by men that are ready to stand by us in any reasonable cause.



I see by the report of our last meeting, held in Quebec, that the committee appointed to consider the question of appointing a permanent secretary reported in favor of engaging one, which I think would be a move in the right direction, for I consider the work in connection with association matters takes up so much of our secretary's time that he should be paid for it.

In conclusion, gentlemen, I must express my regret in not being able to attend the convention, but wish it every success.

GEORGE H. PERRIER,
Vice-President representing Nova Scotia.

A DISCLAIMER FROM MR. SMITH.

President Smith said he felt the report was a personal reference to himself. "I

FRANK POWERS, Lunenburg, N.S., Vice-President for N.S. and N.B.

am sorry," he said, "that I have not the ammunition here to show that there are some misstatements in that report. I keep

copies of the letters I write, but I have not the copy book here. I have written letters to the Halifax Association, and when I return home I will look up these letters. If I have not done my duty I should be censured, but if I have done my duty some one has got to pull in his horns." (Laughter.)

Mr. Beel said he had written letters to the Halifax Association, and had received no replies.

Mr. Wright said that while president he had written three or four letters to Halifax, and had received one reply.

Mr. Powers: "I am not living in the city of Halifax. I am about 150 miles away, so I cannot say whether any letters have been received or not."

Mr. Mansell: "I think we should not make too much of matters of this kind. During the past year I have written about 500 letters, and have only received replies from about 5 per cent."

The report was received and referred to tbe committee on resolutions.

Some one having remarked that auditors had not been appointed, on motion of Messrs. Watson and Powers, Messrs. Joseph Wright, J. W. Chambers and E. B. Butterworth were elected to perform the duties of same.

REPORT FOR THE PROVINCE OF ONTARIO.

As vice-president for Ontario, I beg respectfully to submit my report for the year ending June 30, 1899. During my term of office, I have written several master plumbers in the cities and towns of the eastern part of the Province, doing my best to induce them to join the nearest local association, with great hopes, in many cases, of their doing so, or of forming local associations where three or more master plumbers are established. But it is

A GREAT SURPRISE

to me that so many bright and intelligent master plumbers still hold back from joining the association. When it is so evident that, if we wish to attain the high position we are entitled to, every master plumber should join the association.

The members of the Ottawa association are doing their best to help the good cause along. This year, we tried to get the city council to pass a plumbing by-law, with the hope of having a plumbing inspector appointed, but did not succeed at the time, but hope to in the near future. In fact, a

PLUMBING INSPECTOR IS BADLY NEEDED

in Ottawa, in the interest of the public health and for raising the standard of the plumbing trade generally.

We have had two cases of wholesale firms selling to consumers here in Ottawa, which were referred to the executive to deal with, which had the desired effect.

In conclusion, I take great pleasure in thanking the officers and members of the Master Plumbers' Association for their uniform kindness during my term of office.

JOHN HIGMAN,
Vice-president for the
Province of Ontario.

Report was received and referred to the committee on resolutions.

A RESOLUTION OF CONDOLENCE.

Secretary Mansell: "I have, Mr. President and gentlemen, a sad duty to perform. Since our annual meeting, two of our members have been called away. They are W. H. Briggs, late treasurer of this National Association, and J. Horton, both of Montreal." Mr. Mansell then proceeded to read the following:

Whereas,—It having been reported to this convention that, since our last annual gathering, two of our most active members, viz., W. H. Briggs and J. Horton, both of Montreal, have passed away from the scene of their labors, therefore, be it

Joseph Wright and Party Shooting the Chute.

Resolved,—That, in the death of these comrades and friends, we have lost two of our truest and hardest-working members. How much they contributed to the prosperity of the association will probably never be known, but the kindly and devoted interest they took in all matters connected with the trade will not soon be forgotten by their wide circle of friends.

Resolved,—That the delegates of this convention sympathize with the families and friends of our late confreres in their bereavement, believing that "He that doeth all things well" will console them in their time of distress.

Resolved,—That these resolutions be inscribed in the proceedings of this convention, and that a copy thereof be forwarded by the secretary of the association to the families of the deceased.

On motion of Messrs. Wright and Powers, the resolution was concurred in.

A LETTER FROM VANCOUVER.

Mr. Wright stated he had received a letter from Mr. W. J. Barr, of the Vancouver association, and he then read the following:

Joseph Wright, Esq., Toronto.

DEAR SIR,—I am instructed by the Master Plumbers' Association of Vancouver to request you to represent us at the annual convention. We would very much like to send a delegate. The distance is so great that we call on your good nature to do us proud at the fourth annual convention. A few notes to let you know that we are alive will, I presume, not be out of place. We have been working along slowly but surely. As our city grows, so shall our association, which, as doubtless you know, is not very slow. We again thank you for your kindness in representing us at the last convention, and thank you in anticipation for the same this year, wishing you every success.

A letter was also read from the Windsor, Ont., association, reporting that the organization there was in a most satisfactory condition.

"It is one of the solidest associations in the country," enthusiastically remarked the secretary, as he concluded reading the letter.

President Smith: "It speaks well for the organizer."

A QUESTION OF REPRESENTATION.

Mr. E. B. Butterworth asked why it was that Ottawa had not been represented on last year's executive committee?

Mr. Wright, who was president for the year 1897-98, explained that in selecting the executive committee last year the idea was to have members who were near each other, in order that the heavy expense incurred in the previous year, when this idea had not been followed, might not be repeated. For instance, one member was in Winnipeg, and to bring him to attend a meeting in Montreal had cost $86.

President Smith explained that the vice-president for Ontario was an Ottawa man, Mr. Higman. Then, there was the legislative committee; it was composed wholly of Ottawa men.

Treasurer Meredith (facetiously): "We have a surplus this year, and, having done so well, we might have a representative from Great Britain on the executive. Have a sort of Imperial federation, as it were." (Laughter.)

The fact then leaked out that some of those on the legislative committee were not aware of the fact, although the list had been published in the official Bulletin. Then the question arose as to whom The Bulletin was sent, and Mr. J. Pascoe Beel, the editor, explained that, as far as he knew, every plumber in the country, whether he was a member of the association or not, received it. As it was felt that some may have been overlooked, the different members present volunteered to send in the names of bona fide plumbers in their respective districts.

REPORT OF THE COMMITTEE ON RESOLUTIONS.

Mr. J. W. Harris presented the following report of the committee on resolutions :

Your committee on resolutions beg leave to report the following :

1. The executive committee, in our opinion, has done its best during the past year to bring business to a good result, and we would urge the members to continue their good assistance to them.

2. Regarding the president's report, we recommend the members to follow as much as possible the very wise advice given in that very elaborate and intelligent document, for which we recommend a hearty vote of thanks.

3. In regard to the report of the vice-president, we recommend, as suggested in his report, that a committee of three be appointed, two from Montreal and one from Toronto, with full power to meet with a committee of manufacturers and jobbers to treat on any subject that may be of interest to both associations.

4. In connection with the secretary's report, we beg to concur in the hearty vote of thanks to him, and recommend the adoption of his report.

5. In regard to the report of the committee on apprenticeship, we beg to state that we fully agree with all its contents, and would recommend its adoption at this convention.

6. Re Bulletin report, we beg to confirm the motion which was passed at the executive meeting this morning, which left it in the hands of the executive for further consideration.

7. We recommend the adoption of the report of the vice-president for the Province of Ontario.

8. By the report of George H. Perrin, of the Provinces of Nova Scotia and Prince Edward Island, we are pleased to see that they have succeeded in getting the jobbers to sell to members of their association only, we would recommend that all places which are in a similar position use their best endeavors to obtain the same. We recommend its adoption.

9. Regarding the secretary's report of the city of Ottawa association, we beg to confirm its adoption.

10. Re the correspondence from The Starr Iron Co. to the Ottawa association in regard to the manufacturers forbidding its members to attend our convention, we strongly condemn their action, as their reasons for taking this action refer to the conduct of a few members, and it is unjust to treat this association as a body as they have done, particularly as a majority of the members of this National Association are quite ignorant of the facts in regard thereto.

J. W. HARRIS,
JOHN HIGMAN,
J. H. WILSON.

It was decided on motion of Mr. Wright, to take up the report seriatim.

On motion of Messrs. Wright and Montpetit, the report of the executive committee was adopted as read. So was that of the president.

When the clause dealing with the report of Vice-President Harris was read, and, after its adoption had been moved by Messrs. Powers and Knox, Mr. Ogilvie asked for more light, and a somewhat lengthy discussion ensued.

Mr. Harris explained that the object was to have the proposed committee, composed of three members—two from Montreal and one from Toronto—ready at all times to confer with representatives from the Dominion Supply Association, say every three months, to discuss grievances that might crop up.

Mr. Wright explained that Montreal was the headquarters of the Dominion Supply Association.

Secretary Mansell declared he did not see any difference between the special committee it was proposed to appoint and the sub-committee of the executive committee whose special duty was to look after grievances between the master plumbers and the jobbers and manufacturers.

Mr. Harris stated that there was nothing to prevent the proposed committee from being members of the executive and under its control.

President Smith suggested that a motion be made laying the particular clause on the table. "Then," he said, "after the election of officers we might appoint certain officers to do the work. I feel that we have appointed too many committees since our organization. Therefore, I think we ought to move carefully."

A corner in the Queen's Park, Aylmer, where the delegates did the "cake walk."

Mr. Powers : "Has it been customery for the executive committee to do this work?"

President Smith : "Yes."

Mr. Powers : "Then, I will withdraw my resolution."

Treasurer Meredith : "I think the matter should be referred to the present executive for consideration." He moved to that effect.

Mr. Butterworth feared that the committee Mr. Harris suggested would entail a great deal of expense, and then, as already stated, there was the danger of having too many committees. He moved that the report be amended so as to provide that two members from the place where the Dominion Supply Association met shall be the committee to confer with the supply men in regard to grievances.

Mr. Wright : "I am opposed to the amendment. The men appointed may not be capable of dealing with every case. It is necessary to have strong men to deal with the supply men."

Mr. Watson : "I do not see the advantage of having this committee. It will mean another committee. The matter should be left in the hands of the executive committee."

President Smith : "I favor the executive committee handling the matter."

Mr. Harris : "I have been asked by wholesale men and manufacturers if we had any people to whom they could address themselves. I think it would be a good thing if we could notify the supply men that we have a committee whose special duty is to attend to anything which may go wrong, and is ready to hear any complaint you may have to make."

After further discussion, the clause in the report referring to the appointment of a grievance committee was struck out, leaving the matter to be dealt with, and the clause as amended was adopted.

The secretary's report was adopted without discussion.

When it came to considering the report re apprenticeship, Mr. Harris said something should be done. Men sometimes came asking jobs who pretended to have served ten years, when perhaps they had not served ten months. These men were sometimes given employment, and it was only after they had destroyed material that their incompetence was discovered.

Mr. Fiddes explained that in Toronto, when a helper came seeking a job, he was asked for a line from his previous employer telling how long he had served, etc., and, if he had none, his former employer was telephoned to. It had worked exceedingly well.

Mr. Wright stated that the journeymen in Toronto wanted something done along these lines.

Mr. Wilson further explained that the Toronto journeymen wanted apprentices bound, but all the master plumbers did not want it.

Mr. Watson suggested that an apprenticeship should be drawn up by the National Association.

The report was adopted, as also were the reports in regard to The Bulletin, the

Province of Ontario and Prince Edward Island.

The report in regard to the letter from The Starr Iron Co., Limited, was the cause of a great deal of discussion.

"I think," remarked one member, "that The Starr Iron Co. is to be congratulated for having the manliness to state the reason that it could not be present at our convention, namely, because the Supply Association had forbidden it. They have let the cat out of the bag, and, by doing so, show that the Supply Association has levied a direct insult against the National Association of Master Plumbers. There were indiscretions at Quebec by a few members of the Master Plumber's Association, but so there were on the part of the representatives of supply and manufacturing firms; but to throw the onus upon the National Association is an insult."

A. FIDDES, a Toronto Delegate.

This voiced the opinion of the members in general, and the report was adopted.

The general report, as amended, was adopted as a whole.

STATUS OF PROVINCIAL VICE PRESIDENTS.

At the Quebec convention of the National Association, Mr. Meredith gave a notice of motion amending Clause 2 of Art. III., having for its object the clearer defining of the status of Provincial vice-presidents on the executive committee. The whole of this article read as follows :

Its officers shall consist of a president, vice-president, vice-president from each Province represented, financial and recording secretary, treasurer and executive committee.

The executive committee shall consist of the president, vice-president, financial and recording secretary, treasurer, retiring president, and a delegate from each Province represented in the association, who shall be elected at the annual meeting. The president shall be chairman of the executive committee.

Mr. Meredith, in bringing forward the motion, notice of which was given a year ago, said there was some doubt as to the meaning of the words "and a delegate from each Province represented in the association, who shall be elected at the annual meeting." His purpose was to remove all doubt by inserting after the word "meeting," in the fourth line in the second paragraph, the following words : "Each said delegate to be known and designated vice-president of the Province he represents."

The motion was seconded by Mr. Wilson, and carried.

The clause, as amended, now reads as follows :

Its officers shall consist of a president, vice-president, financial and recording secretary, treasurer and executive committee.

The executive committee shall consist of the president, vice-president, financial and recording secretary, treasurer, retiring president, and a delegate from each Province represented in the association, who shall be elected at the annual meeting, each said delegate to be known and designated vice-president of the Province he represents. The president shall be chairman of the executive committee.

A SCHEME OF REORGANIZATION.

President Smith : "I have been in harness since the formation of this association, but I consider that I am merely an apprentice, for I have only begun to learn my business. We have a country of great extent, and we find, as an association, that when we have grievances to face that we have difficulty in dealing with them.

"After looking into last year's report of the American association and into that of our own for this year, I have come to the conclusion that the sooner we adopt some scheme akin to theirs the better.

"I would like to see our Provinces organize as separate institutions. At certain seasons each Provincial association could have its own convention, and at this convention elect a member to represent it in the National body. The represe ntatives of the Provincial associations would constitute the supreme or National body."

Proceeding, he showed that, with the executive, say, in Toronto, and the grievance in St. John, N.B., how difficult it would be to deal with it quickly. "If we had Provincial associations it could be dealt with quickly and at so small a cost, that I feel we would be in the same position as the master plumbers of the United States. They have formed their State associations, and at the State election they elect to the National body. They elect from three to five. They can afford to elect that number. But at present we must curtail expenses, and after a few years have a treasury with some money in it.

"I have given this matter a great deal of study during the last few months, and have laid it before our association in London and before the Toronto association, not from a selfish standpoint, but to help the members living in the extreme ends of the country. Now is the time to work the matter out, for the more population we have the harder will it be.

"The details I have not yet worked out. Therefore, if this association sees that the proposition is for its good, I would like to see a committee appointed to work it out, and I think it would be advisable to have the committee appointed from one local association. I do not think it will take them long to get it into proper working form. Benevolent societies work on the lines I have suggested. Looking at it from the experience of the benevolent societies, I feel sure we will have no cause to regret taking a course such as I have suggested."

Mr. Ogilvie : "I fear, Mr. President, that we are not quite numerous enough to successfully carry out your scheme. You take the Province of Quebec; we have practically only the Montreal Association. If you form a Provincial association, it would practically consist of Montreal men only."

President Smith : "So much the better."

Mr. Ogilvie : "It might do in Ontario, where you have the Ottawa, Toronto, London and other associations. But take New Brunswick and Nova Scotia. What about those Provinces? Of course, there is nothing to lose, but there is nothing to gain."

President Smith : "If you form yourself into Provincial associations, I am satisfied you will get all the protection you do now, and the Provinces can work together hand-in-hand."

Secretary Mansell expressed his approval of the scheme, and he instanced the good work the Nova Scotian master plumbers were doing along certain lines.

President Smith : "Yes, and they are doing it without the aid of the National Association."

J. H. WILSON, Vice-President for Manitoba.

Vice-President J. W. Harris : "I think, Mr. President, that your suggestion is a good one. A thing which works well in one Province may not work well in another. If each Province had the control of its own affairs it would naturally know better how to deal with matters concerning it than would the Dominion organization. What, for instance, might be considered a grievance in one Province might not be so considered in another." Mr. Harris gave instances of this, and moved the appointment of a committee, consisting of Messrs. Smith, Mansell, Ogilvie and the mover, to consider the matter and report to the convention on the following morning."

The motion was seconded and carried.

Mr. Wright: "Before we adjourn, Mr. President, I would like to invite the members of this convention to a street-car ride around the city to-morrow afternoon."

The invitation was accepted, and the convention adjourned at 7.15 p.m. to meet again on the following morning at 8.30 o'clock.

THE BANQUET.

The banquet, tendered by the local association, was held in the dining-room of the Grand Union Hotel. Mr. John Higman, president of the Master Plumbers' Association of Ottawa, presided. On his right were seated Messrs. J. W. Harris, H. A. Knox and Mayor Payment, and on his left were Messrs. W. Smith, W. Mansell and W. H. Meredith. Between 40 and 50 guests sat at the tables.

The following was the menu:

MENU.

Consomme d'Eslignac.
Tortue Verte.
Olives.
Boiled Fresh Restigouche Salmon.
Sauce Parisienne.
Cucumbers. Potato Croquettes.
Boiled Turkey, Parsley Sauce.
Sweet Bread Patties, aux champignons.
Roast Ribs of Prime Beef, Horse Radish.
Spring Lamb, Green Mint Sauce.
Lettuce Salad.
Puree of Potatoes. Asparagus a la Hollandaise.
New Green Peas.
Diplomatic Pudding, Brandy Sauce.
Ladies' Fingers. Short Bread. Orange Jelly.
Strawberry Ice Cream.
Fruits.
Coffee. Roquefort Cheese. Crackers.

It was 10.30 o'clock when the first toast, "Her Majesty the Queen," was proposed and drunk amid the usual patriotic demonstrations.

OUR GUESTS.

"Be not forgetful to entertain strangers, for thereby some have entertained angels unawares."—Holy Writ.

The next toast was "Our Guests, the National Plumbers and Visitors." The names coupled to it were those of President Smith, Vice-president Harris and Treasurer Meredith.

President Smith, on rising to speak, was warmly applauded. "I do not know of anything that gives me so much courage as to be present as a guest at the annual banquet of the National Master Plumbers' Association." (Applause.) "I have attended four banquets of this kind, and I am assured that we are getting better known and that people are recognizing more and more the intention of our association. I hope the citizens of Ottawa will recognize the fact that we are not a combination. What we are primarily here for is to devise ways and means of improving the laws appertaining to the health of the community." (Applause.)

Vice-President Harris: "I shall speak, Mr. Chairman, on one condition, and that is that the official reporter take down my speech verbatim." Then, amid much laughter, he turned his speech into French. And, as he spoke of plumbing and the duties of master plumbers, Mr. Joseph Wright liberally applauded, much to the amusement of those present, it being known that Mr. Wright is not conversant with the French tongue. Eventually Mr. Harris got back to English again and outlined what he had said in French, and took occasion to jocularly remark that Mr. Wright was Wright even when he was wrong.

Treasurer Meredith: "We are not joined together, as some people think, for the purpose of doing people up. Our object is to improve the sanitary laws and do good sanitary work. I do not know any more white winged angels than the master plumbers." (Laughter and applause.) "We trust our calling may ever have an upward tendency and not grovel in the dust."

MAYOR AND CORPORATION.

The names of Mayor Payment, Ald. Davis and ex-Ald. Hill, chairman of the Board of Health, were coupled with the toast "The Mayor and Corporation."

Mayor Payment was felicitous. "I am a druggist," he said, "and the more sanitary work you do the worse it is for me." Everyone laughed, and then His Worship descanted upon the rights of the master plumber and the wisdom of his organizing to protect the same. He extended the freedom of the city to the delegates, and in closing remarked: "If any of you should, between now and the morning, get into trouble, I shall have much pleasure in rising early and bailing you out." (Laughter.)

Ald. Davis said that he was particularly pleased as a contractor and as chairman of the drainage committee, to welcome the master plumbers of Canada to the capital. Ottawa was a good city for the plumbers, and would particularly be so when the present 7-foot sewer was completed. He touched upon sanitary plumbing, and said there was great need of it in Ottawa and for that reason he favored the appointment of a plumbing inspector, whom he believed would soon be appointed. He urged the right of the master plumbers to look after their own interests and declared that if they did not they would be to blame themselves for the evils that might befall them.

Ex Ald. Hill's remarks were peculiarly interesting, in view of the fact that he confessed his conversion to the principle of appointing plumbing inspectors. "I claim that every city should have a plumbing inspector," he declared amid applause. "I was not always in favor of it, because of the expense it would entail, for I believe, and believe now, that if you appoint a man to a position of responsibility you should pay him a proper salary." (Hear, hear, and applause.) "Municipalities," he urged, "should be forced to enact proper sanitary laws." And again was the worthy chairman of the Board of Health applauded.

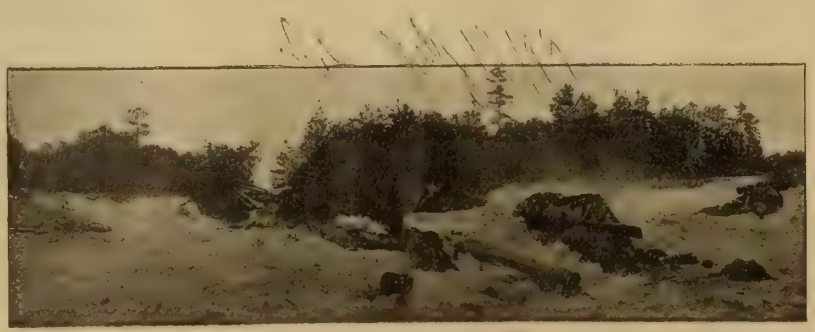
THE SUPPLY TRADE OF CANADA.

What private griefs they have, alas! I know not!
They are wise and honorable, and will no doubt with reasons answer you. —Shakespeare.

"The Supply Men of Canada" was warmly toasted.

Mr. A. Saunders, of the Goderich Organ Co., was the first to respond to the toast. He said it was a mistake to think, as some seemed to, that the supply men were not in sympathy with the master plumbers of Canada. "The supply men have the kindliest of feelings towards the master plumbers," he declared, "and I am sorry that not more of them are present to-night."

Mr. McAvity Stewart, of McAvity & Co., St. John, N.B., declared that the supply men wanted to do all they could to help the master plumbers along in their association work.



Messrs. Grey, of The James Robertson Manufacturing Co., Montreal, and Mr. Betton, of The James Morrison Brass Manufacturing Co., Limited, of Toronto, also spoke, and declared that the sympathy of the wholesale supply houses was with the master plumbers in their efforts to improve themselves and the sanitary condition of the country.

LOCAL MASTER PLUMBERS.

Be to their virtues ever kind,
Be to their faults a little blind.
—Prior.

"The Local Master Plumbers" was the next toast proposed, and coupled with it were the names of Messrs. John Higman and E. B. Butterworth.

Mr. Higman declared he had, both in Canada

CHATS FALLS, ON THE OTTAWA.

and in England, always taken a deep interest in sanitary matters, and descanted upon the necessity of a plumbing inspector being appointed in Ottawa. Amid applause, he announced that he was one of the oldest

J. LAMARCHE, Montreal. A man who was missed.

plumbers in Canada, having, in this and in the Old Country, served 41 years at the business.

Mr. Butterworth: "I certainly feel very much pleased with the meeting we have had to-day. It was, perhaps, not quite so large as some of the previous meetings, but it is certainly representative of the Dominion. We have in Ottawa one of the oldest local associations in the Dominion. It was organized some 15 years ago; but we have had many ups and downs. Sometimes, we were nearly out of existence. We are at present in as good a position as we have ever been. In Ottawa, there is much plumbing work that is good; but there is also much that is bad. When I was a member of the city council I tried to get an inspector appointed. The bill reached the third stage, when the poor man cry was raised, and it was defeated. Ex-Ald. Hill was one of those who voted against the bill, and I am very glad, indeed, to hear from his own lips that he has been converted." (Laughter and applause.)

Songs were given during the evening by Messrs. J. H. Wilson, H. A. Knox, A. Saunders and —. Dundale, of The Ottawa Gas Co., and Mr. T. McAvity Stewart gave a humorous recitation. Music was furnished by a string band.

Letters of regret were received from City Engineer Galt, Assistant City Engineer Kerr, Medical Health Officer Robillard, Chief of Police Powell, Warden King & Son, Dominion Radiator Co., Limited, (Toronto), H. MacLaren & Co. (Montreal), H. R. Ives & Co. (Montreal).

It was nearly 1 a.m. when the banquet was brought to a close with the usual ceremonies.

SATURDAY SESSION.

President Smith was in the chair on Saturday morning at 8.30 o'clock, but it was not till half an hour later that a quorum was secured, and in the meantime those present engaged themselves in bandying jokes at each other.

"The first thing we had better do," remarked President Smith when a quorum had been secured, "is to appoint a nominating committee."

Mr. Wilson: "I move that the nominating committee be now appointed."

Mr. Watson seconded the motion which was carried.

The President: "I will take upon myself to appoint the nominating committee, and will name Mr. Wilson, of Toronto, Mr. Watson, a good man to represent Montreal, and Mr. Knox, of Ottawa. Use your judgment, gentlemen, and select what will be the very best material."

SUPPLY MEN TALK.

It having been announced that representatives from some of the manufacturing and supply houses were waiting in the anteroom, according to agreement, the sergeant-at-arms was instructed to admit them. They accordingly filed in through the door, headed by Mr Saunders and captained by Mr. Joseph Wright who led them to the front, calling out in stentorian tones as he brought them into line: "Eyes right." Everybody laughed and then applauded.

The gentlemen present representing the supply men were: Messrs. A. Saunders, of The Goderich Organ Co.; Arthur Betton, of The James Morrison Brass Manufacturing Co., Limited, Toronto; — McDougal, of The Smart Manufacturing Co., Brockville; J. Carlind, of The Ideal Manufacturing Co., Detroit; T. McAvity Stewart, of McAvity & Co., St. John, N.B.; — Forbes, of W. Stairs, Son & Morrow, Halifax.

President Smith: "Allow me to welcome you. It is pleasant to see you even if we have not seen the heads of the firms you represent. As we have a great deal of business to transact I would ask you to be as brief as possible in your remarks."

Mr. Saunders said that he had much pleasure, on behalf of himself and other representatives of the supply houses, in thanking the association for the privilege of being present. "As far as I know," he continued, "the best of relations exist between the supply men and the Master Plumbers' Association of Canada. Perhaps some things may have occurred to create friction, but I can assure you the kindest of feeling exists among the supply men towards you. The supply men, as far as I know, are only too willing to maintain that good feeling. As you know, prices are fluctuating a great deal, and it is therefore particularly necessary that there should be a good feeling between you and us. The men who compose the Supply Association are honorable men, and if they are in a position to give you any advantage in prices they will do so."

Then, each of the other representatives was called upon for a few words and each in turn declared all he had to say was ditto to Mr. Saunders' remarks. Mr. Carlind did say five words additional. They were: "I am not an orator."

Mr. Harris: "Mr. Carlind says he is not an orator. That is not true, for yesterday he was able to talk to me for a straight hour in my office on the merits of his goods." (Laughter.)

When none of the representatives of the supply houses besides Mr. Saunders could be induced to speak, President Smith scratched his head and remarked: "Well, gentlemen, I am very sorry I asked you to be brief. Will someone now move a vote of thanks to the gentlemen."

Treasurer Meredith did this, and, in doing so, said: "I have much pleasure in moving a vote of thanks. I hope that in the years to come our relationship will improve. If they protect us, they can get better prices than they otherwise would. I am sure that the gentlemen here are business men enough to see that. I hope and trust that the supply men and the plumbers may become so firmly cemented that heaven

P. J. CARROLL, Montreal. Another man who was missed.

and earth will be unable to move them." (Laughter.)

Mr. Powers: "I second the motion."

President Smith: "I hope this vote of

thanks will be received in the spirit in which it is given. I am, yours truly, the president of the Master Plumbers' Association of Canada."

Mr. Saunders acknowledged the receipt of the vote of thanks, and said that if any grievance existed with the supply men a conference might be held during the day.

Orator Meredith at the banquet: "There are no whiter-winged angels than the master plumbers."

President Smith: "We are appointing a committee to confer with your association, and you will hear from it later. If you will remain a few minutes, gentlemen, we will show you how our machinery for the election of officers works."

NOMINATIONS AND ELECTION OF OFFICERS.

Mr. Wilson then presented the report of the nominating committee.

The nominations for president were Messrs. W. Smith and J. W. Harris.

"It would be a very selfish thing of me to take this office again," remarked Mr. Smith as he jumped to his feet. "I believe the office should pass around. I might say that during my term of office I have made every effort to try and advance the interests of the association. Mr. Harris, the other nominee has worked hard from the commencement of the association, and during the past year he has never failed to render me assistance when I have asked him for it. I realize that I cannot fill the position as well as Mr. Harris can, and I beg leave to resign in his favor."

Vice-President Harris: "I appreciate your remarks, Mr. President. That is, some of them. Some of them I do not very much. I think we have met here to tell the truth. Now, there are some of us here who are not telling the truth. We want nothing but the truth. Our president says that for the advancement of the association and the benefit of the members, he should resign in my favor. It would be the worst thing for the association. He has been a hard worker for the association ever since it was organized. Therefore, I think he should be kept in the office he now holds for another year. It is true that it is not always right to ask the willing horse to do all the work, but, at the same time, we can assure Mr. Smith that we will give him all the assistance we can during the coming year. I insist, and I hope members here will insist, that he remain in the presidency for another term."

President Smith: "I ask as a special favor that you allow me to decline the office."

On motion of Mr. Wright, Mr. Harris was declared elected president amid hearty applause.

Mr. Wilson: "I beg to nominate Mr. Mansell as vice-president."

Mr. Mansell: "I am surprised, Mr. President, at being nominated for the office of vice-president. I was for two years forced into the office of secretary, and I would like to see someone else in this office of vice-president. I would like to see Mr. Meredith fill the office."

Mr. Meredith at that moment entered the hall, and remarked: "I just came in here in good time. I can assure the worthy secretary that it shall not be as far as I am concerned." (Laughter.)

Mr. Harris moved that a ballot be cast for Mr. Mansell. This was seconded by Mr. Butterworth, and carried.

Mr. Wilson: "We nominate for secretary Mr. P. C. Ogilvie, of Montreal."

President Smith: "Here is another hard-working man nominated."

Mr. Ogilvie was not in the room at the moment, and the nomination was quickly approved.

Mr. Wilson: "We beg to nominate Mr. W. H. Meredith as treasurer."

Mr. Meredith: "I can assure the members of the Master Plumbers' Association that it is a grand moment. For the first time in our history we have money enough to meet all our liabilities at the end of our financial year. We can now send a donation to the manufacturers' association to give them a good square meal either in Montreal or Toronto. The incoming treasurer will have no liabilities. I ask that you will excuse me from filling this office."

President Smith remarked that, just as money was deposited in a bank that was known to be safe, so it was well to elect as treasurer a man who had been tried and found satisfactory. "There is no one more capable of handling the money of this association than Mr. Meredith," concluded the president.

Then someone moved that a ballot be cast, and, as the motion was declared carried, the members sang with gusto: "He's a Jolly Good Fellow," while Mr. Meredith, when he had a chance to make himself heard, declared: "Gentlemen, I do not thank you."

Mr. Wilson reported that the nominating committee begged to submit the following names as Provincial representatives on the executive: Ontario, H. A. Knox, Ottawa; Manitoba, J. H. Wilson, Toronto; Quebec, John Watson, Montreal; British Columbia, Joseph Wright, Toronto.

Mr. Powers: "Should not Nova Scotia be represented?"

Mr. Wright pointed out that, in drafting the nominations for the executive, an effort had been made to get the members from as near-by points as possible, with a view to curtailing expenses. That was why he was appointed to represent British Columbia, and Mr. Wilson to represent Manitoba.

Mr. Mansell: "I have much pleasure in moving that the name of Mr. Frank Powers be added to the executive as representing Nova Scotia."

Mr. Wilson suggested that Mr. Powers represent New Brunswick. Mr. Mansell agreed to this, and so did the convention to the motion.

On motion of Mr. Harris, seconded by Mr. Knox, the Provincial representatives on the executive committee were declared elected vice presidents for their respective Provinces.

This brought the elections to a close and the representatives of the supply houses took their departure.

THE TREASURER'S SATISFACTORY REPORT.

Treasurer Meredith presented his annual report, of which the following is a summary:

Receipts—	
Balance from late treasurer	$ 335.09
Received from all other sources	1,164.55
Total	1,499.64
Expenditures	1,329.20
Balance	$ 170.44

Mr. Meredith, on presenting his report, explained that as far as the executive committee knew all liabilities were included in his financial statement, including the expenses incurred in holding the present convention. (Applause.) But as far as the receipts were concerned, they were really larger than they appeared to be in his statement. For instance, there was yet coming from The Bulletin $96.75, which, being due by supply men, they were sure to get. Then, since his report was made up, the Winnipeg Association had sent a cheque for $8. So that the surplus was practically $275.19. (Loud applause.)

He did not join the Association, but gropes blindly by himself.

On motion of Mr. Mansell, the treasurer's report was handed over to the auditors.

Mr. Meredith: "All the associations, I might say, have paid their per capita tax."

PRESIDENT SMITH'S PROVINCIAL ASSOCIATION SCHEME.

President Smith said that when he had brought forward his scheme the previous day for the formation of Provincial associations he had overlooked Article XII. of the constitution. This article read as follows :

All local and Provincial associations when organized will at once notify the secretary of the National Association, giving the names of its officers and members.

"Now, I think," concluded the president, "that we have, therefore, already got the machinery for putting my scheme into motion. Will someone introduce a resolution that will put the machinery in motion?"

It was pointed out that this was unnecessary, as a committee had been appointed the previous day to consider the matter.

Just then Mr. Ogilvie advanced and presented the report of this special committee. He said : "Your special committee recommends that a committee be appointed to consider formation of Provincial associations, the said committee to report to the executive committee."

On motion of Messrs. Wilson and Higman, the report was concurred in.

Mr. Mansell moved that Messrs. W. Smith, J. W. Chambers, and E. R. Russell be a committee to consider and report upon the scheme re Provincial associations. In doing so, he said : "We are only following in the tracks of our friends across the line, who found they could not get along without the aid of State organization."

Mr. Higman seconded the motion, which was carried.

On motion of Mr. Powers, the treasurer was authorized to pay $10 for rent of hall in which the convention was held.

It was only just at this stage of the session that Mr. Ogilvie learned of his election as secretary, and having caught the eye of the president he said : "During my absence you elected me to the office of secretary. I do not feel qualified to fill the position. I am in favor of appointing a paid secretary, and I think you should have appointed such. We are all business men and scarcely have time to look after the amount of work that the office entails. I thank you, however, for the honor you have bestowed upon me."

President Smith : "What you say is very nice, but I think it would not be fair for the association to refuse to give you the opportunity to show what you can do."

Everybody laughed, and Mr. Ogilvie, seeing it was no use protesting, took his seat.

On motion of Messrs Harris and Powers, the following were appointed a committee to report at the next convention upon the question of continuing the publication of The Official Bulletin, and also in the meantime superintend its publication : Messrs. J. Wright, W. Mansell, and W. H. Meredith.

THE NEXT PLACE OF MEETING.

President Smith : "Where shall our next meeting be held?"

Mr. Watson : "I move that the next meeting be held in Montreal."

Mr. Harris ; "I second the motion."

Treasurer Meredith : "I have much pleasure in mentioning the city of Toronto, and I am sure that if the gentlemen come to that city they will be given a good reception. While we have met in Toronto since we last met in Montreal, yet, this year, we have come to Ottawa, a place where, if we were to fall over the bank of the river, we would be in the Province of Quebec." (Laughter.)

Mr. Wilson seconded Mr. Meredith's motion.

Mr. Powers : "I move that our next convention be held at some central point in the Maritime Provinces."

Mr. Knox : "I second the motion."

Mr. Ogilvie : "While we all would like to hold our convention in Halifax, I am afraid the association cannot afford the expense, as the cost would be enormous."

Mr. Powers : "I did not expect to carry this motion ; I merely threw it out as a feeler, hoping that I might carry a similar motion some other year."

Mr. Watson : "We would all like to go to Halifax, but, if we did go there, I am afraid that Mr. Meredith, who has been so successful in building up a surplus, would weep at the thought of his surplus vanishing. The reason I moved my motion was that I consider it would be a great help to our organization to hold the convention there. As far as Toronto is concerned, we know that the associations in Ontario are working well. The same cannot be said of those in the Province of Quebec."

Mr. Knox : "I favor Montreal, but merely seconded Mr. Powers' motion in order to bring the matter before the association."

Mr. Harris : "We remember the time we had in Toronto, and that is the reason we want the next meeting held in Montreal. We want to see if we cannot do as well as Toronto did two years ago."

Secretary Mansell : "I am glad to hear the remarks of Mr. Harris, because it shows they have not forgotten Toronto. What we did last time is only an indication of what we will do the next time the convention is held in Toronto. I sympathize with Mr. Powers and would like to see the convention held in Halifax, but I hope the members will support Mr. Meredith's amendment."

All the resolutions were voted down except Mr. Watson's, which was carried by a large majority, and subsequently made unanimous. The date for holding the convention was left to the executive committee.

Mr. Chambers presented the report of the auditors, certifying to the correctness of the treasurer's books. The report, on motion of Messrs. Wright and Butterworth, was adopted.

The duty of escorting the new officers to their respective positions was then taken up, President-elect Harris being escorted to his position by Mr. J. H. Wilson, who carried a large battle-axe on his shoulder.

On ascending the dais, the newly-elected president said : "I must, in the first place, thank our worthy ex-president for the good work he has done during the past year, and I feel sure that he will not refuse to give me all the help he can during my term of office. There is a great deal of work to be done, and I do not feel that I can do as well as I should like, but I can assure you, I will do my best, even if I do not please everyone. If, however, I do not do right, the onus is upon you, for you put me in this position. I told you before I was elected that I was not the right man for the position. Allow me, however, to thank you very much for the honor you have bestowed upon me by electing me to the presidency of this association. I hope that, during the coming year, we shall all enjoy good health and that we shall do good work, and what I mean by good work is the raising of our craft into a better position. We must get better prices. There is no question about that. We do not want to rob the public. All we want is to make a fair living." (Applause.)

Mr. Mansell was then deputed to escort the new secretary to his desk.

"I was not aware," said Mr. Ogilvie, as he took his position at the secretary's desk, "that I was to have been elected secretary or I might have been here and prevented it. I was induced to go for a car ride, hence my absence. I don't know whether it is a put up job or not. I thank the members, however, for the confidence they have placed in me, although I think their confidence is misplaced." (Cries of No, no.) "It is no use objecting now, however, and I shall fill the office as best I can."

Past President Smith was called upon to escort Vice-President Mansell to his position.

"I came here," said Mr. Mansell," quite unprepared for the honor which you have conferred upon me. I was in office during the past two years against my will. I hope that you will be disappointed in electing me to the office of vice-president. I leave myself in your hands to say at the end of next year whether or not your confidence was misplaced."

Mr. Meredith was then escorted to the treasurer's desk by Mr. Higman.

"I thank you very much," he said, "for again placing me in this position. I am proud of our financial position, and I hope at the next convention to be able to report a still better condition of affairs. May God be with you till we meet again," concluded Mr. Meredith amid the laughter of the delegates.

A vote of thanks, moved by Mr. Meredith and seconded by Mr. Wright, was conveyed to the Ottawa association for its efforts in arranging for the meeting of the convention.

On motion of Messrs. Meredith and Powers, a special vote of thanks was tendered to HARDWARE AND METAL.

After the transaction of some minor business, the convention closed at 12.05 p.m. amid cheers and other exhibitions of enthusiasm.

THE NATIONAL ASSOCIATION'S NEW PRESIDENT.

J. W. Harris, the newly-elected president of the National Master Plumbers' Association, is a member of the plumbing firm of Lessard & Harris, Craig street, Montreal. Mr. Harris was born in Buffalo, N.Y., in 1865, and came to Montreal when 7 years old.

When 18 years old he took a three-years' commercial course at Jacques Cartier Normal School. He then went to Chicago and learned the plumbing and heating business. A few years later he came to Montreal and became manager for Brodeur & Lessard. At the end of five years Mr. Brodeur retired and Mr. Harris became a partner. He has now been a member of the firm for 11 years.

Mr. Harris has invented and patented the "Aeolian" ventilator, the expansion conductor pipe, the "Anti Syphoning" trap, as well as a special system of ventilation for buildings.

Mr. Harris is also a mechanical engineer, having passed a successful examination last year before the Provincial board. He has always been a large contractor. The plumbing and heating in some of the largest buildings in Montreal have been done by his firm. Among the many may be mentioned Laval University, Monument National, Great North-Western Telegraph Company, Westmount town hall and the city hall, Montreal.

Mr. Harris has always taken a great interest in the Master Plumbers' Association, and has been an officer since its formation, in 1896. Last year he was elected vice-president, at Quebec.

J. Higman, of Ottawa, was the oldest plumber at the convention. It is 41 years since he began to wipe joints.

CONVENTION NOTES AND INCIDENTS.

A SHOCKED DELEGATE.

F. POWERS, of Lunenburg, is a rich man. He owns the Parliament buildings. At least, he says he does, but he is shocked at the way his tenants are conducting themselves.

"I went up to the House last night while it was in session," he said, "and do you know, the first thing I heard was that man Foster accusing my caretaker, Laurier, of being a thief."

THREE PLUMBERS WENT FISHING.

One morning during the Ottawa convention (what morning it was need not be mentioned) three plumbers went out to Aylmer to fish; and thereby hangs a fish tale. Mr. Smith, one of the three, hooked a fish. It was a large one, but as to how large it was there is some dispute, which, up to the time of going to press, has not been settled. Mr. Smith says it was about "that long." And, as Mr. Smith can stretch his arms about 5 feet 11 inches, some idea may be gathered as to how long "that long" means. At any rate, it took three men to land the fish, and a fourth, a native, to stand by and give instructions. J. W. Chambers says that the length of the fish was due a great deal to the stretching it got while being pulled through the water by the sturdy fishermen. And Mr. Chambers is a man of veracity, even on matters fishy. Mr. Smith says he could have landed the fish himself had he had a clothes line, for it was nothing to the fish he had caught at Port Stanley.

SHOOTING THE WATER CHUTE.

On Saturday evening, a party of the visiting delegates were escorted to the Queen's Park, Aylmer, Que., nine miles distant, by Messrs. McKinley and F. G. Johnson, of the Ottawa Association. The sun was just setting as the party sped up the right bank of the Ottawa river on the Hull electric railway, and the trip was a delightful one. There were in the party, besides the Ottawa men, Messrs. Joseph Wright, J. H. Wilson, W. Mansell, Timothy Christie, J. W. Chambers, W. Smith, W. H. Meredith, A. Betton, A. Carlind, F. Powers and John Watson. Everyone made up his mind to have a good time, and he had it. Mr. Wright was the leading spirit in the search for entertainment, and Mr. Meredith proved an able lieutenant. Everybody had to shoot the water chute, and he who hesitated to make the exciting trip was bundled into one of the boats, to come out at the other end often well sprinkled with water, but glad, rather than sorry, that he had made the venture. An impromptu cake walk was also gotten up, in which the older men outclassed the younger. The merry-go-round was not forgotten, and the honor of being the best rider was equally divided between Messrs. J. W. Meredith, of Toronto, and F. Powers, of Lunenburg, N.S., who rode neck-and-neck on miniature mules. It was a royal time that the delegates had at the Queen's Park.

NOTES.

"Was Lord Minto invited to the banquet?" asked a delegate.

"I don't know, but they 'Minto' have asked him," replied President Meredith.

An "Ideal" trap, manufactured by The Ideal Manufacturing Co., of Detroit, was set up in the convention hall. The delegates were much interested in the trap as it was explained by Mr. Carlind, the representative of the company.

If the Ottawa plumbers are as good plumbers as they are good fellows, they must be pretty near the ideal.

Mr. Joseph Wright is able to play as well while he is out as he is able to do business when at home.

Dr. Christie sounds as well as Plumber Christie, but it took Timothy Christie, of Montreal, years to earn the latter title, but the former he earned in a few minutes on Saturday night.

Mr. Joseph Wright took the delegates, their friends and the ladies for a street car ride on Saturday afternoon, but the power got awry, and at Sussex and Rideau streets the delegates had to get out and push the car along.

W. H. Meredith was both the orator and the punster of the convention.

T. McAvity Stewart's "wooden" arm is all right.

J. H. Wilson stuck to the "boys" through business as well as through pleasure.

The Western Ontario delegation reached Smith's Falls about 5 o'clock on Friday morning; a brakeman put his head in the "sleeper" and called Smith's Falls, modulating his voice on the word "Falls." President Smith rubbed his eyes, and, as he rolled out of his berth called out "all right." He hurriedly dressed. When the other delegates arose after the car reached Ottawa, Mr. Smith was not to be seen. But they found him up town. The mystery now is. how did he reach the capital first?

Did you shoot the chute?

A surplus of $275! Well done, good and faithful treasurer.

Mr. Frank Powers, of Lunenburg, N.S., who represented Halifax, was a new face at the convention, but he made a most favorable impression, and is destined, if the members are allowed to have their way, in filling important offices in the organization.

Treasurer Meredith could be quite aptly termed a young Napoleon of finance, the treasurer's report, for the first time in the history of the association, showing a surplus.

HEATING AND PLUMBING

PLUMBING AND HEATING CONTRACTS.

THE John Richie Plumbing and Heating Co., Limited, Toronto, have contracts for heating and plumbing A. A. Allan's large residence on Sherbourne street, the new warehouse for Gowans, Kent & Co., on Front street east, and for the National Trust building on King street east.

Mashinter & Co., Toronto, have contracts for plumbing in public schools on Leslie and Hamilton streets and Rose avenue, in the Orphan's Home, and in C. S. Gzowski's office building at 46 and 48 Bay street ; for plumbing and heating in residences for James German, Scarth road, for W. H. Banks, 1209 Queen west, for W. Monteith, Starr avenue, and for D. A. Coulson, Woodlawn avenue ; for hot water heating in a residence for Dr. J. Fitzsimmons, Toronto ; for plumbing and heating in the Southern Loan and Savings Co.'s office building in St. Thomas, Ont., and for hot-water heating in D. S. Perrin's residence in London, Ont.

MASTER AND MEN AGREE.

SOME weeks ago, an organizer of the Journeymen Plumbers' Union, from the United States, visited Toronto, agitating that the journeymen of that city should ask (and, if not getting by asking, should strike) for higher wages.

After he had been in Toronto a short time, he gave to the local press a statement that journeymen plumbers in Toronto were working for $1.60 per day, while in the United States from $2.50 to $4 per day is paid.

This statement was incorrect, the minimum union rate of wages in Toronto being 25c. per hour.

Another result of the agitator's visit was a request from the journeymen's association to the masters' association, asking the appointment of a committee to confer regarding a new rate of wages.

Messrs. James Wilson, Joseph Wright, W. J. Maguire and W. Mansell were appointed as the masters' committee.

Several conferences were held. The journeymen at first made a request for a minimum of 35c. per hour and an eight-hour day, with a half-holiday on Saturday. The masters decidedly refused to meet these views, but after fair and reasonable discusssion both parties accepted an agreement comprising the following clauses :

During December, January, February and March, the day shall be from 8 a.m. to 5 p.m. During the other eight months the day shall be from 7 a.m. to 5 p.m.

Overtime on Saturday afternoon shall be paid at rate of time and a quarter ; between 5 p.m. and 7 a.m., and on statute holidays, time and a half ; Sunday, twice the usual time.

The minimum rate of wages shall be 25c. per hour. All employes now receiving 25c. per hour or more are to receive an advance of 2½c. per hour, the advance dating from May 4.

All time spent traveling to or from out of town work to be paid at usual rate of wages.

All expenses for board and traveling while on out of town work to be paid by employer.

No plumber, gas or steamfitter shall perform any labor not pertaining to his trade, or put in any material for other than his employer, who shall be a bona fide master plumber.

All grievances are to be referred to a committee composed of members of each association.

The agreement has been signed by James Wilson, president of the Master Plumbers' Association, of Toronto, and by Frank Maxwell, president of the Journeymen Plumbers' Association, of Toronto.

PLUMBING AND HEATING NOTES.

Roy & Daoust, architects, Montreal, have dissolved.

A new Methodist church is being erected at Freelton, Ont.

The stock of French & Herley, plumbers, Halifax, is advertised for sale.

Plans for the new wing to the Toronto Isolation Hospital have been approved.

J.D. Ritchie has been appointed secretary-treasurer of The Toronto Steel Clad Bath Co. This firm has at present in the printer's hands its 1899 catalogue, which will likely be sent out to the trade this month.

Building permits have been issued in Toronto this week to S. H. Janes, for alterations to the interior of 14 and 16 King street west, to cost $8,000; to Mrs. A. J. Townsend, for two brick residences near Yonge street, on the south side Crescent road, to cost $4,000 ; to Lewis Luke, for alterations to 502 Huron street, to cost $1,000.

SMEAD-DOWD SYSTEM IN TORONTO

Since A. McFarren, a Toronto property holder, instituted proceedings against the Toronto School Board, and had that body fined for not complying with the city by-laws in putting the Smead-Dowd system in the public schools, there has been considerable interest taken in the plumbing of these institutions. Mr. McFarren recently wrote to the Toronto council asking that the medical health officer be compelled to see that the city plumbing by-laws be carried out, or that he be dismissed.

This letter was referred to the city board of health. This body met on Wednesday. Dr. Sheard, the medical health officer, in answer to the letter, stated that he had advised the board to move in the matter before Mr. McFarren commenced his action, but did not force action, preferring to wait until the schools had closed for the mid-summer vacation. He believed the technical verdict obtained by Mr. McFarren in his appeal to Judge McDougall would be sustained in the higher courts. The schools were now closed, and he understood that the school board had, under his advice, awarded contracts for the substitution of automatic flush closets where the Smead-Dowd system was now used.

In the short discussion following, the Smead-Dowd system was strongly condemned by some of the members of the board, and the medical health officer was instructed to prepare a report on separate outbuildings.

MOUNT FOREST WATERWORKS.

Mount Forest is extending its waterworks system by 4,500 feet of extra mains and hydrants. The contract has been awarded to J. P. Noonan, of Mount Forest. When the work is finished, Mount Forest will have a pretty complete waterworks system for both fire and domestic supply.

A CATALOGUE OF PLUMBERS' SUPPLIES.

The Booth Copper Co., of Toronto, Limited, are sending out to the trade copies of their 1899 catalogue. This work comprises 65 pages of illustrated matter descriptive of the wares manufactured or imported by this firm. Their list of hot-water and steam boilers, pantry sinks, water balls, water heaters, etc., will prove specially interesting to plumbers ; but their list of confectioners', brewers', and distillers' copper work will prove of great value to

Trade is good—the Plumber has a glad heart.

any plumber or hot-water fitter having work to do with any of these classes of goods. Plumbers who have not received a copy of this catalogue should write to 123 Queen street east, Toronto, for one.

FREE BOOK ON RADIATION.

A new catalogue on radiation has been issued by The Dominion Radiator Co., Limited, of Toronto. It contains several specially unique applications of the radiator and many new styles of radiation. Instructions are given as to how to pipe the latest systems for steam and hot-water heating as applied to large buildings, and contains much information on heating in general. A copy of this catalogue will be furnished free on application.

OPENED A BRANCH IN TORONTO.

The Ideal Manufacturing Co., of Detroit, have opened an agency in Toronto under the management of A. D. MacArthur. The office and sample-room is at No. 50 Colborne street, where samples of the company's low-down combinations can be seen under water.

TORONTO'S BIG HOTEL.

The Toronto board of works, which met on Wednesday, approved and sent forward to the city Board of Control a report from Assessment Commissioner Fleming, dealing with the proposed extension of Victoria street. The report advises that, on condition that the proposed million dollar hotel be erected, Victoria street be opened from King to Colborne streets. This will cost $80,000. The city is to pay half this sum, the rest to be paid by property-holders on King, Colborne, Wellington, Front, and Esplanade streets, between Yonge and Church, and on the new portion of Victoria street.

IRON PIPES AND ALTERNATING CURRENTS.

Now that metal tubes are becoming so extensively used for electrical wiring work, a few words of warning in regard to the disposition of the wires inside may not be out of place. If a single wire conveying an alternating current be run by itself in an iron pipe, the effect will be to cause an actual diminution of pressure of current in the wire, this diminution being proportional to the length of wire and tube and the strength of current. If, in a large installation, the main distribution board and the meter were some distance apart, and the cables connecting the two were placed in separate iron pipes, the pressure at the distribution board would be perceptibly less than if the cables were run side by side in one pipe. The explanation of this effect is that the presence of the iron increases the self-induction (or inductance) in the circuit, and leads to a corresponding loss or fall of volts. If the piping or conduit be of other metal than iron there will be no effect of self-induction, but there will be a slight loss of energy due to the setting up of induced currents in the tubing. When cables or wires connected with the opposite poles of the system are led side by side in the same pipe they annul each other's effect, and there is no disturbance due to the presence of the pipes. Such also is the case when a wire is looped to a fitting or switch. On direct-current systems, of course, there are no drawbacks attending the placing of single wires in pipes should it be necessary to do so.—Ironmonger.

DEATH OF A HARDWAREMAN.

Mr. Nelson Willard, one of the best-known hardwaremen in eastern Ontario, died on Friday, June 30, after a brief illness, at the residence of his brother, Mr. Harper Willard, Prescott, Ont. The deceased gentleman was in his 58th year, and conducted business on Water street for the past 34 years, succeeding his father in 1865. Mrs. Dr. Constantinides, of Toronto, Miss Laura Willard, and Mr. Harper Willard, of Prescott, survive him. The funeral will take place on Sunday afternoon.

TRADE IN OTHER COUNTRIES THAN OUR OWN.

THE American Glass Company have withdrawn the 5 per cent. rebate on single and the 10 per cent. rebate on double strength glass which they have made to qualified buyers, which is equivalent to an advance in price to the large trade. It is reported, according to Iron Age, that there is a growing demand for glass throughout the country and that higher prices are possible. New York jobbers continue selling at former quotations of 80 and 20 per cent. discount for small lots of glass and 85 per cent. discount for carloads, with light demand.

TINPLATES IN THE UNITED STATES.

In the tinplate industry The American Tinplate Company have offered to pay an advance equivalent to that paid by the manufacturers of sheets. This amounts to about 11 per cent. The officers of the Amalgamated Association, not having the usual discretionary power to accept less than 20 per cent. advance asked, have referred the offer of the manufacturers to the several lodges for a vote. This will lead to a stoppage of at least a week or ten days. It is not believed that a prolonged idleness is likely.—Iron Age.

NEW YORK METAL MARKET.

PIG TIN—There was not enough business or negotiation to fairly test the market. In fact, nothing was done outside of filling small out-of-town mail orders. No arrivals were reported, however, and the little business that went through was at about 26⅝ to 26¾c. Lots of five tons or more were 26½c., nominally.

COPPER—Nothing in the way of new feature came to the surface. Business was almost at a standstill, owing to the holiday interruption, and sellers generally quoted the same prices that prevailed at the close of last week, but business at any advance on the inside figures is, as yet, very much the exception. The range quoted is 18¼ to 18½c. for Lake Superior ingot, 17¼ to 17½c. for electrolytic bars, etc., and 17 to 17¼c. for casting stock.

PIG LEAD—A very steady market, with complete absence of new feature, covers all that there is to report on this metal. Consumers are buying fairly, but seemingly not much in excess of immediate needs, and dealers' purchases are moderate. However, the market retains quite firm tone, with prices standing at 4.45 to 4.50c., according to delivery and quantity.

SPELTER—The position of the market is unchanged. Stocks here remain very light, and dealers ask 6¼c. upward for what they have to spare for spot delivery. Early shipments from the West are also firm at about 5.80 to 5.85c., delivered here, and later shipments are only a fraction cheaper. The Western market has advanced about 15 to 20c. per 100 lb. during the week.

ANTIMONY—The market for regulus remains firm though quiet, with prices at from 10c. for ordinary brands up to 11c. for Cookson's.

TINPLATE—Buyers are operating in a very conservative way. The majority are getting fully ample supplies from deliveries on old contracts, and seem indifferent about later needs since distribution is slow. Prices remain without change of importance.

IRON AND STEEL—All varieties of pig iron are very firm and the demand, while somewhat irregular, is still much better than usual at this season of the year. Inquiries for export are still numerous, but difficulties with freight charges along with present high prices for iron restrict business more or less.

Old material is firm at unchanged prices, with desirable stock comparatively scarce in this neighborhood.

All lines of manufactured steel and iron are quoted very firm at top prices, but new business is momentarily rather slow.—New York Journal of Commerce, July 5.

DROP OF £3 IN SPELTER.

Rudolph Wolff & Co., London, report that during the week ending june 24 the price of spelter again dropped sharply, but the lower quotations brought in many consumers' inquiries, which, have, however, generally not resulted in business. From all reports consumers are now running very short of metal, and in many cases can scarcely wait for the turn of the half-year. Prices have now dropped nearly £3 during three weeks, and, as none of the producers on the continent will sell under the equivalent of £27 10s., it would seem that the fall has been unnecessarily accentuated in this market. Remelted spelter continues quiet and hard is very difficult of sale.

THE IRON SITUATION.

An advice from Pittsburg says: There has not been very much new business in Bessemer pig iron the past week, but the firmness which has characterized the market for some time past continues, and there has been a further advance in prices. Sales reported at $20 Pittsburg and $19.75 Valley furnace, which would be equal to $20.50 Pittsburg, with cost of transportation added. Mill iron has advanced fully $1 per ton during the past week, with sales at $17 up

to $17.75 Pittsburg. Foundry irons are also considerably higher.

There appears to be no abatement in the demand for muck bars, and notwithstanding all the old-time mills in the country, some of which had been standing idle for a number of years, have been started up.

In regard to finished material the general situation is much the same as reported for some time past; there appears to be no abatement in the demand, many of the mills are sold up for the rest of this year and prices continue to advance in sympathy with enhanced cost of pig iron, as well as labor and transportation. Notwithstanding the sharp advance in prices there is considerable export business.

The wrought iron and steel pipe mills are rushed with business, and those manufacturers who can make anything like prompt deliveries have no trouble in getting outside prices.

There has been little new business in Bessemer steel billets, which may be quoted at from $34 to $35. The last sale of sheet bars reported, one week ago, was at $34, but it is not likely that any more could be obtained at that price—$35 to $36 better represents the market. As in the case of billets, the mills are all sold ahead, and, as they are nearly all owned or controlled by a syndicate, there is not much for an outside buyer. Rails are still quoted at $28 to $30 at mill here, or from $4 to $6 per ton below Bessemer steel billets.

ADVANCING IRON PRICES.

Bessemer iron is now quoted at $20, Pittsburg, an advance of $9 since January 1. The fact is most significant, for many shrewd observers were of the opinion a year ago that $20 iron would not be seen in this country again for some years. That there will be a further advance in quotations is not unlikely, for the demand is wholly unprecedented, and is exhibiting a steadiness most gratifying to producers. In the meantime consumers are in no position to complain, for the prices of nearly all finished products have advanced with equal step. With the exception, perhaps, of the foundry trade, which has not profited as much as other branches of the iron industry, there is no reason to suppose that the advantages of the situation have not been shared generally. It is an object lesson of the plainest sort that the sharpest advances in price are not always attributable to the so-called trusts. That these may and sometimes do cause higher prices is not to be denied, but we have here a notable instance of the fact that they are sometimes as helpless in the control of prices as any individual operator. To blame even the iron and steel trusts, so-called, for the present extraordinary condition of affairs is connecting two things that are far apart. —American Manufacturer, June 30.

THE ORIGIN OF FIREPLACES.

The fires in early times were, remarks an exchange, without doubt, logs of wood heaped together and lighted upon the hearth. Over this fire probably the pot was affixed which contained the meal to be cooked. As the knowledge of the use of metals increased, men found that by arranging these logs of wood forming the fire on bars above the ground, a bright fire was the sooner obtained. Hence the arrangement of the andiron, which was originally simply a bar of iron placed across the hearth, supported on blocks of stone or burnt clay, across which and resting on them the logs were placed. Gradually an upright standard in front, and a leg formed out of the crossbar at the back, removed the necessity for the stone block or clay lump, and the complete andiron became a regular addition to the fireplace. Perhaps the oldest form of andirons known were found at Colchester, and at Hartlip, in Kent; they are of very simple construction, though with a little attempt at ornament in the top of the two standards; but as men grew more skilful in the working of iron, they showed their skill in the making of useful things in the house, making them ornamental as well as useful.

"American Customs." (New York Life.)

REVIVAL OF CHARCOAL IRON MAKING IN ONTARIO.

AFTER an interval of about half a century, the Province of Ontario once more has a charcoal iron industry within its borders, the furnace of The Deseronto Iron Company, Limited, at Deseronto, having now been in successful operation for nearly five months, writes W.M.B. in Iron Age. This furnace has been established at Deseronto by Detroit iron manufacturers, encouraged by The Rathbun Company, the local company who control the leading industries of the town. Deseronto is a town of 3,000 or 4,000 people, situated on the beautiful Bay of Quinte, near the eastern end of Lake Ontario. The furnace is built on the water's edge, a little to the west of the town, in an admirable position both for receiving and shipping by water or rail. A trestle-work extends to water sufficiently deep for the approach of vessels laden to the full depth which permits of passage through the Welland canal, which connects Lake Ontario with Lake Erie. This enables the company to use Lake Superior ores and bring them direct from the shipping ports on Lake Superior to the furnace about as easily as the same ore can be taken to Cleveland or Buffalo. The freight rates would probably not be as favorable, as vessels drawing more than 14 feet of water cannot pass through the Welland.

The company use ores from the Lake Superior region exclusively. The low prices of these ores, together with their known qualities and richness, the facilities for transportation and the fact that no import duty is imposed, are advantages which, for the present at least, overbalance the bounty inducement offered by the Provincial Government for the use of Ontario ores.

In the matter of fuel, there are probably few, if any, places on the continent where a long continued supply of charcoal can be more cheaply obtained in large quantities than at Deseronto. Charcoal may be considered a by-product of the Standard Chemical Company, of that town, which company have guaranteed to meet all the requirements of the iron company for this class of fuel, at a figure, of course, below Detroit figures. This section of Ontario being a limestone region, the fluxing material required is easily obtained.

The furnace produces iron adapted for car wheels, malleable castings and machinery, and a high silicon iron for ordinary foundry use.

The market for the iron is, of course, chiefly in Western Ontario, the duty of $2.50 per short ton and the Dominion bounty of $2 per short ton on pig made from foreign ore enabling the company to successfully compete with American iron at any point, and they have an advantage in freight charges in the Western market over their Canadian competitors in this class of iron. The probable completion this summer of the deepening of the St. Lawrence canals to 14 feet will also give the company the same facilities for shipment by water to tidewater points that they now possess to the upper lakes.

The furnace plant is admirably laid out and well built and equipped. The height of the stack is 61 feet, with a bosh diameter of 9½ feet. The iron pipe stoves were brought from one of the dismantled Detroit furnaces. The capacity of the furnace is about 1,000 tons of pig monthly. Work was commenced on the plant in May, 1898, and the furnace was blown in January 25, 1899. Wm. Gerhauser, of Detroit, is president of the company, and F. B. Gaylord is secretary, treasurer and manager.

There are prospects of the Deseronto furnace soon having a competitor at Midland, a port on the Georgian Bay, and a point well situated like Deseronto for receiving or shipping by rail and water. Using Lake Superior ores, it would have a much shorter distance to bring them in any size vessel that can enter the harbor, while the country to the north and east can supply wood for charcoal for many years to come. The pig iron bounty encouragement for Canadian furnaces is to be gradually reduced from April 23, 1902, and to cease on June 30, 1907. So far as quantity is concerned, the present Canadian furnaces are well able to supply the home demand for charcoal iron.

A BRIGHT IDEA.

Enterprise is what is needed in the present day, if the merchant in hardware, or any other lines, is to progress, remarks Stoves and Hardware Reporter. No amount of energy, effort and ingenuity are spared to increase business and get people into the store, for it is generally admitted that, once they are induced to enter, the great majority of them will see something they want and purchase it. An idea which an enterprising western merchant successfully carried out was unique and striking to the last degree. The occasion was a singing contest for which two prizes were offered. The contest was limited to children and there was a great number of contestants. The boy's prize was a watch and the girl's a lawn swing. A local composition, set to the tune of "Marching Through Georgia," was the test song. As a result of this scheme of the merchant's the store was crowded to overflowing, the eager listeners crowding the sidewalk as well, in order to get a glimpse and catch a note of the performance going on within. Now, a store could not have a better advertisement than this. People soon form a high opinion of its progressiveness, for they are pleased in every way by the diversion and the evidence of generosity,

A CONDEMNED RAZOR.

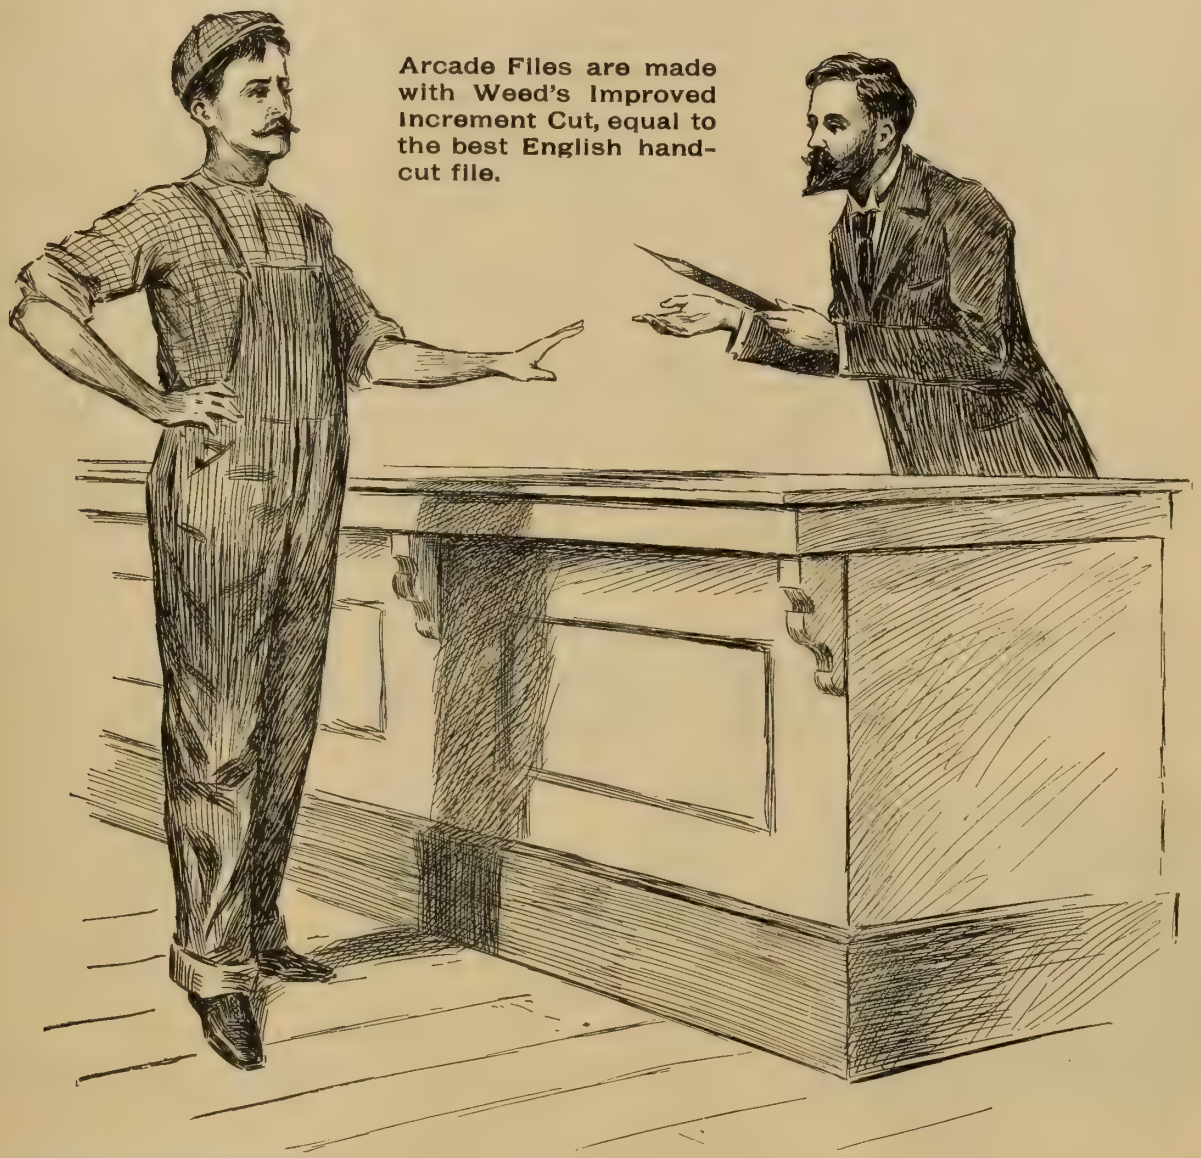
A RAZOR was returned to the hardwareman by a fellow who shaved only once a week, and who reported that the razor was soft and utterly useless. The hardwareman took it back without entering into any argument, as he feared the man might refuse to buy a pound of tenpenny nails or a fish hook if there was any dispute over the razor, and he didn't like to razor row that way, and thereby lose a valuable customer. The razor soon found itself in a drawer, where other condemned tools were kept. That night the whetstone and razor strop, who had seen the razor thrown into the drawer, put their heads together, and decided to encourage the razor to try again. They went to the drawer, and one of them said: "Friend razor, you have been abused and not given a fair show. That gap in your keen edge was never made on the face of any man, no matter how hard his cheek. The fellow who returned you used you for a corn knife among other things, and when he found you were dull he had no idea how to bring you up—to an edge. We are going to take you from your condemned associates and put you in prime order and then return you to your showcase." It was not long after this that the condemned razor was sold to a wealthy man, who, after using it a while, came to the hardwareman and said: "I wish to thank you for selling me that razor. It is the best blade I ever owned, and I wouldn't take $100 for it."

If, when we found some poor fellow who was discharged because he was thought to be worthless, we assisted him to brace up and try again, many a man might become a useful member of society who otherwise would go to the dogs.—Iron Age.

HE DIED BY INCHES.

A crank came running into the office of a Montana paper and said that a man had just swallowed a two-foot rule and died by inches. The editor started out at once to learn further particulars of the death, and, meeting a doctor, told him about the case. The doctor said:

"Pshaw! that's nothing; I once had a patient who swallowed a thermometer, and died by degrees."



A couple of bystanders then chipped in. One of them said it reminded him of a fellow down in Kansas who swallowed a pistol and went off easy. The other one said he had a friend who took a quart of applejack and died in good spirits.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

MONTREAL July 7, 1899.

HARDWARE.

THERE has been a fair week's business noted in general hardware, but no striking feature is to report and prices all round rule about as last reported. The main movement has been in screws, bolts and nuts and seasonable lines of summer goods, such as ice cream freezers, etc,

BARBED WIRE — There is practically nothing doing in barbed wire, and the price is unchanged at $3 f.o.b. here.

SMOOTH STEEL WIRE — A fair trade is noted in smooth wire, and the base price remains firm at $2.60 f.o.b. factory points.

FINE STEEL WIRE—Without feature, with discounts 25 per cent.

GALVANIZED WIRE — Business in this article is fair, and values are firm on the basis of $3 for No. 9.

BRASS AND COPPER WIRE—As last reported, with discounts 50 and 2½ per cent. on brass, and 45 and 10 per cent. on copper.

FENCE STAPLES—A fair movement is maintained in these, and prices are steady. We quote: $3.05 for bright and $3.65 for galvanized per keg of 100 lb.

OTHER STAPLES—Without new feature. Discounts are: Cooper, 55c.; poultry netting, 45, and electrician, broom, bed, etc., 40 per cent. off.

WIRE NAILS—There is a moderate movement and prices are unchanged, at $2.65 to $2.70 nett with miscellaneous nails 75 and 5 per cent. off list.

CUT NAILS — The same remarks apply to this line. We quote: $2.15 per keg f.o.b. Montreal, Toronto, Hamilton, London and St. John, N.B.

HORSE NAILS—Nothing special to report in these. Discounts, 50 per cent. on standard and 50 and 20 on Acadia.

HORSESHOES—Trade continues quiet. We quote: Iron shoes, light and medium pattern, No. 2 and larger $3.40; No. 1 and smaller, $3.65; snow shoes, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; XL steel shoes, new light pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; feather-weight, all sizes, Nos. 0 to 4, $4.90; and toe weight steel shoes, all forward, all sizes $6 f.o.b. Montreal, St. John, N.B., and Halifax, N.S. Delivered f.o.b. in Toronto, Hamilton, London and Guelph 10c. per 100 lb. extra.

TACKS — Without change. We quote: Carpet tacks, blued or bright, for 6, 8 and 10-oz. assorted, $4 per gross, with 45 per cent. off; tinned do., $6 per gross with 45 per cent. off.

SCREWS—There is still a fair inquiry for these. Discounts are: Flat head, bright, 82½ and 5 per cent; round head do., 75 and 5; flat head, brass, 75 and 5; round head do., 67½ and 5.

BOLTS—There is a satisfactary movement in these. Discounts are: Carriage bolts, 5-16 and smaller, 57½, per cent.; ⅜ and up, 52½ per cent.; full square bolts, 67½ per cent.; machine bolts, 57½ per cent.; coach screw bolts, 72½ per cent., and sleighshoe bolts, 72½ per cent.

NUTS AND WASHERS — These are moving quietly. We quote: Square, 4c.

STEEL SINKS

FIVE STYLES

Painted Both Inside and Outside.
Galvanized Both Inside and Outside.
Enamelled White Inside.

per lb. with discounts off list, and hexagon, 4½c. Washers in 5-lb. boxes are 50 per cent. discount.

RIVETS—Without special feature. Discounts now are: Black and tinned, 50 per cent.; ditto burrs, 45 per cent., while copper rivets and burrs are 35 per cent.

CORDAGE—As a result of stronger cables on manila hemp, the market here has been advanced for manila rope, and prices are higher all round. Sisal, however, is unchanged. We quote: Manila, 7-16 and up, 12c.; ⅜, 12½c., and ¼ and 5-16, 13c. Sisal, 10¾c. for 7-16 and up; 11¼c. for ⅜, and 11¾c. for ¼ and 5-16. Binder twine: Pure manila, 10½c.; 550 feet, 10c.; sisal, 500 feet, 9½c.

SHOT—There is no change in shot. Ordinary, 6c., and chilled 6½c.

CEMENT — Without alteration and business dull. We quote: Belgian, $1.90 to $2.10; English $2.30 to $2.40, and German, $2.45 to $2.65, per cask ex wharf.

FIREBRICKS — There is a good demand for these at $12 to $23 per 1,000 as to brand.

METALS.

The heavy iron and metal market continues firm in all lines, but business on spot for prompt shipment has been rather slack, and is expected to continue so for a week or so now.

PIG IRON—The firmness in this material continues, and some small contracts in No. 1 Hamilton have been put through at $21, and now an advance on that figure is asked. There is a rise of over 50c. the ton in the fortnight. Scotch pig is nominal at $22 to $22.50.

BAR IRON—The firm tendency of bar iron is unabated and nothing can be had under $1.90 except a round lot.

BLACK SHEETS—There has been an advance of from 5 to 10c. in these, and we quote: 8 and 16, $2.35; 18 and 20, $2.05; 22 and 24, $2.25; 26, $2.35, and 28, $2.40.

HOOP IRON—Without any change from $2.45.

STEEL—Quiet and steady. We quote: Sleighshoe and tire, $2.50; spring, $2.70; machinery, $3, and toe calk, $3.

GALVANIZED IRON — Stocks are light and prices firm under a good inquiry. We quote: Queen's Head, $4.55 to $4.80; Comet brand, $4.30 to $4.55, according to the size of the order.

INGOT COPPER—The advance in this metal on outside markets has not affected spot prices, which are pretty high, anyhow, and we quote 19¼ to 20c.

INGOT TIN—The same remarks apply to

SHEET IRON STEEL

tin, which has also ruled firm outside, and we quote 29 to 30c.

PIG LEAD—Without new feature at $4.25.

LEAD PIPE—Steady at 7c. for ordinary, and 7¼c. for composition waste, with 17½ per cent. discount.

IRON PIPE—Continues as last reported. We quote as follows: Black pipe, ⅛ and ¾-inch, $3.12; ½-inch, $3.09; ¾-inch, $3.72; 1-inch, $5.14; 1¼-inch, $6.82; 1½-inch, $8.66, and 2-inch, $11.02. Galvanized pipe, ⅛ and ¾-inch, $5.64; ½-inch, $6.64; ¾-inch, $7.41; 1-inch, $10.12; 1¼-inch, $14.03; 1½-inch, $17.16, and 2-inch, $23.

CANADA PLATES—As a result of reduced stocks, prices are from 5 to 10c. higher on Canada plates, both plain and galvanized. We quote: 52's, $2.30; 60's, $2.40; 75's, $2.50; full polished, $3.15; galvanized Canada plates, $4.25 for 52's.

TINPLATES—In fair request and firm. We quote as follows: Coke, I.C., $3.50; charcoal, I.C., Allaway or Comet brands, $3.75; do. I. X., $4.50; Lincoln, $4; P. D. Crown, $4.25; do. I. X., $5.25; Bradley's, $6.05.

TERNE PLATE—Jobbers are asking 25 to 50c. advance for these, as to quality, and we quote $6.50 to $6.75.

COIL CHAIN—Firm, but quiet. We quote: No. 6, 10¾c.; No. 5, 9¼c.; No. 4, 8¼c., and No. 3, 7¼c. per lb.; ¼-inch, $6; 5-16, $4.75; ⅜, $4.25; 7-16, $4.10; ½, $4; 9-16, $3.95; ⅝, $3.85; ¾, $3.65, and ⅞, $3.55 per 100 lb.

SHEET ZINC—Without special change at 8 to 8¼c.

ANTIMONY—Unchanged, at 10 to 11c.

SPELTER—Featureless at $7.

GLASS.

There is no change in this market. We quote: First break, $1.80; second, $1.90 per 50 feet; first break per 100 feet, $3.50; second, $3.75; third, $4; fourth, $4.25; fifth, $4.75; sixth, $5.25, and seventh, $5.75.

PAINTS AND OILS.

There is little change in the situation of this department of business. A moderate movement is noted in both paints and oils, and there are no changes to report except a decline in the price of turpentine of 2c. to 59 to 60c.

WHITE LEAD—Best brands, Government standard, $6.00; No. 1, $5.62½; No. 2, $5.25; No. 3, $4.87½.

DRY WHITE LEAD—$4.75 in casks; kegs, $5.

RED LEAD—Firm; casks, $4.75; in kegs, $4.50.

WHITE ZINC PAINT—Pure, 8c.; No. 1, 6½c.; in oil, pure, 9c.; No. 1, 7½c.

PUTTY—We quote: Bulk, $1.65; bladders, in bbls., $1.80; bladders, in cases, $1.95; in tins, $2.05 to $2.30.

LINSEED OIL—We quote: Raw, 57c.; boiled, 58c., five to nine-barrels, 1c. less, ten and twenty-barrel lots open, net cash, plus 2c. for 4 months. Delivered anywhere in Ontario between Montreal and Oshawa at 1c. per gallon advance and freight allowed.

TURPENTINE—One to four barrels, 59 to 60c., two to four-barrel lots, 1c. less, five barrels and over, open terms, the same terms as linseed oil.

MIXED PAINTS—Firm; $1 to $1.20 per gallon.

CASTOR OIL—Firm; at 7½ to 8c.

SEAL OIL—35½ to 37½c.

COD OIL—35 to 37½c.

NAVAL STORES—There is an improved demand for all lines, and prices show no change. We quote as follows: Resins, $2.75 to $4.50, as to brand; coal tar, $3 to $3.50; cotton waste, 4½ to 5½c. for colored, and 6 to 7½c. for white; oakum, 5½ to 6½c., and cotton oakum 9 to 11c.

PARIS GREEN—We quote: 250-lb. casks, 13½c.; 50-lb. drums, 14c.; 1-lb. packages, 15c.; ½-lb. packages, 16½c.; 1-lb. tins, 15½c.

PETROLEUM.

In this article an active business is reported, there being a good demand from all over the country for all grades, and more so for Crown Acme, the new Sarnia oil, on account of its superiority in quality. The tone of the market for all grades is steady and prices show no change. We quote: Crown Acme, the new Sarnia oil, at 15½c.; Perfection and Silver Star Canadian refined, 14½c.; American prime white, 17c.; water white, 18c., and Pratt's astral, 19½c., in small quantities.

MONTREAL NOTES.

Turpentine has declined 2c. per gallon.

Black sheet iron is about 10c. up all round on last week.

Terne plates are held from 25 to 50c. higher than last week.

There has been a rise of from 5 to 10c. in Canada plates of all kinds.

The price of Manila rope here has followed the rise noted in the West last week.

James Clinskill, general merchant, Battleford, N.W.T., has bought out Leslie & Wilson, general merchants, of Saskatoon, N.W.T. He will carry on both businesses, the Saskatoon branch under the management of W. R. Latimer.

BIGLEY'S COMBINATION WATER HEATERS

THE above cuts show the heater in one, two, and three sections; more sections can be added if required. They are manufactured of cast iron. Are strong and durable, and are tested to 150-lbs. pressure. They are much cheaper than ordinary pipe coils and last three times as long. Manufactured in 7 sizes, from 12 to 28 inches in diameter, and will heat from 100 to 2,500 feet of 1-inch pipe. Can be fitted to most any kind of hot-air furnace, or globe stove, or any similar stove, and do not in any way interfere with the heating capacity of the furnace or stove, but add from one-half to two-thirds more heating power and saves much fuel. For greenhouse heating they are very serviceable, and may be built in brick. The trade will find that it is to their advantage to use these heaters. Capacities guaranteed. Send for catalogue.

Patented and Manufactured by

R. BIGLEY, 96 and 98 Queen Street East, TORONTO

ONTARIO MARKETS.

TORONTO, July 7, 1899.

HARDWARE.

THE wholesale hardware trade during the past week has been fairly good, although the orders are not, as a rule, for very large quantities. Letter orders are particularly numerous this week. The scarcity noticed in certain seasonable lines, such as harvest tools, screen doors and windows, and green wire cloth continues. There have been some changes in prices during the past week. Both tire and stove bolts have been advanced. The same is to be said of iron rivets and burrs. Lead pipe, on the other hand, has been reduced about 2½ per cent. The Canadian makers of edge tools have advanced their prices from 25 to 30 per cent. These are the only noteworthy changes in hardware. The demand for wire nails is, on the whole, fairly good, and prices are decidedly strong with an upward tendency. Cut nails continue quiet. A fair business is being done in oiled and annealed wire. Horse nails and horseshoes are still quiet. The screw trade is active, and it is quite possible that an advance may take place before a great while. The rope market is steady at the recent advance.

BARBED WIRE—There is just a moderate business being done, and the trade is being chiefly supplied by American manufacturers. The price is unchanged at $3.25 f.o.b. Toronto.

SMOOTH STEEL WIRE — A fair trade is to be noted, particularly in oiled and annealed wire. There is practically nothing doing yet in hay-baling wire, but, of course, it is yet early for much business in this line. The base price is unchanged at $2.60 f.o.b. factory.

GALVANIZED WIRE — There is still little going out, but no large quantities appear to be wanted. We quote: Nos. 6, 7, 8 gauge, $3.40; No. 9, $2.90; No. 10, $3.50; No. 11, $3.55; No. 12, $3.05; No. 13, $3.15; No. 14, $3.90; No. 15, $4.50; No. 16, $4.65.

WIRE NAILS — The demand is fairly good, and it is the general impression that stocks bought at the low prices are getting pretty low. Dealers consequently are now beginning to buy more freely at the higher prices. There has been no change in the price, $2.65 f.o.b. Toronto still being the ruling quotation, but an effort is now being made by the makers to further advance their figures, which, in view of the high cost of raw material, they are undoubtedly warranted to do.

CUT NAILS—Business in this line is still only moderate, but the base price is steady and unchanged at $2.50, f.o.b. Toronto, Hamilton and London.

HORSE NAILS — Trade is seasonably quiet, but next month is expected to see an improvement in the demand. We quote: Standard, oval head, 50 per cent.; Acadia, countersunk head, 50 and 20 per cent.

HORSESHOES— Trade is still quiet and prices steady and unchanged. We quote f. o. b. Toronto, Hamilton, London and Guelph: No. 2 and larger, light, medium and heavy iron shoes, $3.50; snow shoes, $3.75; light steel shoes, $3.75; featherweight shoes, all sizes, $5. No. 1 and smaller, light, medium and heavy iron shoes, $3.75 per keg; iron snow shoes, $4.00; light steel shoes, $4.00; featherweight steel shoes, all sizes, $5.00.

SCREWS —Trade in screws is still active and prices firm. HARDWARE AND METAL would not be surprised to hear of an advance in the price of this line before long. We quote as follows: Flat head bright, 82½ and 5 per cent. off the list; round head bright, 75 and 5 per cent.; flat head brass, 75 and 5 per cent.; round head brass, 67½ and 5 per cent.; flat head bronze, 67½ and 5 per cent.; round head bronze, 62½ and 5 per cent.

BOLTS—The feature of this line is an advance in the price of both tire and stove bolts, the discount now being 60 and 10 per cent,, instead of 65 and 10 per cent., as before. Other kinds of bolts are unchanged at the recent advance. The demand for bolts, particularly carriage, machine and stove, is brisk. We quote: Norway bolts, full square, 67½ per cent.; common carriage bolts, 5-16 and under, 57½ per cent.; ditto, ⅜ and larger, 52½ per cent.; ditto, full square, 67½ per cent.; machine bolts, all sizes, 57½ per cent.; coach screws, 72½ per cent.; sleighshoe bolts, 72½ per cent.; blank bolts, 57½ per cent.; bolt ends, 62½ per cent.; nuts, square, 4c.; nuts, hexagon, 4½c.; tapping nuts, 60 per cent.; tire bolts, 60 and 10 per cent.; stove bolts, 60 and 10 per cent.

RIVETS AND BURRS — The price of iron rivets and burrs has been advanced, the discounts now being 45 per cent. for iron rivets and 40 for iron burrs, against 50 and 45 per cent. respectively, as before. We quote as follows: Carriage section, wagon box rivets, etc. (steel), 60 per cent. off the list; ditto (Norway iron), 55 per cent.; black M rivets, (steel) 60 per cent.; ditto (Norway iron), 45 per cent.; iron burrs, 40 per cent.; copper rivets, 35 per cent.; bifurcated, with box, $1.25; coppered iron rivets and burrs, in 5-lb. carton boxes, 30c. per lb.

ROPE — Business is just moderate and prices as quoted last week. The hemp market rules steady. We quote as follows: Sisal, 7-16 in. and larger, 10½c. per lb.; ⅜ in., 11c.; ¼ and 5-16 in., 11½c. Manila, 7-16 in. and larger, 12c. per lb.; ⅜ in., 12½c.; ¼ and 5-16 in., 13c.; New Zealand, 9½c. per lb.; Deep sea line, 13½c. for water laid, and 14½c. for machine-made; hemp, 7 to 9c.; lath yarn, 8¾c. Clotheslines, 48 feet, 90c.; 60 feet, $1.20; 72 feet, $1.50; 100 feet, $2.

CHURNS — Business is fairly good, but devoid of any particularly new features. We quote: Metal frame—No. 0, $3; No. 1, $3.20; No. 2, $3.40; No. 3, $3.75; No. 4, $4.50; No. 5, $5.90. The price of wooden frames is 15c. per churn less than the above. Terms, 3 per cent. off 30 days f.o.b. Toronto.

WRINGERS—Trade is fair and prices unchanged. We quote as follows: "Leader," $60 per doz.; "Royal Canadian," $58; "Royal American," $48. Prices are all f. o. b. Toronto, Hamilton, Brockville, and Montreal. Discount, 45 per cent. Terms, four months, or 3 per cent., 30 days.

BUILDING PAPER—There is still a fair trade doing at former prices. We quote as follows: Plain building, 28c. per roll; tarred lining, 35c., according to quality; tarred roofing felt, $1.40 per 100 lb.; carpet felt, $2.25 per 100 lb.

GREEN WIRE CLOTH— The Canadian manufacturers are still refusing to accept new orders, and, consequently, difficulty is being experienced by jobbers in supplying the demand. The price is still $1.75 per 100 square feet.

POULTRY NETTING—The demand keeps fair and the discount unchanged at 50 per cent.

SPADES AND SHOVELS—The demand is just moderate and the discount firm at 40 and 5 per cent.

TOOLS—The demand keeps good for harvest tools, nearly every order coming in wanting scythes, snaths, hay forks, turnip hoes and three-prong forks, all of which are more or less scarce. Discount 60, 10 and 5 per cent.

SCREEN WINDOWS AND DOORS —These are still very scarce, and wholesalers have got to the point where in some instances they positively cannot fill orders.

METALS.

The metal market generally is stronger than it was a week ago, and our quotations on tin, tinplates and Canada plates are higher. There is a decidedly stronger feeling in iron pipe and higher prices are almost certain to rule within the next few days.

PIG IRON — The market continues very strong, particularly in the United States. We still quote Hamilton iron at $18.50 to $19 at the furnace for No. 1.

BAR IRON — The demand keeps good and prices are firm at $1.90 to $1.95 base.

BLACK SHEETS—Trade is decidedly good in this line and prices are firm at quotations.

GALVANIZED IRON — Trade continues active in this line, and, although no changes

are made this week in our quotations, yet the general tendency of the market is upward, and jobbers are predicting that prices will eventually reach $5 per 100 lb. Supplies from the United States have ceased altogether on account of the prices ruling over there. We still quote 28 gauge at $4.75 per 100 lb.

COPPER—There is a moderate demand for ingot copper, and in sheet copper there is an active trade to be noted. The price is unchanged at 19 to 19½c. for ingot, 23 to 23½ for sheet, and 23½ to 25c. per lb. for bar.

PIG TIN—The market for this has been strong during the past week, and prices are ½ to 1c. higher than at the time of last review. We now quote Straits at 30c. to 31c. per lb. and Lamb and Flag at 31 to 32c.

TINPLATES—The market for tinplates is decidedly strong and cables received this week note an advance of 1s. per box on 14 x 20, the base. Prices on all grades of tinplates locally have been advanced in proportion. The demand is fair, but the advance in price somewhat affects business at the moment.

CANADA PLATES — Cable advices state that prices have advanced in England equal to about 15c. per box, and jobbers here have marked up their figures by a corresponding amount. The mills in England are well employed, and it is the general opinion that the present prices will be maintained for some time to come at anyrate. Business is beginning to move a little better on the local market. Import orders are arriving. We quote: All dull, 25 sheets, $2.75; half polished, $2.85; all bright, $3.20.

IRON PIPE — The market is decidedly strong, and higher prices are almost certain within the next few days. We quote as follows: ⅛ to ⅜ inch, $3.10; ½ inch, $3.25; ¾ inch, $3.80; 1 inch, $5.25; 1¼ inch, $7; 1½ inch, $8.75; 2 inch, $12; 2½ to 6 inch, discount 50 per cent. Galvanized pipe: ½ inch, $6.50; ¾ inch, $8; 1 inch, $11; 1¼ inch, $15.25; 1½ inch, $19; 2 inch, $27.

PIG LEAD—Trade is still quiet and with quotations unchanged at 4¼ to 4½c. per lb.

LEAD PIPE—On account of American competition the price has been reduced about 2½ per cent., the discount now being 20 per cent. on lead pipe, composition pipe and waste pipe, instead of 17½ per cent. as before. The list price is still 7c. for ordinary pipe and 7½c. for waste.

RANGE BOILERS — The market is firm at quotations and business continues fairly good. We quote as follows: Galvanized, 30 gals., $9; 35 gal., $10; 40 gal., $11. Copper, 30 gal., $22; 35 gal., $26; 40 gal., $30; discount off copper boilers, 10 per cent.

COIL CHAIN—Trade is quiet and prices firm at quotations. We quote: ¼ in. $6.75; 5-16 in., $4.75; ⅜ in., $4.30; 7-16 in., $4.15; ½ in., $3.05; ⅝ in., $3.85; ¾ in., $3.75.

SHEET ZINC — Trade is a little more active than it was, with prices unchanged at 8¼c. for cask lots and 8½c. for small lots.

SPELTER — Business still shows improvement in this line, and we quote 7½ to 7¾c. per lb.

SOLDER—Is moving upwards in sympathy with the high prices of tin, although our quotations are still much about the same as before.

ANTIMONY—Is quiet and unchanged at 11 to 11½c. per lb. for Cookson's.

PAINTS AND OILS.

A fairly good sorting trade is still noted. The demand for white lead is steadily falling off, but turpentine and oil continue in good demand. The demand for sundries is less active than in the past few weeks, but is still good. Turpentine is advancing in the primary market. On Monday, the price f.o.b. Toronto was reduced from 60 to 58c., but the feeling has since strengthened, so that the price has again been raised to 60c. It is now steady at this price. Linseed oil and lead are firm at unchanged figures. We quote:

WHITE LEAD—Ex Toronto, pure white lead, $6.12½; No. 1, $5.75; No. 2, $5.37½; No. 3, $5; No. 4, $4.62½; dry white lead in casks, $5.10.

RED LEAD—Genuine, in casks of 560 lb., $4.90 to $5; ditto, in kegs of 100 lb., $5.15 to $5.50; No. 1, in casks of 560 lb., $4.75; ditto, kegs of 100 lb., $5.

LITHARGE AND ORANGE MINERAL—We quote: Litharge, 6 to 6½c.; orange mineral, 7½ to 8½c.

WHITE ZINC—Genuine, French V.M., in casks, $7 to $7.25; Lehigh, in casks, $6.

PARIS WHITE—We quote 90c.

WHITING — 55c. per 100 lb.; Gilders' whiting, 85c.

GUM SHELLAC—In cases, 24c.

PLASTER PARIS — Ordinary, $1.75 per barrel; New Brunswick, $2 per barrel.

PUMICE STONE—Powdered, $2.50 per cwt. in barrels, and 4 to 5c. per lb. in less quantity; lump, 10c. in small lots, and 8c. in barrels.

LIQUID PAINTS—Pure, $1 per gallon; No. 1 quality, 90c. per gallon.

SEAL OIL—Is quoted at 59 to 60c. per gallon, and yellow seal at 49 to 50c.

CASTOR OIL—East India, in cases, 9c. per lb. and 10c. for single tins.

LINSEED OIL — Quotations to outside western points are (freight allowed): Raw, 1 to 4 barrels, 57c.; boiled, 1 to 4 barrels, 60c. Prices in Toronto, Hamilton, London, are 1c. per gallon less.

TURPENTINE—We quote for outside western points, freight allowed, 1 to 4 barrels, 61c.; in less quantities than barrels, 5c. per gallon extra will be added and packages charged for. Prices in Toronto, Hamilton, and London are 1c. less than the above. Terms, net 30 days.

GLASS.

Dealers throughout the country are beginning to manifest impatience at the non-arrival of import orders. Wholesalers, however, are in the same fix, for not a box can arrive before the third week in July. A fairly good demand from stock is reported. These are filled with great difficulty, on account of the scarcity of many sizes. Prices are high and unchanged at the following figures: Star, first break in 50-foot boxes, $2, and in 100-foot boxes, $3.75; double diamond under 25 united inches, $6, Toronto Hamilton and London; terms 4 months or 3 per cent. 30 days.

MARKET NOTES.

Lead pipe is 2½ per cent. lower.

Coal has advanced 25c. per gross ton.

Pig tin, tinplates and Canada plates are all quoted higher.

The manufacturers have advanced the price of edge tools.

Tire and stove bolts and iron rivets and iron burrs are all higher.

Turpentine declined 2c. on Monday, but a stiffening in prices in the primary market has brought the price up again to last week's quotation, 60c. Toronto, and 61c. at outside points.

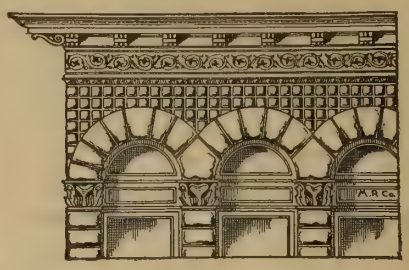
JAPANNING TINWARE.

A CORRESPONDENT recently asked an exchange how he should treat tinware in the process of japanning so that the japan would not scale or peel off. A practical man to whom the question was submitted has answered it somewhat exhaustively. He points out, in the first place, that japanning is the process of giving to manufactured articles of tin, sheet metal, and iron the appearance of lacquered wares. The colors mostly used in japanning material are black and light and dark brown. Black japan is a mixture of copal varnish and ivory drop black (ground in japan). Light and dark browns are a mixture of copal varnish and asphalt in sufficient proportions to produce the desired shade. Various shades are made by mixing copal varnish with colors ground in japan, the following colors being used: Indian red and vermilion, plain or glazed with carmine; coach painters' green, light, medium, or dark blue, white, etc. Gold, copper, and other shades of bronze powder can be used, and produce an excellent finish for piano plates and light hardware.

The beginner should not undertake to mix his own japanning colors, but should buy a carefully and specially prepared japan for all purposes, as he will find it cheaper and better. He should use only bronze powder which shows perfectly dry and brilliant in the bulk, and is made with the addition of as little oil as possible, as this will keep its original color longer than bronze that is made with oil. Before applying the japan care should be taken to clean off all rust and oil, for if not thoroughly clean the japan will peel off.



Use a flat bristle brush of proper size in coating the articles with japan. The elasticity of the material makes this necessary to secure a smooth and even surface. On cheap tinned articles one coat is all that is usually applied. Sheet iron should, if necessary, have two coats, though one coat can be applied to cover it thoroughly when put on by an experienced japanner. Large and small cast iron articles are coated with a brush, though small castings are often dipped and allowed to drip suspended from wires.

To produce a gold, copper, or other bronze finish first coat the article with varnish size, allow the size to become nearly dry, or tacky, and then apply the bronze with a velvet or plush pounce. Japanned and bronzed articles are given a coat of varnish immediately after being taken out of the baking oven, though this is only when a very smooth and glossy surface is required.

The process of mixing and applying being finished, it is necessary to place the article in the baking oven. These ovens are specially constructed for the purpose of baking japanned work. They are built in various sizes, according to the room required, usually of brick and having sheet iron doors, with tiers on inside walls. A steady temperature from 250 to 400 deg. F. is required, and articles remain in the baking oven from 12 to 48 hours. Heat is obtained by the use of coal, but recently gas has been introduced. The gas oven is preferred, being cleaner, gives a quicker and more steady heat, can be easily regulated, and is less expensive to operate.

OUR . . .

Sheet Metal Fronts

including **CORNICES, DOOR AND WINDOW CAPS, etc.,**

are invaluable for use in new buildings, or for improving old ones.

They give a most artistic appearance, are very easily applied, and offer fireproof and enduring protection at a very small cost.

If you're not acquainted with these lines, send for our catalogue and read full information.

It makes interesting reading for practical people.

THE METALLIC ROOFING CO., Limited

1179 King St. West, TORONTO.

A UNIQUE HOT-WATER HEATER.

R. Bigley, 96 and 98 Queen street east, Toronto, is putting a unique and useful hot-water heater on the market. It is simply a coil of piping, either conical or circular in shape, made to fit into a furnace or an ordinary heating stove in such a way as not to interfere with the heat ordinarily given out by them. This new heater is called Bigley's patent conical (or circular) hot-water heater, is made in many different styles, ranging in price from $1.75 to $30. A small booklet with illustrated description of these heaters and Bigley's patent base heating furnaces can be had on application.

GOOD PENKNIFE FOR $50.

One sample carried by Mr. Rothschild was one of the novelties which only the rich can afford, remarks a contemporary. It was a pocket-knife with sides made of cut gold bearing quartz. The quartz was exceedingly rich, and, although white and transparent as crystal, was so full of flecks of solid gold as to look yellow to the eye. The rivets were concealed in designs of solid gold and the metal plates and trimmings were all of the same metal.

"That knife retails at about $50," said Mr. Rothschild. "They are sold singly, for I never found a customer who felt like ordering them by the dozen. We sell a great many to eastern tourists, who prize them as souvenirs of the trip. The gold and quartz come from Californian mines, and we do the work in our own factory. This quartz is also made up in cane handles and sides of match safes."

A BOOK OF ART.

The Watson, Foster Company, Limited, have now in course of preparation their annual catalogue. It will contain 40 pages, half of which will be full-page illustrations, in half-tone, of some of their best patterns for the coming season. The quaint design of the cover and the beautiful paper on which it is reproduced will certainly combine to make the book one which may be well termed a work of art, and well worth preserving among other souvenirs and bric-a-brac.

The management of the company requested us to advise the dealers in wall papers that, if, after the present month has expired, they have not received a copy, they can be cheerfully supplied with one on application, as it is quite possible some may be inadvertently overlooked in the rush of mailing.

A merchant should not, in considering his own, forget the interests of his clerks. The interests of the two are so closely allied that injury to one means injury to both.

MONTREAL WALL PAPER FACTORY

SEASON 1899-1900.

Our new line is now complete and our travellers are on the road.

It will be to the interest of every wall paper dealer in Canada to see our samples, as they are the most attractive we have ever produced.

They are exceptionally strong in popular designs and in harmony with the prevailing colors in house decoration.

The range of ingrain colors with friezes from 9 to 22 inches wide will be found specially pleasing.

Colin McArthur & Co.

1030 Notre Dame Street

MONTREAL.

A PLEASING PRESENTATION.

On Tuesday evening, about 60 members of the Granite Club, Toronto, met in the club rooms to do honor to Captain Arthur N. Burns, who had resigned the position of secretary of the club, which position he had held for five years, to join the business staff of the Toronto office of The MacLean Publishing Co., Limited.

After a supper had been given in honor of Mr. Burns, Mr. Bernard Jennings, manager of the Imperial Bank, and president of the club, after an address expressing sorrow because of his resignation, presented him on behalf of the club with a case of pipes, and beautiful gold watch with monogram on the back and the following inscription on the inner case: "Presented to Captain Arthur N. Burns by friends of the Granite Club, Toronto, July, 1899." Mr. J. C. Kemp, of the Bank of Commerce, also made a short speech, giving Mr. Burns the promise of the lasting good-will of his fellow clubmen.

Mr. Burns was greatly pleased by these evidences of friendship, and expressed his pleasure in a short speech, suitable to the occasion.

ELECTRIC HEATING.

Some very useful hints on electric heating were given in the course of a paper read before the French Society of Engineers recently, by M. Lalance. He first described in detail the method of constructing an electric heating and cooking apparatus, in which wires are embedded in enamel in order to prevent oxidation, etc. He explained the difficulty that had been found in getting resistance material and enamel with practically the same coefficiency of expansion in order that they might not part company when heated. The author says that when electric energy is produced by water power it is possible for electric heating to compete financially with ordinary methods of heating; and beyond this, as is well known, the electric heating has peculiar advantages from the fact that it does not in any way vitiate the air or cause noxious fumes when used for cooking purposes. The author then proceeds to calculate the cost of performing certain cooking operations and boiling of water by electricity, assuming that the price paid per unit for energy is about 4½d., as is the case in Paris. He points out that, although these prices are high, yet other advantages derived from electric heating make this acceptable to the public. With respect to the question of the heating of buildings, the author states that it requires about 65 watts for every cubic metre of space which has to be maintained at 22 deg. C. above the temperature of the outside air. He gives an instance of one dining-room in Paris that is electrically heated, in which the total cost per annum for electric energy comes out at £6 5s. The total equivalent load, we presume, in 10 c.p. lamps, which is obtained from the heating apparatus in the Secteur de la Place Clichy, is equal to 5,000 lamps. In the concluding part of his paper, the author refers to other systems of heating, such as the use of red-hot rods of silicon in a vacuum.

A PROFIT-SHARING SCHEME.

Profit-sharing is an old idea for inducing employes to take an interest in their employers' business. Many schemes have been tried during the last twenty years—some of them have failed, others have been allowed to die out, and a few are still in force. The limitization of a business is, to my mind, the best system of profit-sharing, but, at the same time, what is known as the bonus system has, in certain cases, advantages peculiar to itself, says a writer in Ironmongery. Clay & Co., wholesale ironmongers, of New Wortley, Leeds, have just formulated a profit-sharing scheme, some details of which have been sent me by Arthur Clay, the head of the firm. Mr. Clay states that for years he has held that the result of a man's labor should be his own, and he has resolved to give his workpeople an interest in the business. It was difficult to formulate a sound scheme, but he has decided to try one which, if not perfection, has its advantages. He proposes that in future his employes shall share the profit in proportion to their wages. If the profit is 5 per cent., then the employe will be entitled to 1s. for every £1 of wages he has drawn. If 10 per cent., 2s,, and so on. Mr. Clay recently unfolded his scheme to his employes in the course of a social evening gathering, and it is almost unnecessary to say that the proposal was warmly received. I fancy the growing business of this firm will not stop developing as a result of this additional encouragement afforded the staff to do their best.

SHOP PLACARDS.

Where home-made placards are used in the shop, care and judgment must be exercised in wording them, so that they shall be both impressive and expressive, remarks an exchange. The chief defect in placards often is excessive similarity, because the man who usually writes them allows his mind to run too long in the same groove, unhesitatingly employing the same words and phrases over and over again. In this manner constant repetition loses its effectiveness. It is one of the instances where constant dropping does not wear out the stone, but rather tends to harden it. An oft-repeated phrase soon ceases to be forcible. Like a twice-told tale, it rather vexes and annoys those who contemplate it. Many stores make the mistake of going to this extreme when lauding forth the many good qualities of their wares. They will, for example, use the word "special" on every placard till everybody is surfeited with it. The principal aim and object of these signs is to act as silent salesmen. If they are interesting, original and clever they may certainly serve as pretty fair substitutes. Indeed, there are instances when they could be made much more efficacious than the lackadaisical assistants, who are frequently either unwilling or unable to impart information.

TRADE CHAT.

The Atikoken Gold Development Co., of Ontario, Limited, has been incorporated with headquarters at Port Arthur, Ont.

The Wire and Cable Co., Limited, Montreal, intends applying for incorporation.

The John Abell Engine and Machinery Works Co., Limited, Toronto, have purchased the Stewart & Harper property on Main street, Winnipeg. It is understood the firm intend erecting a fine warehouse and other buildings on this property.

THE BICYCLE IN WAR.

The possibilities of the bicycle for purposes of war were explained recently at the Royal United Service Institution, London, by Captain Baden Powell, of the Scots' Guards. There are, it seems, three principal circumstances in which British troops may be employed on service, and in each of which bicycles may be found of the greatest value. These are—at home in case of invasion, abroad where the roads are good, and abroad where the roads are comparatively few and bad. Captain Baden Powell thinks that it is in the first of these categories that bicycles would prove most useful. By this means comparatively large bodies of troops can be conveyed to the seat of war, and there could thus be a rapid concentration on any point, quite independent of railways. Among the other directions in which cyclists might be utilized, Captain Baden Powell enumerated "raiding"—that is, a rapid march into the enemy's country for some particular object; scouting and reconnaissance; as mounted infantry to a force of all arms, and as orderlies and messengers of transport. The importance of this matter is evidenced by the fact that a systematic training of regular troops in the use of the cycle is about to be inaugurated at Aldershot, under the supervision of Col. Alderson, the officer commanding the mounted infantry.

Store Helps.

We don't blame you for hesitating before taking on "novelties" and accumulating dead stock after the "novelty" part has worn off.

What you want is "store help"—real, true, honest aids for business and for more of it, and that is just exactly what we offer you in Boeckhs' Bridled Brush for Painters.

It is no "novelty"—it is just a plain, sure, safe "store help," but it represents the most progressive time and labor saving idea for Painters that has ever been followed out on practical lines.

A flexible, liquid-proof bridle that gives each separate bristle its full flexible powers, enabling the paint to spread over the greatest possible amount of surface at one sweep of the brush. A bridle that can be taken off and replaced in a second, to cut down or to clean out the brush. Send for our illustrated book, telling all about

HOW TO RETIN COPPER WARE.

"SUBSCRIBER," Winnipeg, writes: "Can you favor us with a recipe for retinning copper ware. We have some of this work to do and would like you to give us a reply at your earliest convenience."

Answer.—Some months ago there appeared an article in HARDWARE AND METAL, signed by H. F. M., dealing with this very matter, a digest of which we herewith give for "Subscriber" and others who may be interested.

The article to be retinned is first put on the fire and kept turned till it is heated all over and is black on the inside. A coke or charcoal fire is preferred. Then sal ammoniac, finely powdered, should be sprinkled all over the inside. With a piece of tow the inside should then be wiped out, care being taken to wipe around the handle rivets. The copper is then removed from the fire and allowed to cool until the hand can just bear upon it. Into the copper should then be poured raw muriatic acid to cover the bottom to about half an inch. With a rod having a wad of tow fastened to the end the acid is swilled around the inside. It is best to allow the acid to remain in the vessel for a few hours, swilling it once every hour or two. After pouring the acid off wash the inside with water. With wet, sharp sand and a wad of tow, scour the inside, after which, if the burning and pickling be well done, it will be found clean and smooth. If a gloss is desired the vessel should be scoured a second time, this time with sand containing no gritty matter.

After the outside has been scoured bright wash out in cold water and cover the inside with pounded sal ammoniac diluted with water. A covering of whiting and salt is then applied to the outside. A handful of whiting covered with salt gives about the proper proportion. Mix into a paste with water and apply. The vessel now being ready to tin, it is again put upon the fire and heated as before. When it has reached the proper temperature, it will melt a few pieces of block tin which have been placed in it. With a wad of clean tow wipe the tin all over, beginning at the bottom. If the copper does not tin nicely, a pinch of sal ammoniac sprinkled thereon will help matters. Next turn the pot on its side and wipe the melted tin around, a portion at a time, till it has covered every part, then wipe the surplus tin with a quick motion into a pan placed beside the fire. It is advisable to have some muriatic acid which has been cut with zinc and daub on any spot over which the tin does not flow well, but the hot copper should not be scraped if it can be avoided.

Without allowing the article to cool, it is then put back upon the fire, and, with a wad of cotton waste, free from grease, and dipped in fine ashes, the inside is wiped out, beginning in the centre of the bottom and wiping spirally towards the sides. The sides should be wiped in a zig-zag motion while working gradually around. Before the copper has cooled, plunge it into clean, cold water, and wash off the whiting from the outside. The inside should not be touched at all, and care must be taken to change the water frequently, for the least salt, sal ammoniac, or acid in the water will turn the inside dark in color. If the copper becomes cold while working it off, it should be immersed in hot water and quickly dried in a box of sawdust on being lifted out. If it is exposed to the air before being dried it will tarnish. A good finishing sand may be obtained by washing the scouring wad in water and getting the sediment that accumulates in the bottom.

KEEP GOODS YOUR CUSTOMERS WANT.

A prominent hardware dealer in a recent conversation with me said, says a writer in American Artisan, that there was any amount of tommy-rot afloat about window display for hardwaremen, shelving, arrangement of tin pans, etc. Continuing, he said: "To make your store attractive have goods on hand that your customers want. Swell display may be all right, but the way to get and hold a customer is to be able to give him what he wants. I found this out soon after I began business, for people who came in and wanted to buy certain articles seemed much disappointed whenever I had none in stock. I soon lost them as reguiar customers. To avoid all this I kept a memorandum of articles called for which I had not kept in stock, and as soon as possible procured them. I have continued this habit and have a memorandum book always at hand for the purpose. In this way I have made my assortments varied and attractive, and have built up a larger, more permanent patronage than I otherwise could have done. A large advertisement in the local newspaper, a three-color circular and a brilliant window display, are all essential and give abundant returns for the money invested. I've found that out, but the biggest help is to have every man, woman and child in your neighborhood know that if they want a special size of screw, or a washer, or any hardware article, I can give it to them."

SMOKELESS POWDER FACTORY FOR MONTREAL.

There is a probability that Montreal will have a smokeless powder factory in the near future. Negotiations to this end are now going on between interested parties with fair prospects of success.

RULES FOR COMPUTING INTEREST.

The following, from an exchange, will be excellent rules for finding the interest on any principal for any number of days. When the principal contains cents, point off four places from the right of the result to express the interest in dollars and cents. When the principal contains dollars only, point off two places:

Four per cent.—Multiply the principal by the number of days to run, and divide by 90.

Five per cent.—Multiply by number of days, and divide by 72.

Six per cent.—Multiply by number of days, and divide by 60.

Seven per cent.—Multiply by number of days, and divide by 52.

Eight per cent.—Multiply by number of days, and divide by 45.

Nine per cent.—Multiply by number of days, and divide by 40.

Ten per cent.—Multiply by number of days, and divide by 36.

Twelve per cent.—Multiply by number of days, and divide by 30.

Fifteen per cent.—Multiply by number of days, and divide by 24.

Eighteen per cent.—Multiply by number of days, and divide by 20.

Twenty per cent.—Multiply by number of days, and divide by 18.

Twenty-four per cent.—Multiply by number of days, and divide by 15.

IT COULDN'T BE DONE.

An individual with considerably more lung power than was agreeable to his hearers was hawking fish recently in a northern town, says Tit-Bits.

"Fine fresh herring'—fower a penny," he roared, in a fashion that made the windows rattle.

A woman approached the barrow and eyed the fish with a certain amount of suspicion, which, considering the circumstances, was not unnatural.

"Are they fresh?" she demanded, with a suspicious sniff.

"They're fower a penny, mum," was the guarded reply.

"Yes," responded the other, with a touch of sarcasm, "I think I 'eard yer say so. But are they fresh?"

"For aught I know, mum, they is."

"Where wor they cotched?"

This was too much, and, adopting the sarcastic style of his questioner, the hawker replied:

"Can't say for sartin, mum. I applied for the birth an' death stificate of every fish on the barrer, but, at fower a penny, it simply couldn't be done!"

"'Ere y'are! Fower a penny, herrin',"

The stock of Gilmour Bros. & Co., wholesale dealers in hardware and grocery sundries, Montreal, has been slightly damaged by smoke and water ; insured.

DEATHS.

Nelson Willard, hardware dealer, Prescott, Ont., is dead.

A NEW LAWN SPRINKLER.

The Champion Manufacturing Co. are putting on the market a newly patented lawn sprinkler which they claim is a great improvement over any other make. It is very easy to work and cannot be put out of order. It gives a very fine spray — much like a shower of rain — whilst, at the same time, throwing a large body of water over a circumference of from 20 to 30 feet. They are made in three sizes, and, besides being sprinklers, can be used for spraying vines, bushes and flowers. Meakins, Sons & Co., of Hamilton and Montreal, are sole agents for them.

CURRENT MARKET QUOTATIONS

July 7, 1899.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices throughout the civilized world.** Executive Offices: **Nos. 346 and 348 Broadway, New York City, U.S.A.**

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying, and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world. Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by respectable and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence Invited.**

CAUSES OF FAILURE

In the Hardware Trade and How Avoided.

As long as there are failures, subjects that furnish information how to prevent them will always be timely. We have published, in pamphlet form, three admirable papers on the above topic, in which Over-Stocking, Expense, Capital, Credit, Discounts, Buying, etc., etc., are ably discussed. We will mail the whole three essays to any address on receipt of **10 cents**

HARDWARE AND METAL, Toronto

THE PRESS CLIPPING BUREAU

Reads every newspaper in Canada and clips therefrom all articles of a business or personal nature of interest to subscribers in this department.

Politicians can obtain from it everything the papers say about themselves on any subject in which they are interested. Business men learn of new openings for trade, pointers to sell goods, addresses of people likely to become buyers, tenders wanted, stocks for sale or wanted, reports of new industries or stores, etc.

Terms—$5 per hundred clippings: $40 per thousand, payable in advance; but a yearly contract will be found the most satisfactory.

We have also lists of firms in every branch of trade in the Dominion, the professions, club members, society, etc., and we are prepared to address and mail circulars or letters to these at any time.

Dominion Pattern

Cow Tie AND Stall Fixture

The special features of the tie and stall fixture are well shown in the illustration. As will be noticed the chain is very short which prevents all danger of entanglement with the animal's foot. At the same time the form of the fixture is such that great freedom is allowed to the head. Because of the short chain this tie is much cheaper than the ordinary patterns.

The stall fixture is made from a tough quality of steel and is very strong. Also, owing to its circular cross-section, it is exceedingly rigid. Its simplicity, convenience, cheapness, and ease of attaching make it very popular with cow tie users.

This form of tie and stall fixture are sometimes called Niagara pattern.

American or Flat Link Chain,

for years the standard cow tie chain in "the States," is now rapidly coming in favor in Canada. Its short link, handsome appearance and smooth surface—which cannot injure the animal's neck—make it superior to all styles of chain for cow ties.

Established 1825 Important Decision relating to the Established 1825

HEINISCH

TRADE-NAME ON SHEARS, TRIMMERS, Etc.

The U.S. Circuit Court, Southern District of New York, Judge Townsend, has rendered a decision in the suit of "R. Heinisch's Sons Co. vs. Hermann Boker & Co."

"The Complainant is entitled to an accounting, and to an injunction restraining them from using the names 'Heinisch' or 'H. C. Heinisch' on its Shears, Labels, etc., and otherwise, in any way which will interfere with Complainant's enjoyment of the benefits of its Trade-name."

Referring to the above decision, we would respectfully state our determination to protect our rights in the premises and warn all persons against any imitation of our Trade-name.

TINPLATE TROUBLES.

IT is an interesting fact in connection with the tinplate industry that in both Great Britain and the United States the labor question has been occupying a great deal of the attention of the masters of late.

The conditions are not, however, at the same stage in both countries.

In Great Britain the difficulty has reached the settlement stage, the workmen having agreed to accept a reduction of 10 per cent. in wages. In the United States the conditions are at a most acute and unsatisfactory stage, the men having demanded an advance of 20 per cent. in wages, which The American Tinplate Co. has, so far, emphatically refused to concede, although it has expressed its willingness to give an increase of 11 per cent., the same as was accorded the men in the merchant sheet mills. Then, it was only three months ago that the company voluntarily advanced wages 8 per cent. But the men are persistent, and a protracted struggle is probable.

The men have some reason for their persistency, notwithstanding what their employers have already done for them in the way of higher wages and what more they are willing to do.

Since the formation of the syndicate which now controls the tinplate mills of the United States prices have appreciated $1.20 per box, or about 42 per cent, while the company is said to be getting $9,600,000 a year more for its output than the makers obtained in their preconsolidation days.

Naturally, the men feel that they are entitled to a larger share of the profits than the masters are willing to concede. How far the men are justified in their demands it is difficult to say, for it must be remembered that, while the mills are getting a great deal more for their plates than they did a year ago, they are also paying a great deal more for their raw material than they were then. Most people, however, will probably not hesitate to say that the workmen have the better side of the argument.

In the meantime, the British tinplate manufacturers stand to profit by the troubles of their American confreres. As it is, the tinplate trade in England is healthier than it has been for years.

A FARSEEING BUYER.

THERE was one farseeing firm in Montreal who anticipated the current advance in general iron values a long way ahead.

Early this spring, just when values gave their first symptoms of an upward tendency, this concern placed liberal orders for all kinds of staple iron material. They are reaping the harvest now, for contracts that they placed just as the advance was originating are not completed yet.

As there have been several advances since May 1, they have some relatively cheap merchandise with which to compete for trade and yet make handsome profits.

BANK CLEARINGS FOR SIX MONTHS.

The following table, giving the bank clearings in the eight principal cities of the Dominion during the first six months of the present year, as compared with last year, is a most satisfactory showing.

	1898.	1899.
Montreal	$357,194,318	$393,676,407
Toronto	216,461,697	248,574,641
Winnipeg	40,233,020	43,249,620
Halifax	29,798,989	31,608,539
Hamilton	17,505,530	19,245,675
St. John, N.B.	13,949,241	15,085,714
Victoria		15,700,583
Vancouver		17,136,571
Totals	$675,142,795	$751,440,605

As the returns from Vancouver and Victoria for last year were incomplete, they are not included in the total for this year. During the month of June the total for the other six cities was $124,449,837, as compared with $115,062,608 in June last year. The clearings during June this year were $3,768,864 in Vancouver, and $2,509,456 in Victoria.

MANY CHANGES IN PRICES.

NEW LIST ON HORSESHOES.

PERHAPS the most radical change among the numerous advances that have been made lately was in horseshoes. Iron shoes have been marked up 10c. and steel 25c. per keg. The new and old lists compared in detail are as follows:

Iron Horseshoes	New List.	Old List.
Light and medium pattern, No. 2 and up	$3 50	$3 40
Light and medium pattern, No. 1 and down	3 75	3 65
Snowshoes	3 75	3 65
" No. 1 and down	4 00	3 90
XL Steel Shoes, new light pat'n		
All sizes, 1 to 5, No 2 and up	3 90	3 65
" " No. 1 and down	4 15	3 90
Featherweight		
All sizes. No. 0 to 4	5 15	4 90
Toe weight steel shoes		
All forward	6 25	6 00

These prices are f.o.b. Montreal, f.o.b. add 10c. for Toronto, Hamilton, London and Guelph. Shoes assorted, more than one size in a keg, are 10c. per keg extra.

WIRE AND CUT NAILS ADVANCED.

Buyers who contracted ahead for liberal supplies of cut nails have, as events this week proved, caught the market right, as the base price on this staple line was advanced on Tuesday 10c. per keg to $2.25 f.o.b. Montreal, Toronto, Hamilton, London and St. John, N.B. Best flour barrel nails are 5 per cent. higher, discounts being 30 instead of 35 per cent., and a similar advance has been made in copper nails, which are now sold 35 per cent. off list, instead of 40 as heretofore.

Wire nails are in line with the rest, the base being 10c. per keg higher, at $2.75 to $2.80 in Montreal, and $2.75 in Toronto.

HARDWARE AND METAL only last week predicted that wire nails would shortly advance.

In view of the high prices ruling in the United States, Canadian makers could well afford to further advance their figures on both cut and wire nails.

THE NEW TACK DISCOUNTS.

A radical readjustment of the scale of dscounts on tacks went into effect on Friday, July 7, calling for an advance of all the way from 5 to over 25 per cent. in values.

The lines on which discounts were reduced were: Cheese-box tacks, blued; trunk tacks, black and tinned; carpet tacks, black and tinned; carpet tacks, in kegs; cut tacks, blued, in dozens; swedes cut tocks, blued and tinned, in bulk; upholsterers' tacks, in bulk; trunk nails, black and tinned; clout nails, blued and tinned; picture frame points, and lining tacks, solid heads, in bulk.

The discount applies to the price list of February 10, 1899, and a comparison of the two scales gives the changes in detail, as follows:

	New Scale.	Old Scale.
Strawberry box tacks	75 and 10	75 and 10
Cheese box tacks, blued	85	85 and 10
Trunk tacks, black and tinned	85	85 and 10
Carpet tacks, blued and tinned	80	80 and 10
Carpet tacks, in kegs	40	45
Cut tacks, blued, in dozens only	75 and 5	75 and 12½
Cut tacks, ¼ weights	60	60
Swedes cut tacks, blued and tinned—		
" " in bulk	80 and 12½	80 and 20
" " in doz's	75	75
" upholsterers', bulk	85	85 and 10
" brush, blued and tinned, bulk	50	50
" gimp, blued, tinned and japanned	75	75
Zinc tacks	30	30
Leather carpet tacks	60	60
Copper tacks	50	50
Nails—		
Copper nails	52½	52½
Trunk nails, black	70	70 and 12½
" " tinned	70 and 5	70 and 12½
Clout " blued	70	70 and 10
" " tinned	70 and 5	70 and 10
Chair "	40	40
Cigar box nails	40	40
Patent brads	45	45
Fine finishing	45	45
Picture frame points	20	25
Lining tacks, solid heads, in bulk	75 and 12½	80
Capped Goods on list of December 23, 1898—		
Lining tacks in papers	10	10
" " bulk	15	15
Saddle nails in papers	10	10
" " bulk	15	15
Tufting buttons, 22 lines, in dozens only	60	60
Tin capped trunk nails	15	15
Zinc glaziers' points	5	5

Prices are subject to change without notice, and the terms are the usual four months' approved credit or 3 per cent. discount for cash in 30 days from date of shipment.

WINDOW GLASS DEARER IN MONTREAL.

The spot price of window glass in Montreal, on which jobbers have been predicting an advance for weeks past, has at last responded to the strength in the primary market by an advance of 10 to 25c.

Importers assert that makers in Belgium, in many cases, are not filling their export orders, placed weeks ago, being unable to do so owing to the strike.

With stocks scarce in Montreal, therefore, and supplies not coming forward, it is considered natural that values should stiffen, and the prediction is made that they will continue to do so unless the conditions alter.

The new and old scales compare as follows:

	New List.	Old List.
First break per 50 feet	$1.90	$1.80
Second " "	2.00	1.90
First " 100 feet	3.60	3.50
Second " "	3.80	3.75
Third " "	4.25	4.00
Fourth " "	4.50	4.25
Fifth " "	5.00	4.75
Sixth " "	5.50	5.25
Seventh " "	6.00	5.75

TWO DOLLAR BAR IRON.

About a month ago HARDWARE AND METAL predicted that $2.00 bar iron was close at hand.

This was verified on Tuesday, July 11, when the trade were notified by the makers that the base price on bar iron was $2.00 factory from that date.

This is an advance of 10c. on the previous basis.

Horseshoe iron has also been marked up 10c. from $2.15 to $2.25 base, and both lines are firm at the rise.

LIQUID PAINTS DEARER.

The Canada Paint Co., Limited, Montreal, Toronto and Victoria, have issued a circular announcing an advance of 10c. per gallon in the price of their mixed paints.

The reason given for the advance is the rise in the price of all materials. As compared with 1898, zinc has advanced 50 per cent.; lead, 15 per cent.; linseed oil, 20 per cent.; turpentine, 22½ per cent.

Based on these prices a further advance would be necessary, had not many materials been contracted for before the advances. The trade is advised to carry ample stocks for the fall trade.

This advance applies to all liquid paints, except floor and barn paints. The latter is 5c. per gallon dearer.

CHANGES IN WIRE AND STAPLES.

In line with other material, and as a result of the further increase in the cost of raw material, all kinds of plain wire have been advanced this week by makers. The base price on smooth steel wire, bright, annealed, coppered and tinned, has been advanced 10c. per 100 lb. to $2.70 for Nos. 6 to 9, the base.

Discount off the list price on fine steel wire has also been reduced 5 per cent. to

20 off. This applies to bottling, mattress, broom and bell hanging wire, etc.

There was no change in fence staples, but fine staples, coopers' staples, are 5 per cent. higher, the discount off the list being 50 instead of 55 per cent.

NEW DISCOUNTS ON SHOE TACKS.

A new scale of discounts on shoe finders' tacks, nails, etc., went into effect on July 7, the advance averaging 5 per cent. in prices.

The discounts are on the price list issued April 5 last, which was published in HARDWARE AND METAL shortly after its issue. The new discounts compared with the old are as follows :

Shoe Tacks—	New Scale.	Old Scale.
In Ms	50	52½
In pound papers		
Machine lasting tacks	55	62½
Ordinary tacks	57½	66½
Shoe Nails—		
15 gauge and heavier. Swedes shoe nails.	57½	62½
15 gauge and heavier. Soft steel	62½	62½
15 gauge and heavier. Iron	62½	62½
15 gauge and heavier. Zinc	35	35
Hard steel	35	35
Channel nails	50	50
Hungarian nails	40	45
Miners' tacks	30	35
Hob nails	30	35
Zinc shanknails	35	35
Steel wire shoe rivets	10	15
Brass " " "	20	20
Clinch point duck bill	15	20

Shoe nails, 100 lb. bulk, of one size, not in 1-lb. papers, 25c. per 100 lb. off face of invoice after deduction of discount. Prices are subject to change without notice, and the terms are the usual four months or 3 per cent. 30 days from shipment.

CHANGE IN RAT AND MOUSE TRAPS

The manufacturers of "Out of Sight" rat and mouse traps now have a factory in Canada, and have fixed the jobbers' selling price at the same figure as in the United States. They are enabled to do this on account of having no duty to pay.

The price to the retail trade is 60c. per dozen for mouse traps, and $1.25 for rat traps.

NEW ENAMELED WARE LIST.

A new and a uniform list of prices has been issued this week by the Canadian manufacturers. Heretofore, every manufacturer has had a separate list.

No change has been made in the discounts beyond the fact that all special discounts have been withdrawn.

There is, however, a decided firmness in enameled ware, and an advance of 10 per cent. in the near future is quite possible.

STOVES AGAIN ADVANCE.

The continued appreciation in the cost of raw material has necessitated still another advance in the price of stoves. The advance is 5 per cent.

Hollow ware has been put up in price by the same amount.

A great many orders are being placed for stoves. HARDWARE AND METAL saw one batch of orders which aggregated 15 carloads.

A good percentage of orders had been placed before the recent advance, and a great many even before any of the advances had taken place.

Retailers should not, however, in making up their cost, forget to base it on the prices ruling to-day, and not on those which obtained when they bought, six months or more ago.

HARVEST TOOLS HIGHER.

Canadian manufacturers of harvest tools and other lines announce an advance in prices.

Forks, hoes and rakes are from 15 to 20 per cent. higher. In hay knives, brush hooks, hunters' axes, boys' axes and vegetable scoops there is an appreciation of 25 per cent. Shingle and lath hatchets have also been advanced in price.

It is to be hoped retailers will take advantage of the advances in these lines and base their selling price, not on what their stocks cost them, but what it would cost to replace them at to-day's figures.

The discount on harvest tools is 60 and 5 to 60 and 10 per cent.

PIG TIN MUCH DEARER.

Pig tin has been advancing by leaps and bounds during the past week. On Tuesday there was a reaction, but on Wednesday the market again resumed its upward tendency.

Jobbers in Toronto are quoting 2c. per lb. higher, Lamb and Flag is now held at 33 to 34c., and Straits at 32 to 33c. per lb.

TINPLATES DEARER AND SCARCE.

English cables note a continued advance in the price of tinplates, and, as a result, jobbers' figures on this market are up 25c. per box on charcoal plates, and 25c. to $1 on coke plates.

It is anticipated that the high prices will retard consumption for a while, but, in view of the present condition of the primary market, a high range of values is expected to rule for some time.

Importers are experiencing a great deal of difficulty in getting delivery, and orders placed seven months ago, even for prompt shipment, have not yet been received, nor is there any evidence forthcoming as to when they will.

With regard to Canada plates no complaints are heard, import orders for them coming forward fairly prompt.

LOCKS, DOOR SETS, ETC., HIGHER.

The Gurney - Tilden Lock Co., of Hamilton, and The Peterboro' Lock Co., of Peterboro', have advanced their prices on locks, knobs, escutcheons, door sets and builders' hardware about 10 per cent.

The discount to the retail trade on locks, escutcheon pins and door sets is now 45 per cent., and on builders' hardware 45 and 5 per cent.

LOWER DISCOUNT ON SOIL PIPE.

Standard, medium and extra heavy soil pipe and fittings are dearer, the discount having been reduced to 50 and 10 per cent., Toronto. The former discount was 60 per cent.

SOLDER IS DEARER.

Solder is up from 1½ to 2c. per lb., and half and half is now quoted at 19 to 20c., and refined at 18 to 19c. per lb.

The advances are in sympathy with the appreciation in pig tin.

REAPING HOOKS ADVANCE.

An advance of about 30 per cent. is this week announced in reaping hooks, and the following prices to the retail trade are now quoted : No. 2, $2 ; No. 3, $2.05 ; No. 4, $2.15 ; No. 5, $2.20.

RISE IN MARLIN RIFLES.

Jobbers in Toronto have been advised of an advance of 75c. to $1.50 each in the price of Marlin rifles.

The manufacturers state they have been compelled to put up their prices on account of the cost of steel.

PRICES ON ICE CREAM FREEZERS.

Ice cream freezer manufacturers have notified jobbers in Canada of the withdrawal of quotations. While no new prices have yet been issued, when they do come they will undoubtedly show an appreciation in values.

CARD-WRITING AND WINDOW DECORATION.

WINDOW card-writers and window-designers ought to give more attention to the study of Nature in her more decorative aspects—that is, of flowers, fruits, birds, and all such simple forms of natural things as those which the mind of man instinctively turns to in order to get his ideas of what is decorative and festal. The practical trimmer must study Nature early and assiduously in her decorative aspects, especially on the side of color. With this study of Nature in her decorative aspect must be associated that conscious and deliberate adaptation of her forms to the purposes of practical design, which is a fundamental in all practical work. This, again, is one of the things which the ordinary art student learns to despise in just about the same degree as his powers as a technician become developed, and is, therefore, something which must not be left until his training is very far advanced, but must be taken hold of as one of the fundamentals of his course.

Secondly: The practical window design or card effect means an intelligent grasp of the limitations imposed.

Every trimmer or card-writer cannot hope to always have an abundance of material with which to work. Hence the need of skillful use of what is at hand. Color furnishes the very first element of interest in window decoration, and is the most elementary thing with which the decorator deals, so that its use should be one of the first things with which a window designer becomes familiar. The first work with color may be in such schemes as are represented by stripes and plaids. Study the fundamentals of color theory and the laws of harmony with reference to such elementary uses of color as the forms of ornament represent.

LABEL DESIGNS.

Card-writers are frequently called upon to prepare fancy tickets or labels for shelf and counter goods. Take the matter of color in this connection. The labels may made so as to sell or prevent the sale of the goods. In the colors of labels, plain white, plain buff, and the combination of blue and white are useful. The favorite colors are red and yellow. The writer commends the following colors: (1) Light blue or lilac ground, with flowers in black; (2) crimson ground with flowers of five colors, these for children's clothing; (3) light blue ground with white flowers, for curtains and bed-coverlets.

LANDSCAPE SCENES.

Many of the mistakes made in coloring landscape window illustrations arise from a lack of a proper perception of the conditions under which color is seen, or of the influences colors have upon each other when combined or juxtapered. The colors of a landscape scene in a window will vary according to the light by which it is illuminated. A green tree will appear dull and grey in a low light, in the bright mid-day sun it will appear yellow, in the last rays of sunset it will assume a purple hue. This has bearing on the coloring of window settings as there is a direct connection, as light and shade in any color combination exercise an influence upon the whole effect and upon the individual colors of which it is composed as well.

The quality of one color in the window will vary according to the colors with which it is combined. Make a display with black and blue, black and red, or black and orange, and the quality of the black will be different in each one, although the same material is used in each case. This is simply due to the influence of the color upon the black. The same remark applies to the influence of one color upon another. Not merely does the presence of the different colors influence each other, but their relative quantity and the amount of light and shade, or black and white, also. There are numerous ways of studying and comparing their effects. One of the simplest is to take strips of colored paper or cloth of varying widths and lay them side by side upon white, black or neutral grounds, and compare the effects. When the effects have been noted with the colored strips laid close together, move them slightly apart so that they are separated by a narrow strip of white or black; then move them a little further apart, and careful observation will show that there is a distinct influence upon both colors and ground. If very strong contrasting colors—such as blue and orange, or red and green, are used, the effect is all the more marked. It is best to study color effects in a steady, subdued light, so that the quality of the color can be best observed.

Another simple method of studying color is to sit in a room where there is a stained glass window and note the effect of the light as it passes through the different colored glasses upon a carpet or other object. Whenever the light passing through red glass falls upon a red object, or any color partaking of red, the color is enhanced, whilst other colors will be subdued.

ART AS APPLIED TO TICKET-MARKING.

There are four classifications of ancient types used in modern ticket-writing. First, is the Greek form.

GREEK ART.

Here, delicacy and refinement of treatment, careful study of proportion of figures and letters, and infinite care produce an exquisite art, that is, to-day, a model of all that is best in ticket architecture and decoration.

ROMAN ART.

In the Roman class we have scrolls, and cover them lavishly with acanthus leaves. Indeed, scrolls heavily laden with acanthus leaves surrounding a rosette, have become a sign of recognition in window tickets of this order. This heavy ornamentation soon gets monotonous. Their only originality is manifested in their development of the forms borrowed from others.

SARACENIC ART.

This is not often used by ticket-writers, because the ingenuity of the artist is taxed to create a style that depends entirely upon geometric form and on color for its effect. The result is a theme interlacing with gorgeous colors. Gold is used profusely and the decorations are worked much in relief with stucco effects.

GOTHIC ART.

The last is the Gothic, which is practically a religious style, having grown out of the Christian Byzantine. The arch known in history as the Gothic arch, is a strong characteristic, although other forms are common. The trefoil and quartrefoil are also typical forms. Its exquisite window tracery, built on geometric forms, is a strong mark for recognition.

A PALPABLE MISTAKE.

In our last issue a very serious mistake was made in the advertisement of The Canada Paint Company, and we hasten to correct it. In the second clause of the advertisement it was made to read "the spring trade became active from the 1st of February, and, though the increase of business was 'not' marked, etc.," instead of "increase of business was 'most' marked." This mistake alters the whole sense of the advertisement and has the tendency to deprive the company of the well merited congratulations on the increase of their business which they should otherwise have received.

THE ART OF COLLECTING AND DISTRIBUTING NEWS.

BEFORE the art of printing was invented, the ink-horn and quill pen were the only means of preserving and handing down to posterity records of the times. All books and statements were copied by professional clerks, and a few sentences an hour was considered good progress. With these drawbacks, education was materially handicapped, and we even hear of kings and queens who could not write their own names. Books were expensive—ruinously so, and only the great and rich could afford them. Even one volume was a treasure, and though sometimes the owner could not read, he was happy in possession.

But with the art of printing came, also, a freer distribution of knowledge. With the advance of time and continuous improvement in the art, books became more widely circulated. To be able to read and write was no longer a profession. Improvement after improvement was introduced. News spread much more quickly, and, as decade after decade rolled on, new thoughts and ideas replaced the old ones. The difference of a few centuries is astounding. Caxton, in his wildest enthusiasm, never dreamed of a newspaper. When Victoria came to the throne, the steam engine was unknown. Yet, we have the railway, the steamer, the telegraph, and telephone, and these are quite commonplace. Our daily paper tells us what happens in England, in China, in India, in the uttermost parts of the earth, the very day it happened. What more can the mind of man conceive? Truly, the printer's art has reached perfection! He has all these means at his disposal, and he uses them. From a lack of news, a man is overwhelmed—buried—with so much, he cannot possibly read it all.

How, then, is this mass of news collected and distributed? How does a man receive every item of news bearing on his business? There are 1,200 papers published in Canada—he cannot read all these. Yet, he must know the news. Men in every business used to have this problem to solve. They cannot subscribe to every paper—it would cost a fortune—and, even if they did, the task of reading them and finding what they wanted would prove too great. How, then, can a man receive all the news relating to his particular business without reading all the papers? How can a contractor, broker, banker or wholesaler receive daily every item of news in the Canadian press relating to his own particular business without reading all the Canadian papers—without wading through thousands of pages and tens of thousands of columns of printed matter?

SUPERIORITY

is the product of many elements, each one a little better than it is found anywhere else. A careful selection of raw material, close chemical analysis, the most accurate of formulae, specially designed grinders and mixers, expert workmanship, vigilant superintendence, strict honesty, an experience of over 30 years, and a hundred other elements all combine to give

THE SHERWIN-WILLIAMS PAINT (Prepared)

superiority over all other paints.

Everything we do in paint making has an individual superiority. We strive to do it better than anyone else does. Every detail receives our constant attention, and we are not satisfied until it has reached the highest point of development.

Our methods of pushing the sale of S. W. P. bear the same stamp of superiority as the paint itself, and we want superior men to act as our agents in the towns that are still open.

THE SHERWIN-WILLIAMS CO.

PAINT AND VARNISH MAKERS.

Canadian Division:

Montreal.

CLEVELAND.
CHICAGO.
NEW YORK.
MONTREAL.
BOSTON.
TORONTO.

Here is the solution. He subscribes to The Canadian Press Clipping Bureau, Montreal.

His reading is all done for him. He tells what particular class of news he wants, what he must receive, what it is necessary for him to have, reports from all over the conntry on the condition of crops, of cattle, of mines, or of anything his business is interested in. Every paper in Canada is searched. Dailies, weeklies, every publication, and the items clipped, mounted and set before him daily. He escapes the herculanean task of doing this for himself at a paltry cost. It is not his business to read papers, but it is the business of The Press Clipping Bureau. They do absolutely nothing else. Skilled sharp-eyed readers systematically search the columns of the press and clip the items he wants; they rarely miss one, so great is their experience.

Brokers receive every notice of the sale of bonds, debentures and money transactions; the chief of police everything relating to crimes and criminals, descriptions of bank-robbers, murderers and thieves; contractors, all advertisements of tenders for the erection of buildings, bridges, etc.; the politician every scrap of political news, and material for speeches; the alderman, complete reports of city council meetings in any other or every city in the country; the author, notices of his books and material for new works; private parties, material for scrap books and personal notices. Even the undertaker receives all death notices. Anybody interested in anything for business or private use requires the services of this perfect system of the art of collecting and distributing news.

HIS CAPITAL WAS 40 CENTS.

As an instance of the rapid strides that can be made in this country by pushing young men who don't mind a little hard work the following is told: Mr. Colin McDougall, of Indian Head, arrived there at the age of 18 with the magnificent capital of 40c. For four years he worked as a firm laborer at an average salary of $12 per month. He then rented a half section of improved land at $300 per year with the privilege of purchasing at any time. After two years' work here he bought a half section of land for $4,000 and sold out about June for $7,300, and is now starting in again in the Yellow Grass district with a capital of $6,000 clear.—Free Press, Winnipeg.

FIVE HUNDRED PIGEONS WANTED.

L. S. & B. write: "A customer west wants 500 live pigeons, crated to ship by express. See if an inquiry through your paper would bring a reply."

[Can any of our readers furnish the desired information?—THE EDITOR.]

TRADE CHAT.

THE Bothwell, Ont., correspondent of The Chatham Banner, says: "Nearly all the merchants and professional men who were burned out in last Saturday's fire, are settled in other places, some permanently and others only temporarily. J. Robinson has moved into the eastern apartment of the Johnston block; D. Tait into David Marchbank's block; S. J. Thomas into Marcus, Catto & Co.'s old stand; D. G. Reid into the building recently occupied by Geo. L. Taylor, and Dr. R. Colthurst, V.S., temporarily into Geo. John's shop."

D. N. Traversy & Cie. have registered as tinsmiths in Quebec.

Edward Runions has started in business as tinsmith in Cardinal, Ont.

The Globe Rubber Co., manufacturers of rubber goods, Quebec, has opened a branch in Montreal.

The Chatham Banner states that merchants in that place report trade to be better than for many years.

The Gold Bullion Mining Co. of Ontario, Limited, has been incorporated with headquarters at Fort Erie, Ont.

The Great West Saddlery Co., Limited, with headquarters at Winnipeg, have been incorporated with $250,000 capital.

Application is to be made for the incorporation of The Quebec, Hamilton and Fort William Navigation Co. with headquarters at Hamilton.

A portion of the old Waterous works, Brantford, will be rented to Duncan Black who proposes to start a carriage and wagon making industry there.

The match factory of The E. B. Eddy Co., Limited, employing 120 hands, has shut down for one month. In previous years the factory closed in summer for two months.

The Toronto World states that a very valuable copper mine has been discovered within two miles of Parry Sound, Ont. Two companies have purchased all the claims in the vicinity.

The R. McDougall Co., Galt, Ont., will from now on make iron-working tools in addition to their present manufactures. The firm's shops have been enlarged, and the staff of employes will be largely increased.

The new steel screw passenger boat, the Majestic, built by The Polson Iron Works Co., Toronto, for The Richelieu River Navigation Co., was launched on Wednesday. It will run from Montreal to Lake Champlain.

The deal for the purchase of The Ontario Natural Gas & Oil Co., by The Standard Gas & Oil Co., which has been hanging fire for a year past, has been consummated and the money paid over. The stock of The Ontario has been purchased by The Standard and the sum paid was $600,000. There were 25 shares in the original company. This would make each share worth $24,000. Before the pipes were laid to the wells, shares were sold for $600.

T. W. Jutten, boat builder, Hamilton, has received an order from Montreal for eight gasoline launches, each to cost about $400. Mr. Jutten may increase his boat-building facilities, he having other orders in.

Reports from Parry Sound say that the copper ore in that district is much more valuable than previously reported. Ten weeks ago an American company bought a location, and since then they have quarried from the rock $300,000 worth of ore.

A despatch from Nova Scotia to The Montreal Herald states that The Montreal Rolling Mills will erect a second plant in the vicinity of The Dominion Steel Works at Sydney, Cape Breton, and that they will require at least 1,000 men to start with.

Mr. F. P. Buck, the president of the War Eagle Gold and Copper Mining Company, has given an order to the Jenckes Manufacturing Company, of Sherbrooke, Que., for the machinery required for the development of the property located in Greenwood Camp, B.C.

The James Cooper Mfg. Co., of Montreal, have concluded arrangements, through their Rossland, B.C., branch office, to install on the Sunset claim of the Montreal Boundary Creek Mining Co., in Deadwood Camp, a duplex high pressure Ingersoll-Sergeant 20 drill air compressor, a 300 horse-power battery of boilers, air drills, a complete pumping outfit and a hoisting plant to take care of sinking down to 1,000 feet.

The Canada Atlantic Railway Co., owing to its increasing traffic, will, this fall, commence the erection of large car shops, in addition to those already put up. The new shops will be located near the Rideau roundhouse, where the machine shops and repair works of the company are now situated.

The total fire loss in the United States and Canada for June, compiled by The New York Journal of Commerce, amounts to $6,714,850, against $9,091,900 for May, $9,206,900 for June last year, and $5,684,450 for June, 1897. The total for the first six months of this year is $65,699,750, against $58,237,100 last year and $57,940,450 two years ago.

PERSONAL MENTION.

Mr. J. G. Lewis, of Lewis Bros., who has been spending a well-deserved rest at Cacouna, has returned home much refreshed after his enjoyable trip.

Mr. Barker, representing Harrison Bros. & Howson, cutlery, Sheffield, Eng., was in Toronto last week. It is some years since Mr. Barker was in Canada, and he was much impressed with the progress it had made in the meantime.

AN EXHIBITION OF STOVES, ETC.

Manufacturers of stoves, furnaces, boilers, gas stoves, ranges, and of all sheet metal and sanitary supply products will be comprehensively represented at the National Export Exposition to be held in Philadelphia from September 14 to November 30.

BUSINESS CHANGES.

DIFFICULTIES, ASSIGNMENTS, COMPROMISES.

J. B. McNulty, general merchant, Ange Gardien, Que., has assigned to Lamarche & Benoit.

S. E. Kent, hardware dealer, Wingham, Ont., has assigned to James A. Cline.

Xavier Savard, general merchant, St. Felicien, Que., is seeking an extension.

H. L. Holstein, general merchant, Whitney, Ont., is offering 50c. on the dollar.

Joseph Binette, sash and door manufacturer, Montreal, has obtained an extension.

John A. Bishop, general merchant, Baldoon, Ont., has assigned to Peter Rutherford.

Joseph H. Dionne, general merchant, Garthby, Que., is offering 20c. cash on the dollar.

R. Johnston, harness dealer, Parry Sound, Ont., has assigned to John H. Knifton.

A statement of the affairs of T. G. Clute, general merchant, Stirling, Ont., is being prepared.

U. F. Drouin, wholesale and retail hardware dealer, Quebec, is offering 50c. on the dollar, cash.

A petition for order winding up The Eastern Townships Chrome Iron Mining and Milling Co., Limited, Montreal, has been granted.

PARTNERSHIPS FORMED AND DISSOLVED.

Vezina & Corbeil, contractors, Montreal, have dissolved.

Bowie & Jackson, contractors, Montreal, have dissolved.

Gougeon & Piquette, painters, Montreal, have dissolved.

Gardiner & Mulligan, hardware dealers, Millbrook, Ont., have dissolved, Wm. J. Gardiner continuing.

Carlton A. Berry and Frank B. Wilson have registered partnership under the style of Berry & Wilson, founders, Warden, Que.

Frederick Jackson and Harold Cheesman have registered partnership as contractors, under the style of Jackson & Cheesman, Montreal.

J. W. Gustafson and A. E. Blois have registered partnership as general merchants under the style of Gastafson & Blois, Kennetcook, N.S.

Copartnership has been registered by Charles R. McKean only as general merchant under the style of McKean & Co., Westville, N.S.

Z. Corbeil and F. X. Corbeil have registered partnership as sash and door manufacturers under the style of Z. Corbeil & Frere, Montreal.

Partnership has been registered, composed of Joseph Bowles Learmont, George Caverhill, Thomas H. Newman, and Mrs. Frank Caverhill, under the style of Caverhill, Learmont & Co., wholesale hardware dealers, Montreal.

SALES MADE AND PENDING.

The stock of Mrs. N. Fortin, general merchant, St. Michel (Bellechasse), Que., has been sold at 40c. on the dollar.

CHANGES.

G. W. Bradford, blacksmith, Saltford, Ont., has sold out to —. Goldthorpe.

J. D. Ramsay & Co., general merchants, Plumas, Man., have sold out to A. Chandler.

J. De Langle, general merchant, Whitewood, N.W.T., has sold out to J. A. Hawkes.

Ed. Guilbault, hardware dealer, St. Boniface, Man., has sold out to Romuald Guilbault and Jean B. Cote.

Harold Alexander has registered as proprietor of H. Alexander & Co., dealers in cutlery and siverware, Montreal.

Marie L. Gauthier, wife of Wilfrid Therrien, has registered as proprietress of W. Therien & Co., bicycle dealers, Montreal.

The Tingley & Stewart Mfg. Co. (A. D. Tingley, prop.), manufacturers of rubber and metal stamps, etc., Montreal, have sold out to B. Cairns, who continues under the same style.

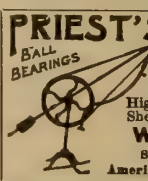
FIRES.

Alex. McKay, blacksmith, Hamilton, Ont., has suffered loss by fire.

DEATHS.

C. Norsworthy, of C. Norsworthy & Co., founders, St. Thomas, Ont., is dead.

PROTECTION WANTED.



Mr. W. S. Scudder, of The Canadian Composing Company, through whom a petition has been in circulation among the members of the Montreal Board of Trade, with a view to getting the Government to join the International Convention for the protection of Industrial Property, said the other day that all English and Latin-speaking countries were now members of the convention, with the exception of Canada, which, either through apathy or official neglect, had failed to join. The convention, which covers patents, trade marks and industrial designs only, was organized in March, 1883, and was acceded to by Great Britain in 1884, with a reservation for Canada and other colonies, all of which have joined except the Dominion. Should Canada become a party to the convention, manufacturers of patented articles here would secure certain export rights without forfeiting patents abroad. The organization gives to a patentee the right to introduce his patent into any of the countries that are members of the convention under the same protection that would be accorded were he a citizen of the country into which he desires his patent to be introduced.

TUBE MAKERS CONSOLIDATE.

THE consolidation of the chief tube manufacturing concerns in the United States appears to be about completed.

The companies which will be included in the proposed consolidation are The National Tube Works Company, The Riverside Iron Works, The Pennsylvania Tube Company, The American Tube and Iron Company, The National Galvanizing Company, The Chester Tube and Iron Company, The Oil City Tube Company, The Cohoes Tube Works, The Syracuse Tube Company, the tube mill of The Allison Manufacturing Company, Morris, Tasker & Co., The Ohio Tube Company and The Oil Well Supply Company.

One of the above companies, The National Tube Works, has a capital of $11,500,000, and the Riverside one of $3,000,000. The Consolidated concern will have a capital of $80,000,000, half in 7 per cent. preferred and half in common stock.

All the tube works in the United States are not, however, in the consolidation, several large companies having decided to retain their own identity.

The consummation of the consolidation will strengthen what is already a strong market.

ELECTRIC FORGES.

One of the astonishing things developed through the introduction of electricity into everyday affairs is a forge made for the bench use, for the heating of soldering irons or light peices of metal for working on the anvil, where the heating is accomplished by plunging the article to be heated into a tray of water, says an exchange. Nothing could be imagined more contradictory of one's preconceived ideas than this procedure, and yet to the electrician it is perfectly simple. He makes the proper connections, plunges his iron into the water, and pretty soon the iron will begin to glow under the water and then to turn red or white hot, just as he desires it for working. When he gets through working the iron, he may plunge it into the water again and cool it with a "siss" as expeditiously as he could in any other tank of water.

This curious forge is made as follows: The tank is of wood or any other other substance which will hold water and not form an electrical conductor. One wire of the electric circuit passes to the bottom of the tank, where it is connected to a plate of metal which lies there. Over this plate water, preferably saturated with salt, fills the tank nearly to the top, and serves to conduct the current to whatever object is to be heated. Nothing could be better for this purpose, for the water naturally closes all about the object and fits it on every side. The other end of the current-conducting wire is fastened to the tongs or led to a metal framework at the edge of the tank on which the tongs or the shank of a soldering iron lie when it is to be heated. The moment the object to be heated is plunged into the water a current passes from the water through the object, and at the same moment some of the water is decomposed by electrolytic action. The nitrogen of the water becomes electrified and adheres to the object to be heated and thus forms a film of gas, which separates the object competely from the water, while at the same time this gas forms such an obstruction to the passage of the electric current that the energy of the current is turned into heat.

Electric forges of various designs are coming into use in the place of fires for many of the blacksmith's operations. One of the new ones offered to the trade is arranged with one of its electrodes mounted at the end of an ordinary anvil, while the other electrode is swung above, where it can be drawn down by the pressure of a foot upon the pedal. The arm above has a wheel-like revolving head, and at the end of the spokes of this wheel are blocks of metal of various forms adapted to fit the objects to be heated. The blacksmith turns down the form that suits his work, presses his foot on the pedal and watches until he has a proper heat, and then, releasing the arm forges and finishes his work on the very anvil where it was heated. Such clever tools cannot, of course, take the place of the old bellows and fire for isolated shops, but in factories they are rapidly being introduced.

A MECHANICAL BRICKLAYER.

The latest device in the way of labor-saving machinery, says the London Mail, is what is described as a "mechanical bricklayer" for use in "automatically laying, cementing, and leveling bricks, slabs, stones and the like in the construction of fortifications, piers, bridges, viaducts, warehouses, dwelling houses and buildings of every description." Such an apparatus has this week been patented in Great Britain and abroad by a Birmingham consulting engineer and his son, who claim that it will save two-thirds of the time occupied in laying bricks by hand. "The mechanical stoker," say the inventors, "has proved a success—why not a mechanical bricklayer?" Of course, one result of the contrivance, if it proves a success, will be to reduce the amount of employment to the bricklayer by hand, and for a time at least, to reduce wages. On the other hand, houses will cost less, and the general public will benefit proportionally, because cheap houses means cheap rents. But it will be time enough to think of all these things when the "mechanical bricklayer" starts laying brick.

A GOOD MOVE.

It is understood The Hamilton City Improvement Society is now an established fact, and has for its president Mr. Steele, of Lucas, Steele & Bristol. The objects of the society are to promote the improvement and beautifying of the city, and to assist and stimulate the authorities in enforcing the laws relating thereto. It is to be hoped that similar societies will be established all over the country.

When one sees the wretched condition of lanes and streets in our towns and cities, the poor sanitary arrangements, and the badly kept lawns and sidewalks, the law respecting noxious weeds a dead letter, it is obvious there is a great need for a wide-spread creation of local improvement societies.

No class probably benefit more from well-kept streets and well-enforced laws than the merchants, and it is to be hoped they will be leaders in this movement.

A PLACE FOR PLEASURE-SEEKERS.

A neat little booklet has just been issued by the New Brunswick Tourist Association descriptive of St. John and the Maritime Provinces, to bring to the notice of the health and pleasure-seeking public the many advantages of climate and condition which are there to be enjoyed. This booklet will, no doubt, come as a revelation to many who are ignorant of the beauty of Acadian scenery, the abundance of fish and game, and the rare climatic features of this country; it is, in truth, the Paradise of the angler and general sportsman. The West Canadian tourist should visit this section of our Dominion in preference to any American seaside resort. In fact, the Americans themselves are showing a preference for Canada.

The booklet itself is an admirable specimen of the printer's art, and is a credit to the publishers.

CATALOGUES, BOOKLETS, ETC.

A GOOD BRUSH CATALOGUE.

The Osborn Manufacturing Co., manufacturers of brushes and brooms, hardware specialties, etc., 44-50 High street, Cleveland, O., have issued a new catalogue of the goods they are putting on the market. It is known as "Catalogue 91." This work includes illustrations and descriptions with prices of more than a score of brooms, and more than a hundred brushes, besides the large number of specialties, such as scrapers, scrubs, washers, dusters, furnace lamps, moulders' rammers and sprues, skate sharpeners, etc. The book is a veritable encyclopædia of these goods, and should often prove of value to the hardware dealer. It is worth sending for.

CHAT WITH A MAN FROM THE KLONDYKE.

"HAVE a talk with F. J. Long," said Mr. T. B. Alcock, secretary of The Gurney Foundry Co., Limited., to me on Thursday afternoon. "He has just come from Dawson City, and may be able to give you some information that will be interesting to readers of HARDWARE AND METAL."

I found Mr. Long about an hour later in his room at the Rossin House. He was preparing to leave for Ottawa.

"Are you in business at Dawson City, Mr. Long?" was my first query.

"Well, yes," was the answer, "but I am not a merchant. Last year I took a Niagara Falls acetylene gas machine and fixtures, and a large supply of carbide from The Wilson Carbide Co., in St. Catharines. I now have the lighting of 15 business houses in the city.

"Is there any competition?"

"Yes, electricity has been introduced, but so far they have lacked power, and where acetylene and electricity have come into competition, the former has won. But it is only a matter of time when electricity will be generally supplied. I believe the owners of the plant are out buying more machinery now.

"We are compelled to supply light from 21 to 23 hours per day during the winter season, and in the summer we have to supply some of the larger buildings with 12 hours' light a day. You see, some of the buildings there are 150 feet, or more, long, and have no windows except at the ends, so artificial light is needed."

"Have prices been as high as reported?"

"As high as any reports I have seen. For materials I have myself needed I had to pay fancy prices. I had to pay $1 to $1.50 per foot for ½ in. pipe; 50c. apiece for ¼ in.; 75c. for ½ in., and $1 apiece for 1 in. fittings. One sale of 200 feet of 1 in. pipe was made at $1.85 per foot, and 30 feet of steam hose was sold for $150, or $5 per foot. But, tell your readers they are too late to get a taste of these prices. Those who need these goods, or expect to need them next winter, are out for them now."

"I suppose that is what you are after?"

"Partly. My first reason for coming out was to see my family." Mr. Long stopped, and handing me photos of two bright boys, about 7 and 9 years old, asked: "They are worth seeing once in a while, are they not?"

Then he continued: "I also desire to patent a gold washing machine, which I have designed and constructed. Of the 150,000 miners in the Yukon district, over 100,000 use the old-fashioned rocker. My machine does the work of 15 such machines. It also saves water, as it will use the same water repeatedly. The miners are eager for me to put them on the market, but I want to protect myself first."

"Will you manufacture them yourself?"

"I will likely have them made in Vancouver. It is the nearest point, and freight rates are important factors in the price of machinery."

"What are the rates from Coast points to Dawson City?"

"From Vancouver, Victoria, or Seattle to Dawson via St. Michael the rates are $100 to $125 per ton. From any of these points to Dawson via Skagway and Lake Bennett it depends on the quantity taken. Over 10 tons, the rate is $165 per ton; over 20 tons, $145 per ton; over 40 tons, $135 per ton. The latter route has the advantage, though, as this is the best way to go in yourself. You can keep your goods ahead of you, whereas the St. Michael route is much slower. If I were sending a very large shipment, I would send it early via St. Michael. When I sent in the acetylene machinery and the carbide, I sent them via New York round the Horn to St. Michael for $140 per ton."

"Are the machines the only goods you will take in?"

"Oh, no! I have personal interest in 22 mining claims, and will need to take a good deal of material in. Included in this will be steamboilers for thawing the frozen ground."

"Are they in general use?"

"All miners get them as soon as they can. In the sinking of shafts and in drifting steam is now playing an important part. A jet of steam inserted four and a half feet in the frozen ground will, by remaining turned on for three hours, thaw from five to seven feet of ground, where, by the old method of thawing by wood fires, 15 to 20 inches is considered a fair burning. My trip will cost me $550, but I expect to save that on the materials I purchase."

"How many dealers in hardware are there in Dawson?"

"There are four or five who carry a regular line of shelf hardware, but nearly all the stores handle it, more or less. The bigger ones, such as The North American Transport and Trading Co., Limited, and The Alaska Commercial Company, carry everything. They have between them over twenty steamers."

Mr. Long brought out some photographs taken in the Yukon district. One of these was a photo of one of the Yukon river steamers. These are stern wheelers with small draught, and are in some cases as large as the Mississippi river boats, which they resemble in appearance. Between 70 and 75 ply the Yukon between Dawson and St. Michael, or Dawson and Lake Bennett.

Another photograph gave a fine view of Dawson. For such a quickly constructed city in the remote Yukon the buildings are very creditable. There are four churches, two hospitals, Salvation Army Barracks and Shelter, two banks and a post office. The last named is small, and a site for a new one has just been chosen.

Mr. Long was enthusiastic in his praise of the law and order in Dawson and vicinity, saying that he believed there was less criminality in that city than in any city of equal population anywhere.

"What is the outlook for permanent prosperity?" I asked, as a concluding query.

"I could hardly say. But, as time goes on, the country will steady down to a less exciting, but more satisfactory business policy. The miners who have good claims now throw away what is known as 10c. dirt, which, with the larger, improved machinery such as is used in British Columbia, would pay well. Men and companies are already applying for bed-rock sluices, for the sake of washing out with such machinery waste dumps and tailings. The waste dumps include the sand considered by miners as too poor to wash, and tailings are the residue left after the imperfect wash they give what sand they do handle. What the country now wants is capital, rather than lebor. A man with $10,000, or a company with $25,000, prepared to buy and develop known properties, would not fail to make a good thing in the Yukon this year or in the years to come."

Mr. Long predicted that excursions to Dawson City would be far from rare in the near future.

COMPOUND FOR CLEANING GLASS.

A mixture for cleaning window glass, according to an exchange, is prepared by moistening calcined magnesia with benzine so that a mass is formed sufficiently moist to let a drop form when pressed. Make the mixture as wanted for use, or else keep it ready prepared in glass-stoppered bottles. For use, dip a pad of cotton wool or rag in the paste, and rub it on the glass to be cleaned, and afterwards polish with a clean duster and chamois leather. Another cleaning compound for the same purpose is to mix one part of olive oil, one part of liquid ammonia, two parts of lime and one part of water to a thick paste.

TRADE IN OTHER COUNTRIES THAN OUR OWN.

THERE is a growing impression in the metal trade that prices for pig lead will take a sharp turn upwards when the smelting company settles its labor troubles.—New York Journal of Commerce.

A WEEK IN PIG TIN.

In its review of the pig tin market, The New York Journal of Commerce, of July 10, says: "A further sharp rise in prices took place the past week. In the New York market the advance was from 26¾c. to 28¼ to 28½c. per lb. In London it was from £121 12s. 6d. to £127 17s. 6d. per ton for prompt delivery, and from £122 12s. 6d. to £129 5s. for three months' futures. In the foreign market there was great speculative activity, contracts representing over 7,000 tons having changed hands. Not one transaction was recorded on the New York Exchange, however, and speculative dealings outside were moderate. Importers and dealers have evidently had enough to engage their attention in looking after ordinary business, which, to all accounts, was of larger volume than might have been expected in view of the extreme high plane of prices. About 1,100 tons arrived, and comparatively little of it came upon the market for sale, several hundred tons having been sold previous to arrival. At the close market value was conjectural, dealers quoted all the way from 28½ to 29c. nominal."

NEW YORK METAL MARKET.

PIG TIN—Some dealers who made low quotations on Tuesday, because of £2 reaction from the highest figures in London, were less nervous yesterday, and did not repeat their low figures. The fact that London reacted £1 over night steadied their nerves, if nothing else. It also had a sort of reassuring effect elsewhere, and, upon the whole, gave tone to the market that was intensified by later advices of an additional £1 5s. rise. However, consumers purchased very conservatively, as did also dealers, and all hands still incline decidedly to careful action, owing to the extreme highness of prices. The line of quotations here at the close was on the basis of about 28⅛ to 28¼c. for five-ton lots, and 28¼ to 28⅜c. for single tons.

COPPER—There were no signs of reaction in the market. In fact, business at prices "under the market," that has not been uncommon after an advance, was not heard of, and "outside" offerings were comparatively small. As for the mining companies, none quoted below 18½c. for Lake Superior ingot, and few, if any, offered copper for delivery prior to the last quarter of the year. Other varieties of the metal are held quite as firmly at 17¼ to 17½c. for electrolytic bars, etc., and 17¼c. for casting stock, according to brand. Dealings are momentarily rather moderate, since those buyers who did not come near future wants earlier in the month purchase in a hand-to-mouth way only at the moment.

PIG LEAD—Buying was rather tame, and inquiries did not appear as numerous as they were earlier in the week. Still, the market lost nothing in point of firmness in tone. Bids of 4.52½c. were refused in several instances, and no lead was obtainable at less than 4.55. As a rule, sellers quoted 4.60 as their lowest price for single carloads or larger lots.

SPELTER—Supplies available for prompt delivery here are again very moderate, and dealers are asking 6¼ to 6⅜c. for ordinary lots from store. Forward shipments are hardening under the influence of strong position at primary points, and 6 to 6.10c. is now quoted as bottom for New York delivery.

ANTIMONY—Jobbing movement of regulus continues good, and prices are steady at 10 to 11c., as to brand.

TINPLATES—The market is momentarily rather slow. Purchases are mostly of small lots and inquiries only fair. Still prices are firm, since about all stock coming forward on contracts is taken up.

IRON AND STEEL—Pig iron was without remarkable change. Highest prices that have ruled latterly prevailed all along the line, and offerings from all quarters were moderate. Deliveries continue heavy, yet cause no unnatural accumulation, although affording evidence that consumers have their wants for some time to come well covered. New business is of very fair proportions for the season, but chiefly in moderate quantities.

Reports from all quarters on manufactured products are roseate, noting activity at mills, fair amount of new business and stiff prices throughout.—N. Y. Journal of Commerce, July 12.

ACTIVE TINPLATE TRADE.

The Liverpool correspondent of The Iron and Steel Trades Journal writes his paper as follows: "In tinplates, prices have indeed been moving very rapidly, and it brings back to one's mind the advances which used to take place in the months before the McKinley Tariff Bill passed. There has been a very large business done; most works are comfortably booked for months to come, whilst some have even fixed themselves up to the end of the year. And still, the demand does not slacken; indeed, the high prices have brought a good deal of business out. There has also been a fair trade passing in ternes, and black plate has experienced a good call, both on continental and American account."

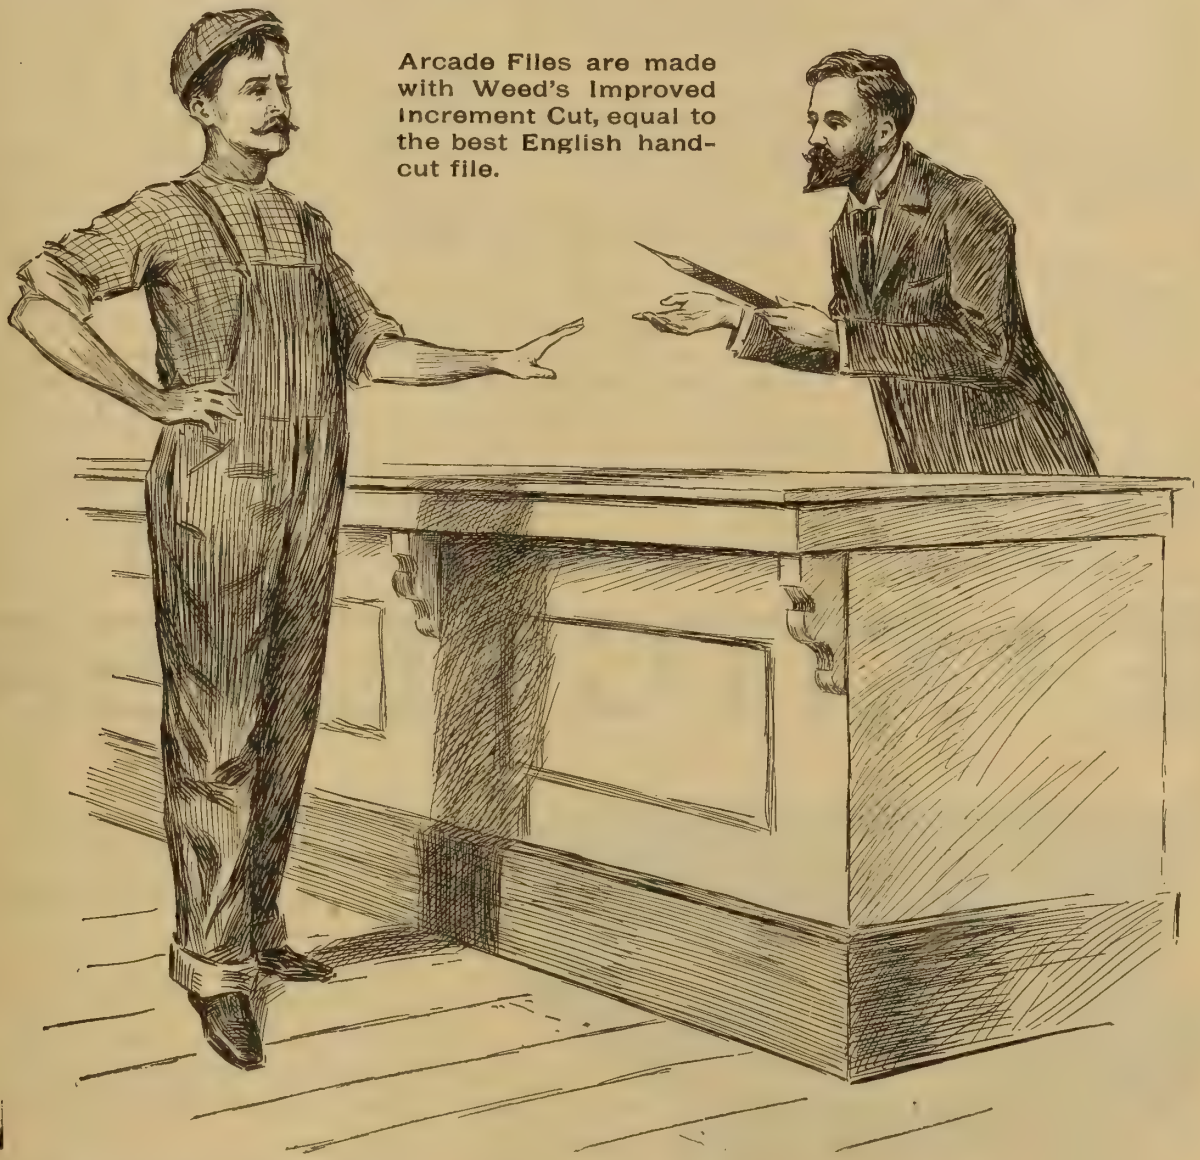
PIG IRON IN SCOTLAND.

On the Glasgow exchange the week opened with news of further advances in American prices, and reports of enormous sales for future delivery at full rates. On this, Scotch warrants were bid up to 67s. 3½d. cash, and 67s. 6d. one month. These are the highest prices recorded for the week, but the market has not fallen more than 6d. under these figures, and closes to-day at 67s. 4d. cash, an advance of 5d. per ton since last Friday. The shipments of pig iron from the Clyde have a rather more satisfactory appearance, as the area of distribution is widening, and small lots are being sent to unusual markets. Makers' quotations for shipping brands are higher than ever, and No. 1 Coltness is now quoted at 73s. 9d., and Gartsherrie at 72s. 6d. The cheapest brand, Govan, is held at 68s. 6d. There is no alteration in Connal's stocks at Glasgow.—Iron and Steel Trades Journal, June 24.

WIRE AND WIRE NAILS IN THE UNITED STATES.

In the Cleveland and Pittsburg districts repairs are still in progress at some of the plants. Demand is well maintained. For wire it is greater than the mills had counted on. There is no change in prices. Net cash in 30 days are now strict terms, though jobbers are are giving 60 days. We quote: Wire nails, $2.35, Pittsburg, in carload lots to jobbers; smooth wire, $2.20 to jobbers in carload lots; painted barbed wire, $2.45; galvanized, $2.95.—Iron Trade Review, July 13.

AN ENTHUSIASTIC TRAVELER.



T. W. Sissons, of Sissons Bros., Hull, England, passed through Montreal this week with his son on his way home from a trip to China and Japan. He came via C.P.R. from Vancouver. He is enthusiastic over the condition of Canadian trade and is well satisfied with the progress of his branch in Canada. The business here has been very much in excess of what he anticipated when starting. Mr. Sissons intended staying much longer in Montreal, but his trip had been so long that the nearer he got to home the more anxious he became, and when he became satisfied with the excellent results of the Canadian branch he hurried on to New York, and sailed from there on July 13.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

MONTREAL July 14, 1899.

HARDWARE.

THERE have been general and radical advances throughout almost the entire list since last report, and the market is buoyant at the rise. It is no wonder, therefore, that traders are manifesting more and more anxiety to place orders ahead. The changes are referred to in detail elsewhere, among the more notable being advances in smooth steel wire, fine staples, wire and cut nails, horseshoes, bolts and rivets, and, in other lines, though no changes have transpired, strength is quite pronounced.

BARBED WIRE—Trade is quiet in barbed wire, but prices are firmly held on the basis of $3 f.o.b. here.

SMOOTH STEEL WIRE—There has been an advance of 10c. in this line, and inquiry is better. We quote the base $2.70 for Nos, 6 and 9.

FINE STEEL WIRE—An advance of 5 per cent. has been made in this article, discounts being 20 per cent.

GALVANIZED WIRE — A fair demand is noted, and prices are firm at $3 for No. 9.

BRASS AND COPPER WIRE — Quiet and unchanged. We quote discounts 50 and 2½ per cent. on brass, and 45 and 10 per cent. on copper.

FENCE STAPLES—These are unchangad. We quote: $3.05 for bright and $3.65 for galvanized per keg of 100 lb.

FINE STAPLES—The only change is in coopers', which are 5 per cent. higher. Discounts are: Cooper, 55; poultry netting, 45, and electrician, broom, bed, etc., 40 per cent. off.

WIRE NAILS—The base price for this line has been advanced to $2.70, and demand is fair.

CUT NAILS—These are 10c. per keg advanced on last week's basis at $2.25 f.o.b. Montreal, Toronto, Hamilton, London and St. John, N.B. Business is fair.

HORSE NAILS — Without feature, and discounts unchanged at 50 per cent. on standard and 50 and 20 on Acadia.

HORSESHOES—There has been a rise in these of 10c. on iron and 25c. on steel shoes. We quote as follows: Iron shoes, light and medium pattern, No. 2 and larger $3.50; No. 1 and smaller, $3.75; snow shoes, No. 2 and larger, $3.75; No. 1 and smaller, $4; X L steel shoes, new light pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; featherweight, all sizes, Nos. 0 to 4, $5.15; and toe weight steel shoes, all forward, all sizes $6.25 f.o.b. Montreal, St. John, N.B., and Halifax, N.S. Delivered f.o.b. in Toronto, Hamilton, London and Guelph 10c. per 100 lb. extra.

SCREWS—In fair demand and steady. Discounts are: Flat head, bright, 82½ and 5 per cent; round head do., 75 and 5; flat head, brass, 75 and 5; round head do., 67½ and 5.

BOLTS—These are firm at the rise noted last week. Discounts are: Carriage bolts, 5-16 and smaller, 55 per cent.; ⅜ and up, 50 per cent.; full square bolts, 65 per cent.; machine bolts, 55 per cent.; coach screw bolts, 67½ per cent., and sleighshoe bolts, 72½ per cent.

NUTS AND WASHERS—There has been a

decline on these. We quote: Square, 3¾c. and hexagon 4¼c. per lb.; discount off list. Washers in 50-lb. boxes are 50 per cent. discount.

RIVETS—These are 5 per cent. higher all round. Discounts now are: Black and tinned, 45 per cent.; ditto burrs, 40 per cent.; copper rivets and burrs, 35 per cent.

CORDAGE—Business has been fair since the advance last noted. We quote as follows: Manila, 7-16 and up, 12c.; ⅜, 12½c., and ¼ and 5-16, 13c. Sisal, 10¾c. for 7-16 and up; 11¼c. for ⅜, and 11¾c. for ¼ and 5-16. Binder twine: Pure manila, 10½c.; 550 feet, 10c.; sisal, 500 feet, 9½c.

CEMENT—Quiet and steady. We quote: Belgian, $1.90 to $2.10; English $2.30 to $2.40, and German, $2.45 to $2.65, per cask ex wharf.

FIREBRICKS—In fair request and steady at $12 to $23 per 1,000 as to brand.

METALS.

The buoyancy in all kinds of iron and metals continues, and any alterations there are to note are in an upward direction.

PIG IRON—Contracts have been few, but values are firm, $21.50 having been refused for Hamilton pig, with $22 asked.

BAR IRON—The prediction of $2 bar iron has been verified, prices touching that figure on Tuesday for less than car lots.

BLACK SHEETS—Firm at the rise. We quote: 8 and 16, $2.35; 18 and 20, $2.05; 22 and 24, $2.25; 26, $2.35, and 28, $2.40.

HOOP IRON—Steady, at $2.45.

STEEL—Without change. We quote: Sleighshoe and tire, $2.50; spring, $2.70; machinery, $3, and toe calk, $3.

GALVANIZED IRON — With stocks in small compass, values are firm. We quote: Queen's Head, $4.55 to $4.80; Comet brand, $4.30 to $4.55, according to the size of the order.

INGOT COPPER—Has continued firm at 19½ to 20c.

INGOT TIN—Jobbers have advanced their price on ton lots to 32c.

PIG LEAD—Without new feature at $4.25.

LEAD PIPE—Discounts reduced to 20 off. We quote ordinary, 7c.; composition waste, 7½.

IRON PIPE—Firmly held. We quote: Black pipe, ⅛ and ⅜-inch, $3.12; ½-inch, $3.09; ¾-inch, $3.72; 1-inch, $5.14; 1¼-inch, $6.82; 1½-inch, $8.66, and 2-inch, $11.02. Galvanized pipe, ⅛ and ⅜-inch, $5.64; ½-inch, $6.64; ¾-inch, $7.41; 1-inch, $10.12; 1¼-inch, $14.03; 1½-inch, $17.16, and 2-inch, $23.

CANADA PLATES — Values stiff at the recent advance. We quote: 52's, $2.30;

Open Hearth Steel

60's, $2.40; 75's, $2.50; full polished, $3.15; galvanized Canada plates, $4.25 for 52's.

TINPLATES—Firm, with advances noted in some of the higher grades. We quote as follows: Coke, I. C., $3.75; charcoal, I.C., Allaway or Comet brands, $4; do. I. X., $4.50; Lincoln, $4; P. D. Crown, $4.50; do. I. X., $5.50; Bradley's, $6.25.

TERNE PLATE—Prices on this article continue to stiffen, from $6.75 to $7, being asked this week.

COIL CHAIN — Firm. We quote: No. 6, 10¾c.; No. 5, 9¼c.; No. 4, 8¼c., and No. 3, 7¼c. per lb.; ¼-inch, $6; 5-16, $4.75; ⅜, $4.25; 7-16, $4.10; ½, $4; 9-16, $3.95; ⅝, $3.85; ¾, $3.65, and ⅞, $3.55 per 100 lb.

SHEET ZINC—Firmly held at 8 to 8¼c.

ANTIMONY — Inactive but firm, at 10 to 11c.

SPELTER—Without change, at $7.

GLASS.

There has been an advance of 10 to 25c. in window glass. We quote: First break, $1.90; second, $2 for 50 feet; first break, 100 feet, $3.60; second, $3.80; third, $4.25; fourth, $4.50; fifth, $5; sixth, $5.50, and seventh, $6.

PAINTS AND OILS.

The only actual change in this branch of trade is an advance in the price of turpentine of 2c., as a result of greater strength in the South. Mixed paints are fairly active and steady, and no changes are to report in oils. We quote:

WHITE LEAD—Best brands, Government standard, $6.00; No. 1, $5.62½; No. 2, $5.25; No. 3, $4.87½.

DRY WHITE LEAD—$4.75 in casks; kegs, $5.

RED LEAD—Firm; casks, $4.75; in kegs, $4.50.

WHITE ZINC PAINT—Pure, 8c.; No. 1, 6½c.; in oil, pure, 9c.; No. 1, 7½c.

PUTTY—We quote: Bulk, $1.65; bladders, in bbls., $1.80; bladders, in cases, $1.95; in tins, $2.05 to $2.30.

LINSEED OIL—We quote: Raw, 57c.; boiled, 58c., five to nine-barrels, 1c. less, ten and twenty-barrel lots open, net cash, plus 2c. for 4 months. Delivered anywhere in Ontario between Montreal and Oshawa at 1c. per gallon advance and freight allowed.

TURPENTINE—One to four barrels, 59 to 60c., two to four-barrel lots, 1c. less, five barrels and over, open terms, the same terms as linseed oil.

MIXED PAINTS—Firm; $1 to $1.20 per gallon.

CASTOR OIL—Firm; at 7½ to 8c.

SEAL OIL—35½ to 37½c.

COD OIL—35 to 37½c.

NAVAL STORES—There is an improved demand for all lines, and prices show no change. We quote as follows: Resins, $2.75 to $4.50, as to brand; coal tar, $3 to $3.50; cotton waste, 4½ to 5½c. for colored, and 6 to 7½c. for white; oakum, 5½ to 6½c., and cotton oakum 9 to 11c.

PARIS GREEN—We quote: 250-lb. casks, 13½c.; 50-lb. drums, 14c.; 1-lb. packages, 15c.; ½-lb. packages, 16½c.; 1-lb. tins, 15½c.

PETROLEUM.

A fair trade is noted, and values are unchanged. We quote as follows: Crown Acme, the new Sarnia oil, 15½c.; Perfection and Silver Star Canadian refined, 14½c.; American prime white, 17c.; water white, 18c., and Pratt's astral, 19½c., in small quantities.

HIDES.

Some sales of beef hides have been made for shipment to the United States. Prices are steady at 9, 8 and 7c.; calfskins, 11 and 9c.; lambskins, 30c. each, and sheepskins, 85c.

COAL.

Business quiet. We quote: Stove, $5.75; chestnut, $5.75; egg, $5.50; Scotch grate, $6; Scotch steam, $4 to $4.50; Tower ports steam, $3.50 to $3.75.

MONTREAL NOTES.

Turpentine has been marked up 2c. here.

Cut and wire nails have both been marked up 10c.

Bolts are about 2½ per cent. higher than they were.

Smooth steel wire is 10c. advanced on the old basis.

Window glass is 10 to 25c. higher than it was last week.

Coke tinplate has been marked up another 25c., also ternes.

Iron horseshoes are 10c. higher and steel 15c. higher than last week's level.

The Sherwin-Williams Co. held a picnic at Isle Gros Bois on Thursday, July 13. A full account will appear next week.

ONTARIO MARKETS.

TORONTO, July 14, 1899.

HARDWARE.

THE past week has been a remarkable one for the advances in prices which have taken place in a good many staple lines of hardware. Wire and cut nails are both 10c. per keg dearer. The base price of smooth wire has been advanced 10c. per 100 lb. Horseshoes are 10c. dearer. The discounts on factory milk cans and milk can trimmings have all been reduced. Stamped and pieced ware is dearer by 12½ per cent. On tacks there has been an advance. Stoves and hollow ware are 5 per cent. dearer, and the enameled ware manufacturers have withdrawn special discounts which have been existing for some time. Many lines of harvest tools have also been advanced. The

WRITE TO

Luxfer Prism Co., Limited.

58 Yonge St., Toronto.

American manufacturers of ice cream freezers have notified the jobbers of the withdrawal of prices, which, of course, means an advance in price. Canadian makers of locks, knobs, escutcheons, door sets and builders' hardware have advanced their prices 10 per cent. Reaping hooks are dearer. Marlin rifles have been advanced from 75c. to $1.50 each. In general, the hardware market is characterized by a much stronger feeling. The demand for smooth steel wire is fairly good, and, this week, there has been a slight improvement in the demand in hay-baling wire. Wire nails are meeting with a fairly good demand, but cut nails are still quiet. A slightly better demand is to be noted for horse nails. Horseshoes are still quiet. The screw trade keeps good, and the same can be said of bolts, rivets and burrs, Churns and wringers are still meeting with a fair demand. Harvest tools are going out well. Screen doors and windows and green wire cloth are still scarce. A good many letter orders are coming to hand, while payments are still fair.

BARBED WIRE—There is a little doing in wire, but prices are firm and unchanged at $3.25 per 100 lb. f.o.b. Toronto.

SMOOTH STEEL WIRE — Probably the feature in this line is an improved demand for hay-baling wire, the seasonable movement having set in. In oiled and annealed wire trade is fair. The base price is 10c. higher at $2.70 f.o.b. factory.

GALVANIZED WIRE — There have been no new developments in this line during the past week. The volume of business is moderate, and prices are unchanged at quotations. We quote: Nos. 6, 7, 8 gauge, $3.40; No. 9, $2.90; No. 10, $3.50; No. 11, $3.55; No. 12, $3.05; No. 13, $3.15; No. 14, $3.90; No. 15, $4.50; No. 16, $4.65.

WIRE NAILS—HARDWARE AND METAL, last week stated that an effort was being made to advance the price of this line. The effort has proved successful, for we, this week, quote 10c. per keg higher, at $2.75 f.o.b. Toronto.

CUT NAILS—These have also been advanced 10c. in price, the quotation to-day being $2.25 f.o.b. Toronto, Hamilton and London. Quite a demand has sprung up during the past week for 4 and 4½d. shingle nails.

HORSE NAILS — There is a little better demand for this line, and prices are unchanged. We quote: Standard, oval head, 50 per cent.; Acadia, countersunk head, 50 and 20 per cent.

HORSESHOES— The feature in regard to horseshoes is an advance of 10c. per keg in price. Business is still moderate. We quote f. o. b. Toronto, Hamilton, London and Guelph: No. 2 and larger, light, medium and heavy iron shoes, $3.60; snow shoes, $3.85; light steel shoes, $4.00; featherweight shoes, all sizes, $5.25. No. 1 and smaller, light, medium and heavy iron shoes, $3.85 per keg; iron snow shoes, $4.20; light steel shoes, $4.15; featherweight steel shoes, all sizes, $5.25.

SCREWS —A good trade continues to be done in screws at firm and unchanged prices. We quote as follows: Flat head bright, 82½ and 5 per cent. off the list; round head bright, 75 and 5 per cent.; flat head brass, 75 and 5 per cent.; round head brass, 67½ and 5 per cent.; flat head bronze, 67½ and 5 per cent.; round head bronze, 62½ and 5 per cent.

BOLTS—The discounts have been reduced on all lines except those which were changed last week. The demand keeps good. We quote: Norway bolts, full square, 65 per cent.; common carriage bolts, 5-16 and under, 55 per cent.; ditto, ⅜ and larger, 50 per cent.; ditto, full square, 65 per cent.; machine bolts, all sizes, 55 per cent.; coach screws, 67½ per cent.; sleighshoe bolts, 72½ per cent.; blank bolts, 55 per cent.; bolt ends, 62½ per cent.; nuts, square, 3¾c.; nuts, hexagon, 4¼c.; tapping nuts, 60 per cent.; tire bolts, 60 and 10 per cent.; stove bolts, 60 and 10 per cent.

RIVETS AND BURRS — Trade continues fairly good and prices are firm and unchanged. We quote: Carriage section, wagon box rivets, etc. (steel), 60 per cent. off the list; ditto (Norway iron), 55 per cent.; black M rivets, (steel) 60 per cent.; ditto (Norway iron), 45 per cent.; iron burrs, 40 per cent.; copper rivets, 35 per cent.; bifurcated, with box, $1.25; coppered iron rivets and burrs, in 5-lb. carton boxes, 30c. per lb.

ROPE — There is a moderate business doing and prices are steady at the recent advances of manila rope, We quote as follows: Sisal, 7-16 in. and larger, 10½c. per lb.; ⅜ in., 11c.; ¼ and 5-16 in., 11½c. Manila, 7-16 in. and larger, 12c. per lb.; ⅜ in., 12½c.; ¼ and 5-16 in., 13c.; New Zealand, 9½c. per lb.; Deep sea line, 13½c. for water laid, and 14½c. for machine-made; hemp, 7 to 9c.; lath yarn, 8¾c. Clotheslines, 48 feet, 90c.; 60 feet, $1.20; 72 feet, $1.50; 100 feet, $2.

CHURNS — Business continues good and prices are unchanged. We quote as follows: Metal frame—No. 0, $3; No. 1, $3.20; No. 2, $3.40; No. 3, $3.75; No. 4, $4.50; No. 5, $5.90. The price of wooden frames is 15c. per churn less than the above. Terms, 3 per cent. off 30 days f.o.b. Toronto.

WRINGERS—A fair trade is still noted in this line. We quote as follows: "Leader," $60 per doz.; "Royal Canadian," $58; "Royal American," $48. Prices are all f. o. b. Toronto, Hamilton, Brockville, and Montreal. Discount, 45 per cent. Terms, four months, or 3 per cent., 30 days.

ICE CREAM FREEZERS—There is a decidedly strong feeling as to prices, and jobbers have been notified by American manufacturers, who now largely supply the Canadian market, that prices have been withdrawn. When the new figures come out they are naturally expected to show advances.

BUILDING PAPER—Trade continues fair and without any features. We quote as follows: Plain building, 28c. per roll; tarred lining, 35c., according to quality; tarred roofing felt, $1.40 per 100 lb.; carpet felt, $2.25 per 100 lb.

GREEN WIRE CLOTH—There is still a scarcity, and prices are firm and unchanged at $1.75 per 100 square feet.

POULTRY NETTING—A moderate demand is reported at the unchanged discount of 50 per cent.

SCREEN WINDOWS AND DOORS — The situation, as far as supplies are concerned, is most unsatisfactory, it still being almost impossible to get delivery. Of course, it is now getting towards the close of the season, as far as the wholesalers are concerned.

SPADES AND SHOVELS—There is not a great deal doing, and the discount is unchanged at 40 and 5 per cent.

HARVEST TOOLS, ETC.—Prices have been advanced about 15 to 20 per cent. on forks, hoes and rakes. On such goods as hay knives, brush hooks, hunters' axes, boys' axes and vegetable scoops, prices are about 25 per cent. higher. The discount on harvest tools is now 60 and 5 to 60 and 10 per cent.

STOVES— Manufacturers have advanced prices 5 per cent. A large business is being done.

OIL AND GAS STOVES —Are unchanged. Business is good in regard to both oil and gas stoves.

ENAMELED WARE — A new uniform list has been issued by the manufacturers, and, while the regular discounts are unchanged, the special discounts have been withdrawn and an actual advance in prices shortly is not improbable.

TINWARE—There is a seasonable trade being done in tinware and business is being maintained in this line much better than is usual at this season of the year.

CAST IRON FITTINGS—Prices have been advanced, the discount now being 50 per cent. instead of 55 per cent. as before.

CEMENT — A brisk demand is noted. Prices are firm and unchanged. We quote in barrel lots as follows: Canadian Portland, $2.65 to $2.90; English do., $3; German do., $3.10; Belgian do., $2.70; Canadian hydraulic cements, $1 to $1.10; calcined plaster, $1.90; asbestos cement, $2.50 per bbl.

REAPING HOOKS — There has been an advance of 30 per cent. in the price of reaping hooks, and we now quote as follows: No. 2, $2; No. 3, $2.05; No. 4, $2.15; No. 5, $2.20.

SPORTING GOODS — Shipments of guns, rifles, loaded shells and powder have been large during the past week, the season now having opened up for this class of goods. As a large trade is to be expected this season, dealers would do well to place their orders early.

METALS.

There is a decidedly strong feeling all round in metals, and in many lines there have been actual advances.

PIG IRON — The market is strong and trade fairly good. We quote Hamilton iron at $18.50 to $19 for No. 1. at the furnace.

BAR IRON — Bar iron has advanced another, 10c. and we now quote $2 base at factory. Trade is exceedingly brisk.

BLACK SHEETS—Trade is fairly active in this line and the price is firm at $3.00 for 28 gauge.

GALVANIZED IRON—While the laid-down cost of galvanized iron is rather higher, jobbers' quotations to the retail trade remain unchanged. The demand for galvanized iron continues brisk, while stocks are rather light. We still quote 28 gauge at $4.75 per 100 lb.

COPPER—Ingot copper has been selling freely during the past week at firm prices. A good business is also being done in sheet copper. The only change to note is an

advance of ½c. per lb. in braziers' sheets, the figures ranging from 23½ to 25½c. Ingot is unchanged at 19 to 19½c. per lb.

BRASS—Prices are unchanged, but there is not as much business being done as there was.

PIG TIN—The outside markets have been very excited during the past week, and prices rule much higher than before. Locally, quotations are up 2c. per lb., and we now quote Straits at 32c. to 33c., and Lamb and Flag at 33 to 34c. per lb.

TINPLATES—The market in England, according to cable dispatches, is still advancing, and as a consequence prices here are about 25c. per box higher on charcoal plates and 35c. to $1 on coke plates. It is very difficult to get delivery of tinplates, and orders placed in January last for prompt shipment have not yet arrived. The outlook is for strong prices.

CANADA PLATES—Prices are unchanged at $2.75 for all-dull and $2.85 for half-polished and $3.20 for all-bright. Business is increasing, although the volume is still small.

IRON PIPE — The market is still very strong, and the only thing that prevents a further advance in prices locally is the fact that some of the jobbers have large stocks on hand. An advance, however, in the near future, is expected. In fact, we know of one house which has already marked its figures up. We quote: ⅜ to ⅜ inch, $3.10; ½ inch, $3.25; ¾ inch, $3.80; 1 inch, $5.25; 1¼ inch, $7; 1½ inch, $8.75; 2 inch, $12; 2½ to 6 inch, discount 50 per cent. Galvanized pipe: ½ inch, $6.50; ¾ inch, $8; 1 inch, $11; 1¼ inch, $15.25; 1½ inch, $19; 2 inch, $27.

PIG LEAD — Trade is fair and prices steady at 4¼ to 4½c. per lb.

LEAD PIPE—Is in fair demand and unchanged at last week's reduction. The discount is still 20 per cent. The list price is 7c. for ordinary pipe and 7½c. for waste.

RANGE BOILERS — Business continues good and prices firm. We quote; Galvanized, 30 gals., $9; 35 gal., $10; 40 gal., $11. Copper, 30 gal., $22; 35 gal., $26; 40 gal., $30; discount off copper boilers, 10 per cent.

COIL CHAIN — Prices are firm and business only moderate. We quote: ¼ in. $6.75; 5-16 in., $4.75; ⅜ in., $4.30; 7-16 in., $4.15; ½ in., $3.05; ⅝ in., $3.85; ¾ in., $3.75.

SHEET ZINC—Trade in this line is a little more active than it was, and prices are unchanged at 8¼c. for cask lots and 8½c. for smaller quantities.

SPELTER —Much the same remarks apply to this as to sheet zinc. We quote 7½ to 7¾c. per lb.

SOLDER—As is natural, this line is advancing in sympathy with tin, and we quote half and-half at 19 to 20c., and refined at 18 to 19c. Trade in this line is decidedly brisk, dealers showing their confidence in the market by placing heavy orders.

SOIL PIPE—There has been an advance in standard, medium and extra heavy soil pipe, and the discount is now 50 and 10 per cent. Toronto and east and west.

ANTIMONY — Remains quiet and unchanged at 11 to 11½c. for Cookson's.

PAINTS AND OILS.

The feature of the market is the advance in turpentine, which is 4c. dearer than a week ago. The cause of the rise is higher prices on the primary market, where manipulation and a shorter crop than was expected are causing a stiff upward tendency. There is a good movement, as still higher prices are looked for. Other materials are in moderate demand, though the summer dullness has set in. Travelers are off the road. Prices throughout are steady. We quote:

WHITE LEAD—Ex Toronto, pure white lead, $6.12½; No. 1, $5.75; No. 2, $5.37½; No. 3, $5; No. 4, $4.62½; dry white lead in casks, $5.10.

RED LEAD—Genuine, in casks of 560 lb., $4.90 to $5; ditto, in kegs of 100 lb., $5.15 to $5.50; No. 1, in casks of 560 lb., $4.75; ditto, kegs of 100 lb., $5.

LITHARGE AND ORANGE MINERAL—We quote: Litharge, 6 to 6½c.; orange mineral, 7½ to 8½c.

WHITE ZINC—Genuine, French V.M., in casks, $7 to $7.25; Lehigh, in casks, $6.

PARIS WHITE—We quote 90c.

WHITING — 55c. per 100 lb.; Gilders' whiting, 85c.

GUM SHELLAC—In cases, 24c.

PLASTER PARIS — Ordinary, $1.75 per barrel; New Brunswick, $2 per barrel.

PUMICE STONE—Powdered, $2.50 per cwt. in barrels, and 4 to 5c. per lb. in less quantity; lump, 10c. in small lots, and 8c. in barrels.

LIQUID PAINTS—Pure, $1 per gallon; No. 1 quality, 90c. per gallon.

SEAL OIL—Is quoted at 59 to 60c. per gallon, and yellow seal at 49 to 50c.

CASTOR OIL—East India, in cases, 9c. per lb. and 10c. for single tins.

LINSEED OIL — Quotations to outside western points are (freight allowed): Raw, 1 to 4 barrels, 57c.; boiled, 1 to 4 barrels, 60c. Prices in Toronto, Hamilton, London, are 1c. per gallon less.

TURPENTINE—We quote for outside western points, freight allowed, 1 to 4 barrels, 65c.; in less quantities than barrels, 5c. per gallon extra will be added and packages charged for. Prices in Toronto, Hamilton, and London are 1c. less than the above. Terms, net 30 days.

GLASS.

The non-arrival of import glass is causing much trouble for the jobbers, but, as they are doing their utmost to hurry their orders, they are not worthy of the blame put upon them by some retailers for not having their glass ready for them. One shipment has been received in Montreal by a Toronto house, but no import orders are expected before August. Meanwhile, prices in Belgium are steadily advancing, so, when the glass does arrive, there will be good profit on it for importers. Stock prices in Toronto are firm, but unaltered, at the following figures: Star, first break in 50-foot boxes, $2, and in 100-foot boxes, $3.75; double diamond under 25 united inches, $6, Toronto Hamilton and London; terms 4 months or 3 per cent. 30 days.

OLD MATERIAL.

An advance of 5c. is noted on iron scrap. Copper and brass are ½c. dearer. The feeling is firm at the rise. We quote as follows: Agricultural scrap, 55c. per cwt.; machinery cast, 60c. per cwt.; stove cast scrap, 45c.; No 1 wrought scrap, 55c. per 100 lb.; new light scrap copper, 13c. per lb.; bottoms, 11½c.; heavy copper, 15c.; light scrap brass, 7½c.; heavy yellow scrap brass, 10c.; heavy red scrap brass, 10½c.; scrap lead, 2½c.; zinc, 3c; scrap rubber, 4c.; good country mixed rags, 65 to 75c.; clean dry bones, 45 to 50c per 100 lb.

COAL.

Business has improved greatly, and now orders are so good that jobbers are six to seven days behind in their orders. The advance of 25c. per gross ton is well maintained. We quote anthracite for July delivery at Buffalo and bridges: Egg, stove and nut, $4.50 per gross ton, or $4.01 per net ton; grate, $4.25 per gross ton or $3.79 per net ton.

MARKET NOTES.

Harvest tools are 15 to 20 per cent. dearer.

Import orders of glass are not expected before August.

The price of reaping hooks has been advanced 30 per cent.

Pig tin, tinplates, solder and braziers' sheets are all dearer.

Cut and wire nails and smooth steel wire are quoted 10c. dearer.

The discount on soil pipe has been reduced to 50 and 10 per cent.

Turpentine has advanced 4c., and is now selling at 64c. Toronto and 65c. at outside points.

Scrap iron is 5c. per cwt. dearer. Scrap brass and copper have advanced ½ to 1c. per lb.

H. S. Howland, Sons & Co., are in receipt of a shipment of Pieper's breach-loading guns. The firm reports that it has a good stock of American "Dead Shot" and Schultze's hard-ground smokeless powders.

NICHOLSON FILE CO., Providence, R.I., U.S.A.

BRITISH PLATE GLASS COMPANY, Limited. Established 1773.

Manufacturers of **Polished, Silvered, Bevelled Chequered, and Rough Plate Glass.** Also of a durable, highly-polished material called "**MARBLETTE,**" suitable for Advertising Tablets, Signs, Facias, Direction Plates, Clock Faces, Mural Tablets, Tombstones, etc. This is supplied plain, embossed, or with incised gilt letters **Benders, Embossers, Brilliant Cutters, etc., etc.** Estimates and Designs on application.

Works: Ravenhead, St. Helens, Lancashire. Agencies: 107 Cannon Street, London, E.C.—128 Hope Street, Glasgow—12 East Parade, Leeds, and 36 Paradise Street, Birmingham. Telegraphic Address; "Glass, St. Helens." Telephone No. 68 St Helens.

AGRICULTURAL EARNINGS AND TRUSTS.

AT the closing session of the Industrial Commission last week, says Bradstreets, Mr. G. K. Holmes, of the Agricultural Department, furnished statistics showing that the average per capita earnings of farm laborers in the United States amount to $225 per annum, without board, compared to $227 paid to persons engaged in domestic service, $420 paid to miners and $445 paid to those engaged in the mechanical arts. He also submitted figures showing the per capita production of the agriculturists of the United States to be $117 in the South Atlantic States, $211 in the Southern Central States, $362 in the North Central States, $389 in the North Atlantic States and $519 in the Western States, the average production in manufactures being $850 per capita per annum. From these figures he deduced the conclusion that the condition of the farm laborer was wretchedly poor, while that of the farm owner was little, if any, better. He estimated that after all expenses were paid the farmer receives an average of only $22.61 per month, counting nothing for interest. For the past few years there has been a constant decline in the price of farm products, except in meat, dairy and poultry products. Referring to the probability of recommendations by the commission bearing upon the subject of trusts, he asked that the agricultural trusts be remembered. Among the farmers' organizations which he considered in the nature of trusts were the numerous fruit associations of California and other States and The Milk Producers' Association of Boston. There was also a tendency towards organization among the cotton growers, and if it ever took definite shape it would be the most gigantic trust in the country. Any law applying to trusts must bear upon these organizations, and there was no doubt, he said, they had been beneficial. He also referred to the numerous farmers' cooperative associations, of which, he said, there were 10,000 in the country. He thought they should be subject to State supervision for the protection of their members against dishonesty and incompetency. Mr. Holmes also suggested that the Southern States should take means to limit the percentage of liens on growing cotton crops. He considered the credit system in the South responsible for the overproduction of this staple article.

HALIFAX EXPORTS.

The value of the exports from Halifax, according to The Herald, for the year ending June last, was $940,020. For the year ending June 30, 1898, the value of the exports from Halifax was $997,589, a decrease this year of $57,569. The figures in detail are as follows :

	1899.	1898.
The mine	$19,733	$10,932
Fisheries (about $500,000 of which were lobsters)	667,224	678,736
The forest	98,611	122,717
Animals and other produce	14,283	24,153
Agricultural products	48,785	24,930
Manufactured articles	64,093	113,179
Miscellaneous articles	561	1,207
Total	$913,290	$975,854
Gold in bars	25,930	21,735
Coin, silver	800	.....
	$940,020	$997,589

IS AN IRON FAMINE LIKELY?

Discussing the problem of obtaining iron ore supplies for the present immense world's production of iron and steel, The Statist says : "The world's output of pig iron in 1898 is computed at 35,000,000 tons. That, on the usually accepted basis of two tons of ore to one ton of pigs, represents 70,000,000 tons of ironstone. Are the known resources of the producing countries equal to a continuous drain on that scale? But the output of pig iron this year—if America reaches her 14,000,000 tons, Great Britain makes up for the Welsh stoppage of last year and more, and Germany continues at present rate—will be, say, 38,000,000 tons, which represents 76,000,000 tons of ore. As a matter of fact, however, more than two tons of ore must be reckoned to one ton of pig iron, for, while we absorbed nearly 20,000,000 tons of ore last year, we only produced 8,631,151 tons of pig iron. Of course there were stocks of ore on hand, in transit and in process included in the reputed consumption and not represented in the returned output of pigs, but, with all allowance for that, the 2 and 1 measurement is not sufficient. For the anticipated make of pigs, then, at least 80,000,000 tons of ore will be needed. Where is it to come from? Last year the United States mines produced 23,000,000 tons; the Spanish mines 7,000,000 ; the German mines, say, 16,000,000 ; the British mines 14,000,000 tons—in all 60,000,000 tons. America, Great Britain and Germany alone consumed 56,000,000 tons last year, and this year will need at least 65,000,000 tons if the promised production is to be effected. The problem is to supply that quantity, and of quality adapted to existing plant. That there are undeveloped resources in Spain is not to be denied, but development takes time, and is a matter of cost, which, of course, becomes greater the further the deposits are from the seaboard. That our home supply can be materially increased is very doubtful—unless, at any rate, iron attains to a permanently higher level than at present. That the reserves of the United States are practically inexhaustible we are all accustomed to think, but the utilization of these reserves is all a question of price. Our own belief is that nowhere can the supplies of ore be so increased this year as to enable the estimated quantity of pig iron to be smelted. The future supplies can be increased, but will only be increased if the price of iron is maintained at a considerably higher level than in recent past years. In other words, we have entered upon an era of dearer iron."

Sale of Old Boilers and Scrap Iron.

SEALED TENDERS addressed to the undersigned, and endorsed "Tenders for old boilers and scrap iron," will be received at this office until Thursday, 20th inst., for the purchase of old boilers and scrap iron, now lying in the yards of the Public Buildings, Ottawa.

All necessary information may be obtained at this department on application to Mr. Wm. King, Mechanical Engineer. Tender to specify a bulk sum for the lot.

Boilers and scrap iron to be removed from Government property within ten days from acceptance of tender, and to be paid on delivery.

The Department does not bind itself to accept the lowest or any tender.

By order,
E. F. E. ROY,
Secretary.

Department of Public Works,
Ottawa, 11th July, 1899.

Newspapers inserting this advertisement without authority from the Department will not be paid for it. (28)

SEALED TENDERS addressed to the undersigned and endorsed "Tender for Supplying Coal for the Dominion Buildings," will be received at this office until Friday, 4th August, next, for the supply of Coal for the Buildings throughout the Dominion.

Specifications can be seen and forms of tender obtained at this office, where all necessary information can be had on application.

Persons tendering are notified that tenders will not be considered unless made on the printed form supplied, and signed with their actual signatures.

Each tender must be accompanied by an accepted bank cheque, made payable to the order of the Honorable the Minister of Public Works, equal to ten per cent. of amount of tender, which will be forfeited if the party decline to enter into a contract when called upon to do so, or if he fail to complete the work contracted for. If the tender be not accepted, the cheque will be returned.

The Department does not bind itself to accept the lowest or any tender.

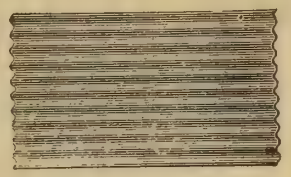
By order,
E. F. E. ROY,
Secretary.

Department of Public Works,
Ottawa, July 8th, 1899.

Newspapers inserting this advertisement without authority from the Department will not be paid for it. (30)

MANITOBA MARKETS

WINNIPEG, July 10, 1899.



BUSINESS is very good. All houses are making active preparations to entertain visitors during Fair week. Geo. D. Wood & Co. will celebrate the opening of the big Fair by flying for the first time a fine 24-foot Union Jack, with the name of the firm in white on the red. The poie is surmounted by a very large gilt ball. The price list for the week shows several changes. Sisal rope has advanced ½c. per lb. and manila 1c. There is also an advance in graniteware, bar iron and carriage bolts.

List corrected to date as below :

Barbed wire, 100 lb	$3 75
Plain twist	3 75
Staples	4 25
Oiled annealed wire, 10	3 16
" 11	3 22

USE OUR RELIABLE

Corrugated Iron

For ROOFING, SIDING, CEILINGS, ARCHES, Etc.

We can supply any gauge or size desired up to 120 x 33—in Galvanized or Painted—straight or curved.
Made from genuine Apollo Sheets—the best to be had.
Every sheet is accurately squared before corrugating, and the corrugations are pressed one at a time—not rolled—and **fit exactly**, both at ends and sides, without waste or cutting.
Make satisfaction a certainty by sending us your specifications—our catalogue gives full information, have you one ?

Less than barrel	77c.

BRITISH COLUMBIA COAL FOR THE NAVY.

ADMIRAL PALLISER'S RECOMMENDATION.

The recent trials of Crow's Nest Pass coal for naval purposes have been most satisfactory. Rear-Admiral H. Bury Palliser, Commander-in-Chief of the Pacific squadron, has sent the following letter to the company who supplied the coal for the trial from their mines at Fernie, British Columbia :

Imperieuse, at Sea, April 13, 1899

GENTLEMEN,—In answer to your letter of March 22, 1899, asking for an account of our trial of your Crow's Nest coal, we are happy to say it has been found most satisfactory—so much so that I have written to the Lords Commissioners of the Admiralty, recommending its use on the station, if a satisfactory arrangement can be made wi h your company.

H. BURY PALLISER, Rear-Admiral.

In addition, Admiral Palliser gave statistics of the test of the Crow's Nest coal, and compared it with other fuel used in the navy. He states that he found the coal in every respect superior to Pacific Coast or North of England coal, having less smoke, less ash, more durability, and greater evaporating power. The only coal he compares it with is best Welsh, and he declares that it is equal to this in most respects, only falling slightly below it in respect of smoke, and being 8 per cent. behind it in economy. At present, all the best steam coal used by the Pacific squadron is brought from South Wales, a distance of 20,000 miles by water round the Horn. Fernie can now supply the 40,000 tons per annum required for this service with a transportation of only 500 miles. In addition there is a large and increasing demand in Chinese waters.

BUSY NANAIMO.

Travelers from the local jobbing houses visiting Nanaimo just now say that business is brisk in the Coal City. Not a vacant house or business premises can be found, and houses are in constant demand. Joseph Morton, manager of The Manitoba Produce Company, who returned from a trip to Nanaimo recently, says : "Things are fairly booming in Nanaimo. The merchants are all busy and happy, and there is not an idle man in the whole place. In Nanaimo would be a good place for a man to strike who was looking for work. Business is as good as it was in 1890 and 1891, the years when Nanaimo had such a prosperous period. The present output of The New Vancouver Coal Company is over 50,000 tons per month, and the shipments of coal are right up to the amount produced."—Province, Vancouver.

HEATING AND PLUMBING

TORONTO BUILDING PERMITS.

BUILDING permits have been issued in Toronto to The Massey-Harris Co., Limited, for a one-storey brick moulding shop, on the south side of King street west, to cost $3,000; to The Eckardt Casket Co., for a two-storey boiler-house, to cost $2,000 ; to The Sanford Manufacturing Co., for alterations and additions to the store at the southwest corner of Adelaide and Yonge streets, to cost $2,000 ; to Mrs. T. M. Harris, for a two-storey and attic brick residence at 123 St. George street, to cost $13,000 ; to H. F. Squires, for a pair of semi-detached two storey and attic residences at 292 and 294 Robert street, to cost $3,000; to C. McCrimmon, for three attached two-storey and attic dwellings, rear of College street, on Concord avenue, to cost $4,500.

ZINC: ITS HISTORY AND USES.

This was the subject of a lecture recently delivered by D. W. Kemp before the Edinburgh and East of Scotland District of the National Registration of Plumbers. The ancient history of zinc, Mr. Kemp pointed out, was connected with its calamine ore, which, when smelted in a crucible with copper, made the alloy brass. The modern history of the metal was confined to the present century. The home of the industry was Belgium, where its manufacture had been carried to very great perfection. Although there was abundance of excellent ore in various parts of England, it was extraordinary that the manufacture of zinc should remain almost stationary in this country, in the face of a constantly increasing demand. The mines of Cumberland had actually been leased to The Vielle Montagne Zinc Co., the largest zinc manufacturers in the world, who employed about 300 miners at Nenthead, Cumberland. After raising the ore, it was then railed in its raw state to Newcastle. From that place, it was shipped to Antwerp, and thence it was sent by rail or canal to the works in the interior of Belgium. The ore was then manufactured into spelter, or sheet zinc, much of which came back to this country in various forms for plumbers and other consumers. The important question was thus raised as to what our technical colleges were doing. The metallurgy and use of zinc were then explained by 90 limelight views. A number of slides with statistics were exhibited, which showed that the production of spelter in the world was, in 1881, 260,000 tons in 1891, 356,000 tons, and in 1897, the latest returns, 436,000 tons, of which Great Britain produced, in 1881, 24,000 tons ; in 1891, 29,000 tons ; in 1897, 23,000 tons ; while the consumption of zinc in Great Britain in building construction, galvanizing, box-lining, telegraphy and telephones, and other uses had grown enormously. As an evidence of the esprit de corps in the zinc works of Belgium, it was stated that, although it was an extensive industry, employing many thousands of workpeople—the largest, The Vielle Montagne company, employing over 8,000 persons—strikes or trade disputes were unknown. This was due to the liberal management.

PLUMBING AND HEATING NOTES.

Catherine O'Brien, wife of Theodore Jacotel, has registered proprietress of Jacotel & Frere, plumbers, Montreal.

Partnership has been registered by Riopelle & Lafrance as plumbers in Montreal.

The machinery hall at the Toronto Exhibition Park is to be rebuilt at once. A frame or a brick building will probably be erected.

There is an agitation for waterworks in Windsor Mills, Que. Many new buildings are being erected in that town.

A. W. Peene has taken out a permit in Hamilton for a brick addition to the factory of The Meriden Britannia Company, to cost $2,000, and John Billings has received one for a three-storey brick store on James street, between King and King William streets, to cost $8,000.

The Montreal plumbers will hold their annual picnic about the middle of August. The exact date and place have not yet been decided upon.

WINNIPEG'S NEW C.P.R. DEPOT.

In an interview with The Winnipeg Free Press, Manager Wm. Whyte, of the C.P.R., stated that the erection of the railway's new depot and hotel and offices will probably be soon commenced.

Though the plans prepared by the architect, Maxwell, of Montreal, for the building have not been fully completed, the cost is estimated at about $500,000. The present station will be pulled down, and the material used in the new building. The station and hotel will present a solid block with handsome entrances on Main and Higgins streets. There will be a large shed for passenger trains with offices on each side, and the present tracks will be used entirely for freight traffic. The buildings are expected to be finished in about a year.

PLUMBING AND HEATING CONTRACTS.

Tenders are being asked for A. F. Gault's large departmental store on Milton street, Montreal.

Lessard & Harris, Montreal, have the contract for roofing and ventilating the new La Presse building, Montreal.

John Watson & Co., Montreal, have the contract for heating two houses for the estate of John Morrison, on Mansfield street, Montreal.

Tenders are in for plumbing and heating La Presse building, Montreal, but no announcement as to the successful tenderer has been made.

Alex. McKay & Co., Montreal, have the plumbing and heating of houses for the following: H. Trenholm and Wm. Bray, Westmount, and Mrs. Robinson, City Councillor street, Montreal.

J. A. Gordon, Montreal, has contracts for plumbing and heating the following buildings : Two stores and house, St. Catherine street ; two houses, Clandeboye street ; house and store, Prince Arthur street ; French Methodist school and parsonage, Delisle street, Montreal.

The Bennett & Wright Plumbing and Heating Co., Limited, Toronto, have the contracts for heating, wiring and plumbing in a large residence on St. George street, for Mrs. T. M. Harris ; for plumbing and heating in four residences on Roxborough avenue, Rosedale, and for alterations to plumbing and heating at the residence of J. T. Long, Wellesley and Jarvis streets.

TORONTO PLUMBERS' PICNIC.

The Toronto Journeymen Plumbers' Union hold their annual picnic at St. Catharines on Saturday. Most of the Toronto masters intend taking in the trip.

Preparations have been made for a big time throughout. An orchestra has been engaged to supply the music on the boat. A good programme of games, sports, etc., has been provided. One of the most interesting events will be a baseball match between the Toronto masters and the journeymen.

Roderick R. McKenzie has opened a general store in North Sydney, N.S.

SEND for specimen copy of Phillips' Monthly Machinery Register, containing over 5,000 entries of new and second-hand machinery of every description. The oldest established and most successful medium in the world. Established 25 years for the purpose of introducing those who have machinery for sale, to those who wish to buy, has a circulation of about 50,000 copies per annum, all over the world, and is used for continual reference by a large number of firms. It is consequently a most valuable advertising medium for all engineers and manufacturers. Subscription, 6s. per annum, price per copy, 6d. Sole Proprietor, CHAS. D. PHILLIPS, M.I.M.E., Newport, Mon., England. Telegraphic address: "Machinery, Newport, Mon."

NEW YORK TIRE CO. - - Toronto, Ont.

THE SOIL PIPE CONSOLIDATION.

It was stated at the office of Boring, Magoun & Co. last week that that firm had not yet positively decided whether it would finance The Central Foundry Company—the proposed consolidation of soil pipe manufacturers with $18,000,000 capital. It is understood, however, that the firm will take up the matter if the promoters submit a satisfactory basis. Of the proposed capital $4,000,000 is to be on 6 per cent. bonds. The $14,000,000 stock will be divided equally into 7 per cent. preferred and $7,000,000 common.

It is understood the promoters have options on the soil pipe plants of the following concerns: Ronalds & Johnson Co., Monitor Iron Works, Cassidy & Adler, J. L. Mott Iron Works, New York City; H. McShane Manufacturing Co., Baltimore; J. Regester & Sons, Baltimore; C. A. Blessing, Philadelphia; Phœnix Foundry & Manufacturing Co., Lansdale, Pa.; Midvale Foundry Co., Allentown, Pa.; Wilmington Foundry Co., Wilmington, Del.; A. L. Smith Iron Works, Bignall Manufacturing Co., Beach & Co., Medina, New York; Ahrens & Ott Manufacturing Co., Louisville, Ky.; Illinois Malleable Iron & Steel Co., Chicago; A. Y. McDonald & Morrison Co., Dubuque, Ia.; St. Charles Manufacturing Co., St. Charles, Ill.; Rundle & Spence Manufacturing Co., Milwaukee, Wis.; Hoffman, Billings & Weller Manufacturing Co., Milwaukee, Wis.; L. Wolf Manufacturing Co., Chicago, Ill.; Humphreys Manufacturing Co., Mansfield, O.; Bell Manufacturing Co., Vincennes, Ind.; H. C. Wheedon & Co., Anniston, Ala.; Alabama Pipe Works, Bessemer, Ala.; Hoffman, Billings & Weller Manufacturing Co., Gadsden, Ala.; Rush Manufacturing Co.—New York Journal of Commerce.

A NEW PIPE JOINT.

A mechanical achievement of some importance is being accomplished at Adelaide, West Australia, viz., the making of about nine miles of steel pipe, from 15 to 26 inches in diameter, after a new design of rivetless longitudinal joint. Each section is 26 feet long, with but four pieces, two locking bars and two plates. Each plate is cut with square ends after passing through a tram of leveling rollers, following which a planer with four cutters on a sliding table cuts the two longitudinal edges parallel, and 16 rollers, eight on a side, carried by the bending rolls, upset the edges in a dovetail of uniform width and depth. Thence, the plate goes through a hydraulic press, which upturns the edges, after which it passes through rolls that bend it into a half circle, two of these being placed in grooves, in locking bars, and temporarily clamped together. The pipe is next subjected to hydraulic pressure of 50 tons per inch on an expanding mandrel, the grooves closed and the usual asphalt coating applied. The pipe is jointed in the trenches with steel rings and lead.

MAKING A BRASS INSTRUMENT.

THE bell of a brass band instrument, which is the big end, extending back to the bow or first bend, is made, according to an exchange, of a single piece of metal which was originally flat. The pattern by which the metal is cut is of the shape that a bell would have if it were slit straight down the side from end to end and and then flattened out. When a flat piece of metal from which a bell is formed has been cut out by such a pattern, it is bent by hand over a rod until the edges meet. The seam is brazed, and the piece of metal now has its trumpet-shaped form, but with many little more or less uneven places in the thin metal. The bell is then placed upon a wooden mandrel, a form which fills the interior of the bell from end to end, and is of the size and shape to which the bell is to be conformed. The inequalities in the surface of the metal are then worked out of it by hand with wooden hammers, the bell being repeatedly driven down upon the mandrel. When the bell has at last been brought, in this manner, substantially to its true form, it is finished and brought to its perfect smoothness of surface in a spinning-machine.

The bow of the instrument is made sometimes in two pieces, sometimes in one. All of the very largest instruments have the bow in two pieces, which are cut from flat metal, like the bell piece. These flat pieces, whose outlines conform to the curves of the bow, are struck into the rounded form with dies, and the two halves thus made are then joined. Many instruments of all sizes are made with the bow thus formed, but the costlier instruments, of sizes other than the very largest, are made with bow of a single piece bent.

The bow has some taper, being larger at the end where the bell is joined to it than at the other. The bent bow in its original form, as cut by the patterns, is a straight, flat strip of brass, a little narrower at one end than at the other, in shape like that of the face of a long, slender keystone, so that when it is rounded up into tube shape it will have the required taper. This piece is brought into tube shape and brazed and wrought into form and finish, all except the bending of it into bow shape, in substantially the same manner as the bell. The slightly tapering, but yet perfectly wrought section of pipe is then filled with molten lead. When the lead has cooled the section of pipe thus filled is laid across a wooden form shaped like the lower part of the figure U, into which it is gradually bent. As the pipe is bent down more and more, little wrinkles appear across the inner side.

These wrinkles as they appear are driven out by hand with very small hammers, and when the bow has finally been brought down to its form the surface of the inner curve is as smooth as that of the outer curve. Then the lead is melted out of it and the bow is put through the process of finishing.

CLERGYMEN AND TRADING STAMPS.

In The Kingston Times of July 6 was printed the following over the signature of "Citizen":

"Unless the merchants take a firm stand against trading stamps and coupons, the evil will spread to such an extent that many merchants will be ruined and many clerks thrown out of employment. I don't understand why more ministers do not use their efforts to try and rid cities of such things, which are, in many cases, causing the merchants and people to commit fraud. In order to get the ten stamps held out as a bait to force people to continue, some actually keep four and five books, and send different members of the family to get the stamps, then put into one book. Then, again, the people are so crazed that, for a fact, people have been known to take stamps in preference to a discount of 20 per cent. on an article. What are merchants thinking of, allowing a third party to step in between them and their customers and reap the profits, which justly belong to them? In less than a year, $15,000 have been taken from whom and for whom—by coupons and trading stamps?

"How are we going to get rid of them? It all depends on the people and merchants. If you don't feed the animal, it will die. If the clergy would bring up such matters as these it would be better than worrying about the heathen Chinese. Looking for something for nothing is next thing to stealing. Let all take up the broom of right and sweep trading stamps and coupons out of Kingston, same as they did in Halifax, Arnprior, and many other places."

HALF HOLIDAY IN VANCOUVER.

The Wednesday half holiday has gone in Vancouver and the reasons are various. It would seem to be lack of unanimity principally. There was also apathy on the part of some, though in the main the merchants have expressed themselves as quite willing to observe the holiday. The stipulation always made was that everyone should observe it. The only benefit that has arisen from the whole movement has been the establishment of a pretty generally observed early closing practice, which is, perhaps, a good deal to have accomplished if only the merchants continue to observe it.—Province, Vancouver.

J. O. Bouchard, of Bouchard & Turcotte, general merchants, Magog, Que., is dead. A statement of affairs is being prepared.

CURRENT MARKET QUOTATIONS

July 14, 1899.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices throughout the civilized world.** Executive Offices: **Nos. 346 and 348 Broadway, New York City, U.S.A.**

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying, and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world. Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by respectable and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence Invited.**

Dominion Pattern Cow Tie AND Stall Fixture

The special features of the tie and stall fixture are well shown in the illustration. As will be noticed the chain is very short which prevents all danger of entanglement with the animal's foot. At the same time the form of the fixture is such that great freedom is allowed to the head. Because of the short chain this tie is much cheaper than the ordinary patterns.

The stall fixture is made from a tough quality of steel and is very strong. Also, owing to its circular cross-section, it is exceedingly rigid. Its simplicity, convenience, cheapness, and ease of attaching make it very popular with cow tie users.

This form of tie and stall fixture are sometimes called Niagara pattern.

American or Flat Link Chain,

for years the standard cow tie chain in "the States," is now rapidly coming in favor in Canada. Its short link, handsome appearance and smooth surface—which cannot injure the animal's neck—make it superior to all styles of chain for cow ties.

Established 1825 Important Decision relating to the Established 1825

HEINISCH

TRADE-NAME ON SHEARS, TRIMMERS, Etc.

The U.S. Circuit Court, Southern District of New York, Judge Townsend, has rendered a decision in the suit of "R. Heinisch's Sons Co. vs. Hermann Boker & Co."

"The Complainant is entitled to an accounting, and to an injunction restraining them from using the names 'Heinisch' or 'H. C. Heinisch' on its Shears, Labels, etc., and otherwise, in any way which will interfere with Complainant's enjoyment of the benefits of its Trade-name."

Referring to the above decision, we would respectfully state our determination to protect our rights in the premises and warn all persons against any imitation of our Trade-name.

WHEN WRITING ADVERTISERS PLEASE MENTION THAT YOU SAW THEIR ADVERTISEMENT IN THIS PAPER

THE GENERAL SITUATION STILL STRONG.

THE regular daily press despatches during the past week have had references to further advances in iron. These changes, considering the appreciation that has been in progress since the first of the year, are really remarkable.

Three weeks ago pig iron in New York was quoted at $20; to-day it is held at $20.50, while in Pittsburg No. 1 foundry iron has advanced in the interval $3 per ton, from $18.50 to $21.50, and billets $1.25 per ton from $32.75 to $34.

In the same period similar strength has been shown in Great Britain. On July 5 warrants were quoted at Glasgow at 69s. 5d. and at Middlesboro 68s. 6d. To-day they are 71s. 6d. and 72s. 1½d. respectively, an advance of from 2s. to 3s.

The comparison, therefore, between prices this year and those during the same period in 1898 is more marked than those which have been made previously in this column, as the following table will show:

British Prices—	1899. £ s. d.	1898. £ s. d.
Scotch Warrants	3 11 6	2 5 11
Middlesboro No. 3	3 12 11½	2 0 3
Lead, Soft Spanish	14 10 0	12 18 9
Spelter, G.M.B.	25 17 6	20 7 6
Straits Tin, Spot	131 12 6	71 1 3

Reference has been made before to the light existing stocks of tin and Canada plate in jobbers' hands at Montreal and other leading centres.

Nothing has transpired lately towards materially replenishing them. On the contrary, a number of firms, both in Montreal and the west, had good consignments of both lines on the ss. Merrimac, the vessel which went ashore in Anticosti last Saturday. It is a question whether there will be any salvage, and, in any event, if any of the cargo is saved, it will be delivered away behind time.

Deliveries, generally, are backward, even when such special causes as the above are wanting. Agents who have written complaining about this have been answered that makers in Britain are so rushed with orders that it is impossible to get work executed any faster. The makers also refuse to make firm offers for future deliveries either of tin or Canada plate, and such leading lines.

Altogether, the situation, generally, points still upwards despite the remarkable advances that have been recorded since January 1, last.

AFRAID OF CANADIAN HARDWOOD

THE National Hardwood Association of the United States, at a meeting held last week in Milwaukee, declared against reciprocity with Canada because of the lower tariff on lumber, which would be the resultant.

This is quite what might have been expected.

The hardwood forests in the northern part of the United States are gradually becoming exhausted, and it is predicted that those who now largely depend upon them will, ere many years, be compelled to draw upon the southern forests for their supplies.

In the meantime, however, the hardwood lumber men are reaping the advantage which this condition of affairs, accentuated by a keen demand, induces, for the prices they are getting to-day are $4 to $5 higher than a year ago, and the tendency is still upwards.

It is not surprising the National Hardwood Association is opposed to reciprocity.

N.B. LUMBER FOR ENGLAND.

The shipment of lumber from St. John, N.B. to Great Britain the past year, ending June 31, shows a large increase in all lines over the previous season, particularly in birch plank. The figures for the past year are: Spruce, 67,762,544 ft.; birch plank, 2,603,674 ft.; birch timber, 3,191 tons, and 131 tons of pine. Of this, W. M. Mackay shipped the larger quantity.

WIRE AND WIRE PRODUCTS 20c. HIGHER IN THE UNITED STATES.

WIRE and wire nails have again advanced in the United States. The change was made on Monday, and the advance is $4 per ton, or 20c. per 100 lb.

The price of wire nails to retailers is now $2.65 per keg f.o.b. Pittsburg in carload lots and $2.75 per keg for smaller quantities.

Barbed wire to retailers is $3.25 f.o.b. Pittsburg in carload lots and $3.35 for smaller quantities.

Smooth steel wire is $2.50 f.o.b. Pittsburg in carload lots to retailers, and $2.60 for smaller quantities.

Prices are almost certain to advance in Canada, in sympathy with the United States market, for, even before this last change, quotations in Canada were below the parity of those ruling across the line. It will be, perhaps, interesting to give a comparison of the f.o.b. prices ruling to-day at Pittsburg and factory points in Canada for wire nails in less than carload lots to retailers :

	Canadian Price.	Pittsburg Price.
Smooth wire, base....	$2 70	$2 70
Barbed wire.....	3 25	3 35
Wire nails.....	2 70—2 75	2 75

Barbed wire is, of course, free, but add the duty to the other lines and the Canadian manufacturers obviously have quite a margin to play upon. For example : The duty on a keg of wire nails is 60c. Add this to the price of wire nails in Pittsburg, $2.75, and we have $3.35 as the figure it would cost the Canadian retailer to import nails from across the border. This is 55 to 60c. more than he would have to pay for wire nails at home. Freight rates are not considered in either instance. But 60c. does not really represent the total difference, for the Canadian manufacturer allows a discount of 3 per cent. 30 days, while the terms in the United States are net cash 30 days.

The advances are not confined to wire and wire products. Foundry pig iron is 25 to 50c. per ton higher than a week ago, while some grades of pig iron have advanced as much as $2 per ton. Sheets are up $3 per ton, rails $1 per ton, billets and sheet bars 50c. to $1 per ton, and tinplates 50c. per box.

For a month that is usually characterized by a quiet trade and weak prices, July is doing remarkably well. And the indications as to the future favor, rather than otherwise, still higher prices.

LOWER DISCOUNT ON SCALES.

An advance of 10 per cent. is announced in the price of scales of Canadian make, due to the cost of raw material.

The manufacturers would have advanced their prices before this were it not for the fact that they were using up raw material which had been purchased prior to the appreciation in the market. Now that they are entering the market for raw material again they are compelled to mark up their prices to the trade.

The discount on standard scales is now 45 per cent. instead of 50 per cent., and on "Champion" 55 per cent. instead of 60 per cent.

A DIFFICULTY SETTLED.

The wage difficulty between The American Tinplate Trust and its employes has been settled, the former having conceded an advance of 15c. per cwt. in the base wages.

The men, it will be remembered, demanded an advance of 20 per cent, while the masters were only willing to accord 11 per cent.

A somewhat unique feature in the agreement under which the settlement is effected is a clause providing that in the case of an advance or decrease in the price of tinplates, the wages of the men are to vary accordingly. A selling price of $4.25 determined the minimum, and an advance of 2 per cent. of the base is made for each full 10c. advance above the $4.25.

Since the agreement was reached the price of tinplates has advanced 50c. per box, and this has added another 2 per cent. to the 15 per cent. advance which the workers have already been accorded.

IRON CASTINGS IN THE U.S.

A meeting of the jobbing founders of Philadelphia and vicinity was held in that city the other day, when a resolution was carried declaring that as the price of pig iron, scrap iron and other raw materials has risen so much in the last year, the price of iron castings should be raised ½ to 1c. per lb.

In answer to letters sent out by The Iron Trade Review replies were received from many of the large foundrymen in New York, Pennsylvania, Ohio, Michigan and New Jersey.

With the exception of a firm in Rochester, all those answering report advances of from ½ to 1¼c. for steel castings, and from ¼ to ½c. in iron castings. The majority of them also report that they are refusing to make long contracts, as further advances in pig iron will necessitate further advances in castings.

ADVANCE IN MATCHES.

An advance of 20c. per case on "Telegraph," and of 25c. per case on "Telephone" and "Tiger" matches is announced by The E. B. Eddy Co., Limited. The new prices are as follows :

	Per case.
"Telegraph."	
5-case lots and up	$3 20
Under 5 cases	3 40
"Telephone."	
5-case lots and up	3 05
Under 5 cases	3 25
"Tiger."	
5-case lots and up	2 90
Under 5 cases	3 10
"Telephone" (in ⅛ gross boxes)	
5-case lots and up	3 25
Under 5 cases	4 45

The cause of the advance is the sharp appreciation in the cost of raw material, which is not only likely to be maintained, but to increase. Consequently, matches are firm at the advance.

NETTING AND WOVEN WIRE DEARER.

Poultry netting and woven wire fencing have been advanced.

The best discount at which poultry netting can be bought at now is 40 per cent. off the list, while, for fencing, retailers will have to pay 7½c. per rod.

In announcing the advance, the manufacturers state that they are compelled to quote higher figures on account of the stocks of wire which they bought last year becoming exhausted.

The figures now quoted cannot be guaranteed, and only apply to orders of moderate size. Orders for large quantities will only be quoted to specifications on application, the unsettled state of the wire market preventing the manufacturers from making firm quotations.

SOIL PIPE COMBINE.

THE consolidation of soil pipe manufacturing plants, controlling 95 per cent. of the trade of the United States, has been completed. The new company will be known as The Central Foundry Co. Its securities will include an issue of $4,000,000 6 per cent. 20-year debenture bonds, redeemable after two years at 105 ; $7,000,000 7 per cent. cumulative preferred stock, and $7,000,000 common stock. Practically all the issues have been taken up by the firms interested.

The following firms are included in the new company : Ronalds & Johnson Co., Monitor Iron Works, Cassidy & Adler, J. L. Mott Iron Works, New York City ; H. McShane Manufacturing Co., J. Regester & Sons, Bartlett, Hayward & Co., and The Jones Hollowware Company, of Baltimore ; C. A. Blessing, Philadelphia ; Phoenix Foundry and Manufacturing Co., Lansdale, Pa.; Midvale Foundry Co., Allentown, Pa.; Wilmington Foundry Co., Wilmington., Del.; Bignall Manufacturing Co., Beach & Co., and The A. L. Sweet Iron Works, Medina, N. Y. ; Ahrens & Ott Manufacturing Co., Louisville, Ky. ; Illinois Malleable Iron and Steel Co., Chicago ; A. Y. McDonald & Morrison Co., Dubuque, Ia.; Rundle & Spence Manufacturing Co., Milwaukee, Wis.; S. L. Bignall Hardware Co., St. Charles, Ill.; Flush Tank Co., Aurora, Ill.; Kingsley Iron Co., Hammond, Ind.; Humphreys Manufacturing Co., Mansfield, O.; Bell Manufacturing Co., Vincennes, Ind.; Alabama Pipe Works, Bessemer, Ala.; Hoffman, Billings & Weller Manufacturing Co., Gadsden, Ala.; E. L. Tyler & Co., Anniston, Ala.; R. Esterbrook & Son, Boston, Mass.; North Dighton Furnace Co., Taunton, Mass.; C. M. Hart, Salem, N.J.; Foran & Abendroth Manufacturing Co., Flemington, N.J.; Shuster Foundry Co., South Pittsburg, Tenn.; Wilmington Pipe and Foundry Co., Wilmington, Del.

IT PAYS TO READ THE "ADS."

No part of a trade paper should be more closely read than the advertisements.

Every advertisement in display type is an article specially designed by one who has goods to sell for one who wants to buy.

The goods advertised may not always be what is wanted, or right in price, but this is an exception.

As a rule, he who advertises names in his advertisements lines that he deems will be most attractive in regard to price, pattern or character.

It pays to read the advertisements.

ADVANCE IN BLACK IRON PIPE.

Jobbers in Toronto have this week again advanced their prices on black iron pipe. HARDWARE AND METAL has, for the past two weeks, been expecting this advance, for the figures ruling have been lower than the market warranted.

The prices ruling, compared with those previously ruling, are as follows :

¼ to ⅛-inch	$ 3.35	$ 3.25
½-inch	3.40	3.35
¾ "	4.00	3.80
1 "	5.50	5.25
1¼ "	7.35	7.00
1½ "	9 25	8.75
2½ "	12.50	12.00

The price of pipe in the United States is firm and unchanged, but The National Tube Co. is gradually getting possession of the various mills throughout the country.

DEVELOPING THE EXPORT TRADE.

AT the recent convention of the National Association of Stove Manufacturers of the United States, a paper was read by W. J. Myers, entitled "Export Trade : How Can It Be Developed ?"

In starting the paper, the opening up of new colonies by the United States as a result of the war was commented on as being bound to result in large development in the export trade. The opening of the Philippines, said Mr. Myers, should also result in better trade relations with, and better exports to, the populous empires of the far East.

In other sections of the world the difficulties are many and hard to surmount. The lack of American banks gives to England an advantage in the matter of exchange, and also some part in the profit of the trade in some markets, the lack of subsidized steamship companies effecting lower freight rates ; the prejudice hard to overcome of the people living long under another Government ; the ignorance of some peoples ; their idle habits ; their lack of appreciation of art in stoves ; the nature of the climates ; the lack of intelligent representation of our goods ; the avarice of some commission merchants ; the cupidity of some Governments or representatives thereof ; oppressive Customs duties or Customs regulations ; the frailty of stoves to stand long voyages by sea or land ; the inability of foreigners to make plain their wants to supply broken parts ; the unbending attitude of carrying companies and their refusal to share any of the burdens of damage in transportation, and the great variety of patterns required to suit all the varying demands or likes of the numerous sections of the world beyond our shores.

It is especially difficult to cultivate trade in stoves in the warm climates, for, while people in such climates make, accept and use in increasing numbers, locomotives, railway cars, sewing machines, engines, pumps, typewriters, bicycles, firearms, agricultural implements, etc., they content themselves with an open fireplace, the brick oven or the aboriginal tripod in preference to the modern cooking stove.

The result is that the exports of stoves from the United States form about 32-100,000 of the whole of the export trade, which was about $1,200,000,000, or, in percentage, only 37-1,000 of 1 per cent. of the total exports from that country—namely, in the fiscal year ending June 30, 1898, $383,000, and, which strikes one as odd, just $1,000 more than the total exports of stove blacking.

Many schemes, such as sending catalogues or else promoters by one or a number of firms, have been tried, but the question is raised whether the results have paid for the expenditure necessary to obtain them.

The firm Mr. Myers represented enjoys some export trade, but what it cost them, he declared it would be impossible to tell. The trade they have is the result of money expended in circularizing and sending catalogues during 30 or 40 of the 65 years they have been in business.

At present the United States exports $128,000 worth of stoves to Great Britain, $36,500 to Africa, $17,000 to Asia, $34,000 to the Pacific Islands, a total of $215,000 to the Eastern Hemisphere. It also sends $92,000 to Canada, $11,500 to the West India Islands, $20,000 to Mexico, and $44,000 to Central and South America, a total of $167,500 for the Western Hemisphere, exclusive of the United States.

The export business can be further developed, Mr. Myers argued, by the association preparing a list of questions to send to all United States consuls asking what class of stove is used in the country they are in, whether stoves are imported from other countries, whether they are made there or not, and other such questions.

Replies to these questions should be sent by the association to all its members, who would thus be in a position to intelligently advertise their goods in the several countries represented by consuls.

THE STORY OF SMOKELESS POWDER.

IN the July number of Cassier's Magazine Mr. Hudson Maxim has a very interesting account of smokeless powder. Considering the part it plays in modern life, and its vital connection with industries in iron and steel, a condensed statement of the principal points may not be out of place in our columns.

In 1832, Braconnet, Nancy, France, found that starch and similar substances were rendered highly combustible by treatment with nitric acid. Pelouze, in 1838, pointed out that cotton paper and other vegetable substances, on treatment with nitric acid, also yielded highly combustible bodies, and Dumas, a little later, produced what he termed nitramide, made by acting upon cardboard, etc., with nitric acid. But it was not until 1846 that these hints were worked out practically by Schoenbein in true gun cotton. He was

THE FIRST TO USE A MIXTURE

of sulphuric and nitric acids, partly for the purpose of using a more concentrated bath and partly to absorb the water set free in the nitration of the cellulose. But here again is found a striking illustration of the fact that two independent investigators may come upon the same discovery about the same time, for it was in 1846 also that Boettger came upon practically the same results as Schoenbein, and they united forces for the exploitation of the new explosive. In 1847, Sobrero used glycerine instead of cotton, starch, etc., and confirmed the use of it in Pelouze's laboratory. Collodion cotton in etheread and alcoholic solution was introduced by Dr. Maynard, Boston, into surgery about this time. Between 1846 and 1852 Von Lenk improved the method of Shoenbein and Boettger, and the Austrian Government built a gun cotton factory in 1853 under Von Lenk's charge. Here again there was almost simultaneous discovery of important fact by independent observers, for, while Von Lenk was experimenting in Austria, Mr. Abel, now Sir Frederick Abel, in England, was working in the same direction, and it is to him that we are chiefly indebted for the modern high explosive.

Mr. Abel secured a United States patent in 1866 for a method of making solid masses of a mixture, in a fibrous pulped state, of soluble and insoluble gun cottons, by dissolving it in soluble gun cotton. Grains of sufficient density and hardness could be made in this way, and Mr. Maxim says that this method could be used to-day for

MAKING GOOD SMOKELESS POWDER.

The next most important step was taken by Alfred Nobel in 1875, when he proposed to gelatinize nitro-glycerine with pyroxylin, with or without other solvents or the use of heat. Mention must also be made of the semi-smokeless powder of Col. Schultz, of Austria, who, in 1860, used a form of nitrated cellulose impregnated with nitrate of potash or nitrate of barium ; of Dittmar, 1860, who made about the same thing, and of Prentice & Sons, 1866, who made a sporting powder from a pulped mixture of gun cotton and unnitrated cotton, and who, later, made a granular smokeless powder of pellets of compressed gun cotton, waterproofed by india rubber varnish. The work of Alexander Parkes, Birmingham ; of Daniel Spill, London ; of J. A. MacLellan and John W. Hyatt, in the United States, and of Dr. Robert C. Schuepphaus must also be mentioned, especially that of Daniel Spill, who, in 1869,

DISCOVERED THAT A COMPOUND

could be made from soluble pyroxylin and camphor, that was plastic at 75 deg. C., and that camphor was a solvent for certain varieties of gun cotton. Spill was the father of the celluloid industry.

Mr. Hudson Maxim himself has done a great deal of work on smokeless powders, being the first to introduce them to the United States Government and the first to make smokeless powder in America. He associated Dr. Schuepphaus with himself, and the Maxim-Schuepphaus smokeless powder has been adopted by this Government and is the service powder in both the navy and the army. It is manufactured by Messrs. E. I. Dupont de Nemours & Co., Wilmington, Delaware, who purchased the United States patents. The Maxim-Schuepphaus powder is multiperforated so as to make it progressive in its combustion and increase the burning surface just before its complete consumption. It is made of tri-nitro-cellulose, with a small admixture of gelatine pyroxylin, which serves the purpose of preventing shrinking, warping and cracking. The process was patented in 1894. Mr. Maxim's article is illustrated with some very striking photographs showing him lighting his cigar with burning cordite, burning a stick of dynamite and other high explosives, and igniting smokeless cannon powder under water.

A FOUR-STOREY ADDITION.

The Sherwin-Williams Co. will shortly begin work on a large four-storey addition to their Cleveland plant. It will be used to relieve the overcrowded condition of other buildings and to accommodate the increasing demands made on the factory by a steadily growing business. The new building will be of brick, iron and steel construction, and contain many novel improvements.

RECORD IRON PRODUCTION.

THE IRON AGE, in its monthly summary of the pig iron production, says : One by one the new and old furnaces which have been getting ready are falling into line as producers, but there is still a considerable number struggling to resume. This month has already witnessed the starting of some and others are nearly ready. As an offset some furnaces, long active, are forced out for repairs, and temporarily, at least, an important group in the Shenango Valley is idle on account of labor troubles. Generally speaking, the summer is having its usual effect in reducing the tonnage produced.

The stocks show a further sharp decline —an ample proof that output is not yet up to consumption.

The weekly capacity of the furnaces in blast on July 1 compares as follows with that of preceding periods :

	Furnaces in Blast.	Capacity Per Week. Gross tons.
July 1, 1899	237	263,363
June 1	220	254,062
May 1	217	250,095
April 1	205	245,746
March 1,	192	228,195
February 1	195	237,639
January 1	200	243,516
December 1, 1898.	195	235,528
November 1	196	228,935
October 1	192	215,635
September 1	186	213,143
August 1	187	206,777
July 1	185	216,311
June 1	190	225,398
May 1	194	234,163
April 1,	194	233,339
March 1	193	234,430
February 1,	184	228,338
January 1	188	226 608
December 1, 1897.	191	226,024
November 1	183	213,159
October 1	171	200,128
September 1	161	185,506
August 1	152	165,378
July 1	145	164,064
June 1	146	168,380
May 1	146	170,528
April 1	153	173,279
March 1	156	169,986

The position of furnace stocks, sold and unsold, as reported to us, was as follows on July 1, the same furnaces being represented as in former months. This does not include the holdings of the steel works producing their own iron :

Stocks—	Feb. 1.	May 1.	June 1.	July 1.
Anthracite & coke	365,311	205,125	167,587	144,788
Charcoal	97,593	79,002	65,648	51,547
Totals	462,904	284,127	233,235	169,335

BUSINESS CHANGES.

DIFFICULTIES, ASSIGNMENTS, COMPROMISES.

TOUSSAINT CREVIER, founder, etc., Montreal, has assigned, and a meeting of his creditors has been called for July 28.

U. F. Drouin, hardware dealer, Quebec, has assigned.

Chas. Simpkins, general merchant, Bothwell, Ont., has assigned.

J. G. Stevens, general merchant, Toledo, Ont., has assigned to J. H. S. Mackay, Westport, Ont.

PARTNERSHIPS FORMED AND DISSOLVED.

Sarrassin & Desjardins, plasterers, Montreal, have dissolved.

Dockrill & Sayer, founders, etc., Montreal, have dissolved.

Fish & McNeil, general merchants, Ayer's Flats, Que., have dissolved.

Alex. Barrie & Co., manufacturers of insulated wire, Montreal, have dissolved.

Leonard Frank, general merchant, Alberni, B.C., has admitted Bernard Frank under the style of Frank Bros.

Wadsworth & McWhinnie, roofers, etc., Ottawa, have dissolved, and Wadsworth & Sheppard have started in business.

James Campbell and Wm. H. Kerr have registered partnership as blacksmiths under the style of Campbell & Kerr, Eaton, Ont.

Gould & Stratford, plasterers, London, Ont., have dissolved. Henry & Galipeau, manufacturers of threshing machines, Huntingdon, Que., have dissolved.

John Millen & Son, hardware and paint dealers, Montreal, have dissolved, and John E. Millen and Edwin D. Millen have registered partnership under the style of John Millen & Son.

SALES MADE AND PENDING.

The assets of Geo. S. Johnston & Co., general merchants, Ottawa, have been sold.

A. M. Doering, general merchant, Waterloo, Ont., is advertising his business for sale.

CHANGES.

W. George McLean, blacksmith, Harvey, Ont., is offering his business for sale.

P. L. Grassie, general merchant, Olds, N.W.T., has sold out to Code & Struthers.

Arthur Guilbert, general merchant, Bruxeles, Man., has removed to Letellier, Man.

F. M. Lavoie has ceased doing business under the style of The Pallascio Hardware Co., Montreal.

Hermiston & Nichols have succeeded W. H. Wiles as stove and tinware dealers in Walkerton, Ont.

A. Laycock, general merchant, Fox Warren, Man., has been succeeded by McCrindle & Co.

J. R. Jacobs & Co. are applying for incorporation as general merchants, in Greenwood, B.C.

HOW YOU RISE

is a matter of supreme importance, for on **HOW** you rise depends the height you reach and the length of time you stay up.

Attempt to rise by selling cheap paints—paints low in price and of necessity correpondingly low in quality—and you won't get up very high, neither will you stay very long even at that low level. But put an equal amount of energy into the sale of good paint—the best paint—and you can rise to any height you choose and stay up as long as you want to.

Agents for

THE SHERWIN-WILLIAMS PAINTS

get up high and keep going higher. They steadily increase the volume of their business. We give them the best paint to sell and the best methods for pushing it. S.W.P. and its advertising are success-makers. They provide the best means of rising that a merchant can have.

Write us if you are interested.

DEATHS.

D. G. Welsh, blacksmith, Malton, Ont., is dead.

FROM ITALY TO B.C.

What is known to be the first direct shipment of merchandise in any quantity from Italy to the British Columbia market has been received by Morris & Aitkin, wholesale commission merchants of this city. The shipment which was several tons, was comprised of boracic acid, brimstone, citron peel, olive oil and Italian castile soap. As the goods were shipped direct from Livorno (Leghorn), which is the principal mercantile centre of the department of Lucca, the importation of oil bears that well-known name which is standard of excellence in olive oils. The merchandise came via Gibraltar and Liverpool.

This shipment, which is intended to be but the initial order of a continuous trade, is noteworthy as it marks an era in the development of trade in this Province. When our merchants are dealing direct with the source of supplies it shows enterprise and a disposition to do the best possible for the home trade, which deserves encouragement, as it cannot fail to establish Vancouver as a trade centre, a position she is rapidly attaining.-The Province, Vancouver, July 13.

EMPLOYES SHARE THE PROFITS.

The present era of prosperity has been manifested to the employes of The Ham & Nott Manufacturing Co., Limited, manufacturers of refrigerators, etc., Brantford, Ont., in a way eminently satisfactory to them.

This company has just closed a successful year. One day this week the forty or more employes of the firm were notified that it had been decided to share the profits of the past year with the men as follows: Those employed a year or more, married men, $25; single men, $15; boys $5. Those employed less than a year, married men, $5; single men, $3; boys $2.

To show their appreciation of this kindness the employes of the firm presented J. T. Ham, the president of the company, who was about to visit Muskoka, with a gun, accompanied by an address expressing their best wishes that he might enjoy his trip.

The Ham & Nott Co. now occupy a building 140 x 60 feet, but intend to double their capacity by the erection of two more buildings in the near future.

CANADIAN - BRITISH TRADE PROSPECTS.

MR. J. M. McKIM, of London, England, manager of the branch office of HARDWARE AND METAL in Great Britain, is visiting his relatives and friends in Canada. Mr. McKim was for some years a member of the business staff of the Toronto office, and was promoted to the management of the British branch nearly two years ago. His father was the late Robert McKim, who, as a member of the famous Light Brigade, saw service in the Crimean War, and fought in the engagements of Alma, Balaclava, Inkerman and Sebastopol.

"What are the prospects," I asked Mr. McKim, "from what you can gather in your conversation with British manufacturers and merchants for the expansion of trade between Great Britain and Canada?"

"Prospects are certainly improving. But, you know, there are a great many business men in London who do not seem concerned at all about trade outside the British Islands. I am sure, however, that there is a better feeling in regard to trade with Canada. As you know yourself, from your own observation, there are a great many more British manufacturers and merchants, or their representatives, than there used to be coming to Canada looking for business."

"Do you hear many complaints in regard to the absense of a national insolvency law in Canada?"

"I do. Some business men have told me that not until Canada has set her house in order in this particular will they make any effort to do business with her. They cannot, they tell me, understand why a nation should extend preferential tariff treatment to Great Britain, as Canada has done, and then, by refusing to enact an insolvency law, nullify to a great extent the advantages which the tariff accords. Some, on the other hand, pretend that the preferential tariff does not give British goods a preference. I was very sorry," concluded Mr. McKim, "to see the Insolvency Bill side-tracked again. I believe that a national insolvency law would do as much, if not more, for Canada in Great Britain than even the preferential tariff."

HARDWARE AND METAL is now well known in Great Britain, and the London, England, office at 109 Fleet street, E.C., is frequently visited by British manufacturers and merchants seeking information about Canada.

A FINE VIEW OF ST. JOHN, N.B.

Emerson & Fish, manufacturers, importers and wholesale dealers in hardware, tinware, etc., St. John, N.B., have always taken a foremost part in the movement towards making St. John one of Canada's winter ports and a centre of tourist travel in the summer time. The latest evidence of their enterprising interest in their city is a hanger containing a beautifully-printed half-tone engraving of the city and port of St. John. The engraving is nearly two feet wide and six inches deep. In the background is the city, its many fine buildings near the water-front showing to excellent advantage. In the foreground, a dozen large ocean steamers are shown in the fine harbor, which is the pride of the citizens of St. John. The picture is a good one, fully worthy of the subject it deals with.

TRADE CHAT.

FRANCOIS LANNOY, a representative of Belgian capitalists, has been visiting Chatham and Goderich, Ont., in the interests of a glass factory.

The Croft Acetylene Gas Co., Limited, Toronto, has been incorporated.

The Eastern Townships Electric Co., of North Hatley, Que., has been incorporated.

The Caster and Metal Stamping Co., of Woodstock, Ont., Limited, has received its charter.

The McLachlan Electric and Gasoline Motor Co., Limited, of Toronto, has been incorporated.

W. H. Sills, a Chicago mica manufacturer, has bought a mica mine in the Gatineau district for $15,000.

The Aikenhead Hardware Co., Toronto, have the contract for hardware for the Kingston penitentiary. R. Crawford, of Kingston, will supply the coal.

The Diamond Machine and Screw Co., of Toronts, Limited, has been incorporated with a capital of $75,000. The following are the provisional directors : R. N. Sterling, F. S. Jackson, J. W. Bull and R. F. Massie. The company acquires the business of The Diamond Machine and Tool Co.

A carload of machinery arrived in Barrie, Ont., last week for the peat works there. The boiler and engine have been set up in Butterfield's old foundry, and the rest of the machinery will be placed in position at once. It is expected manufacturing operations will commence about August 1.

An early-closing by-law has just come into effect in Prescott, Ont., compelling the dry goods, boots and shoes, millinery, tinsmith, tailor shops, etc., to close at 6 o'clock and the grocery stores at 7. The clerks of the town have formed a Clerks' Protective Association to see that the by-law is enforced.

HAMILTON STOVE FOUNDRY BURNED.

The large stove foundry and scale and malleable iron works of The Burrows, Stewart & Milne Co., Hamilton, were partly destroyed by fire on Friday evening of last week. The damage is estimated at between $40,000 and $50,000. The insurance on stock and plant is $95,000. Over 250 hands are thrown out of work, and an immense stock of stoves and furnaces for fall trade have been destroyed.

This is the third large fire this company has had in 20 years.

MACHINERY AT WINNIPEG FAIR.

Never in the whole history of exhibitions in Winnipeg has there been such a display of farm implements, threshing engines, carriages and wagons. The machinery hall has been twice enlarged, but it was not adequate to the number of articles to be shown and all the threshers and stationary engines were exhibited in tents. The display of traction engines was wonderful. All the large implement houses were represented and all the machinery was in motion. The Massey-Harris Co. had a model farm, with the figures and animals moving by electricity. This proved one of the most popular corners of the fair.

HANDY HARDWARE ADJUNCTS.

Thomas Houlding, of Rapid City, Man., has the best nail cabinet of any I have ever seen. It is about three feet from the floor and 16 feet long ; 12 inches wide. This is divided into stalls for the various kinds and sizes of nails. The bottom has a slope of about five deg. so that the nails will fall to the front, and can be got out in short order. This is much cleaner than getting down under the counter or the nail keg. Then there is no danger of mixing or waste.

Another thing is noticed in Mr. Houlding's store is the way he has of displaying his cutlery. He has a frame made of quarter-round moulding with a net wire back, covered in front with green cloth. Knives and forks of all descriptions are fastened to this by means of narrow elastic bands, drawn through the cloth and wire. In selling goods of this kind it is much handier than having to open boxes for each description. The price and number being on each article, it is no trouble to find the rest of the same kind.

THE UPWARD TREND OF PRICES.

Bradstreet's index figures show the low water mark in prices to have been 56.803, October 1, 1896. On July 1, 1897, they were 66.937, but between these dates they had been over 68 ; they reached 76.556 on August 1, 1898, 77.819 on January 1, 1899 and 80.818 on July 1. This is almost exactly the same as on July 1, 1892, 80.629; but on July 1, 1891, the figures were, 91.633, and on October 1, 1890, 105.996. The most rapid part or the fall, however, occurred in the next two months ; the figures for January 1, 1891, were 94.236. During June 36 articles on the list of Bradstreet's advanced, 14 declined and 55 remained unchanged. In 12 months 63 advanced, 26 declined and 14 remained without change.

CANADA PAINT CO.'S PICNIC.

The seventh annual picnic and games of The Canada Paint Co., Limited, is being held to-day (Saturday) at Otterburn Park, St. Hilaire. Judging from the games and dance programmes an enjoyable time will be spent.

SULPHITE FIBRE WANTED.

A heavy demand is being experienced for sulphite fibre, and those who have any to sell will likely find buyers by addressing The E. B. Eddy Co., Limited, Hull, Que.

TRADE IN OTHER COUNTRIES THAN OUR OWN.

A PRESS despatch from Reading, Pa., under date of July 16, says: "For the first time since the present boom began pig iron reached $20 a ton in the Schuylkill Valley yesterday. During the past few days the price was $19.50, and to-day $20 was offered, but the supply is so limited that few orders can be filled for immediate delivery."

ADVANCE IN TURPENTINE.

A fair demand has recently developed for spirits turpentine, and the local supplies have been exhausted, causing a sharp advance in prices. Business was done yesterday at 45c. a gallon for spirits in machine-made barrels, which, compared with 40c., the price current on Wednesday last, shows a gain of 5c. a gallon. The upward movement was stimulated by the lack of offerings for shipment from Savannah. Factors there, however, are making deliveries on their July contracts and therefore have little surplus to offer on the market. The receipts at the primary markets have rather light of late compared with last season, and predictions are freely made that the current crop will be from 12 to 15 per cent. short. The local situation, however, will, it is expected, be relieved in a day or two, as two steamers from Savannah and Wilmington are due here with 1,200 to 1,300 barrels of spirits turpentine on board.—New York Journal of Commerce, July 13.

ADVANCE IN U.S. TINPLATES.

The American Tinplate Co. advanced prices 50c. per box and now quote the basis of $4.37½ f.o.b. mill for 100 lb., 14 x 20 cokes, and 10c. extra for squares, shipments the balance of the year. The price for delivery at New York was $4.57 less 1 per cent. Ternes were put on the basis of $4.42½ at mill for ordinary 100 lb. An advance was not unexpected, but the one made was double what had been looked for and caused a sharp revision in dealers' quotations. There was, however, no perceptible increase in business or in the demand and deliveries by the company are still more or less backward. Foreign plates have undergone a further advance abroad, and import cost here is now so high that American plates may be raised another 50c. without inviting serious immediate competition from abroad.—N.Y. Journal of Commerce.

NEW YORK METAL MARKET.

COPPER—The market was without new feature. All varieties of the metal were held firmly at prices that have prevailed for about ten days past, and without sign of being affected in the least by any of the statistical exhibits that have occupied news space of late. The mining companies' representatives make no claim of booking large orders recently, but they do reaffirm previous reports of being sold considerably ahead on their production and very busy with new deliveries. In other quarters no facts appear that cast any shadow of doubt around those statements. To the contrary indications were not wanting of considerable quiet looking around for copper at prices slightly under the market and of extremely slender results from the same. Sellers stand firmly, to all accounts, at 18½c. for Lake Superior ingot, 17½ to 17¾c. for electrolytic bars, etc., and 17¼ to 17c½. for casting stock. As a rule, sellers ask the outside figures quoted for the last two-named varieties.

PIG TIN—London opened at about 17s. 6d. advance on Tuesday's prices. From that point there was a slight reaction only, without, however, any signs of change in the position. Here values remained very uncertain, with open quotations and actual trading basis as much as ½c. apart at intervals. Operations are still being conducted very cautiously, since there is no purely local speculative movement and seemingly general aversion to buying, except as imperative wants necessitate. As a rule, sellers kept their asking figures nearly in line with London quotations in the afternoon at about the basis of 29 to 29⅛c. for five-ton lots and ⅛ to ¼c. more for single tons. Bids over 28⅝ to 28¾c. for round lots were the exception.

PIG LEAD—There was little, if any, change from the somewhat peculiar conditions that have characterized the market for some little time past. Large consumers could buy at relatively lower prices here than at any other point, or at about 4.55c., although 4.60 to 4.65c. was quoted on small lots, and generally to other buyers. The last-named figures were quoted also for round lots, delivered at Philadelphia or Boston, although St. Louis quotations were as high as 4.57½ to 4.60c. f.o.b. there. Business in this market was only fair and not as extensive as might be expected in view of prevailing condition.

SPELTER—Dealings are running light in this quarter, and inquiries are chiefly for single carloads or smaller quantities. The market remains firm, however, as supplies here continue light and the cost comparatively high in primary markets. About 6¼c. for spot stock and 6c. for near arrivals and 6c. were quoted.

TINPLATE—There was more business and a decidedly strong tone to the market. Makers seem unable to fill orders requiring guaranteed delivery this month or next, and dealers are securing 10 to 15c. advance on list prices for what they may have to spare. Orders are being placed for delivery the last quarter of the year at The American Tinplate Co.'s prices to very good amount.

IRON AND STEEL—There is no sign of reaction in the pig iron market. Orders are not very numerous this quarter at present, nor do inquiries extend to really large quantities, but the new business and the deliveries on old contracts combine to keep stocks down to a point that enables furnacemen to hold prices very firmly. In some quarters about 25 to 50c. over current quotations is asked.

Everything in the line of old material is very firmly held, and it is no exception that 50 to 75c. advance on the prices at which sales were made last week is firmly insisted upon by holders.

In all manufactured goods departments the position continues strong, and considerable business is held in abeyance by inability of manufacturers to guarantee the deliveries asked. High prices, however, have a restraining influence in some directions.—N.Y. Journal of Commerce, July 21.

PERSONAL MENTION.

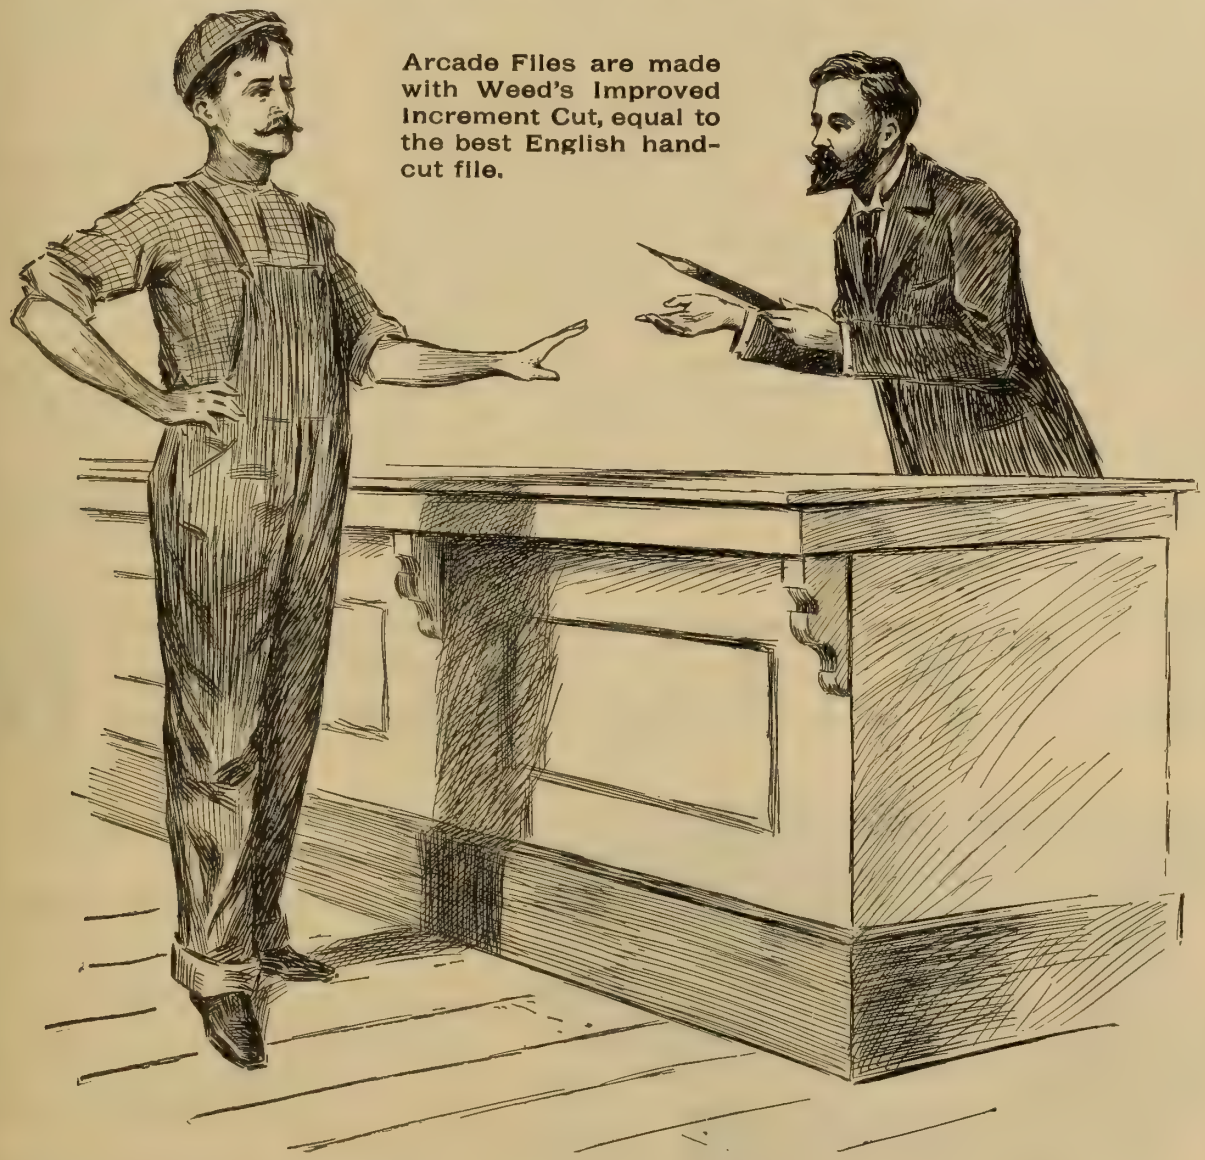
Mr. A. C. Leslie, of A. C. Leslie & Co., Montreal, was in Toronto on Friday.

Mr. Walter H. Cottingham, Cleveland, general manager of The Sherwin-Williams Paint Co., sails on the ss. Umbria to-day for a business trip to England. He will make his stay there as short as possible, and expects to be back about five weeks after sailing.

Mr. A. T. Chambers, who for the past few years has been representing the Thomas Davidson Manufacturing Co., Limited, in Western Ontario, has joined the traveling staff of H. S. Howland, Sons & Co., Toronto, and will represent that firm from Port Arthur west.

Mr. Chambers, prior to his experience as traveler for the Thomas Davidson Manufacturing Co., was in the retail hardware business for several years, and while traveling with tinware samples he has not forgotten to keep in touch with the hardware trade.

THE GRANGE SUPPLY CO.'S STOCK.



The stock of The Grange Wholesale Supply Co., 126 King street east, Toronto, was sold en bloc on Wednesday afternoon. The total value of the stock was $15,088.56. This included $4,026.07 boots and shoes; $3,305.05 groceries; $2,646.34 staple dry goods; $1,473.59 hardware, and stationery, jewelery, harness, patent medicines, etc., in smaller amounts. The purchaser was R. Y. Manning, manager of The People's Wholesale Supply Co., 144 King street east, who paid 56c. on the dollar.

MARKETS AND MARKET NOTES.

QUEBEC MARKETS.

MONTREAL July 21, 1899.

HARDWARE.

THE firm tendency of general hardware values is quite as marked this week as last, though there are no actual changes to report, as was the case last week. Trade in wire is fair, especially for hay-baling, other sorts ruling rather quiet. Wire and cut nails display good seasonable activity, and more inquiry has been experienced for horse nails. Horseshoes are firm at the rise, and a good trade is experienced in screws, bolts and rivets. Cordage is quiet, but in green wire cloth, wringers and such seasonable lines the movement is considerable. Sporting goods, such as guns and ammunition, are also commencing to exhibit more life, while cement, firebricks and such building material are not neglected, although they cannot be called active.

BARBED WIRE—There is little doing in barbed wire, but prices are firm at $3 f.o.b. here.

SMOOTH STEEL WIRE—There is a fair inquiry for hay-baling wire, but other sorts are quiet. Values are firm at the rise—$2.70 for Nos. 6 to 9.

FINE STEEL WIRE—Demand has been moderate at the rise, and discounts are firm at 20 per cent.

GALVANIZED WIRE — A quiet trade is noted in this line of material, and prices are steady on the basis of $3 for No. 9.

BRASS AND COPPER WIRE — There is a fair trade in a small way. Discounts are 50 and 2½ per cent. on brass, and 45 and 10 per cent. on copper.

FENCE STAPLES — In fair request and steady. We quote: $3.05 for bright and $3.65 for galvanized per keg of 100 lb.

FINE STAPLES — Quiet, as last noted. Discounts are: Cooper, 55; poultry netting, 45, and electrician, broom, bed, etc., 40 per cent. off.

WIRE NAILS—Business in wire nails has been fairly active since last week's advance. We quote $2.70 base.

CUT NAILS—Demand for these continues of good proportions, and values are firm at the rise last noted, $2.25 f.o.b. Montreal, etc.

HORSE NAILS—More inquiry has been experienced for these, both for forward and prompt shipment. Discounts are 50 per cent. on standard and 50 and 20 on Acadia.

HORSESHOES—Trade has not exhibited any alteration as a consequence of last week's rise. We quote as follows: Iron shoes, light and medium pattern, No. 2 and larger $3.50; No. 1 and smaller, $3.75; snow shoes, No. 2 and larger, $3.75; No. 1 and smaller, $4; X L steel shoes, new light pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; featherweight, all sizes, Nos. 0 to 4, $5.15; and toe weight steel shoes, all forward, all sizes $6.25 f.o.b. Montreal, St. John, N.B., and Halifax, N.S. Delivered f.o.b. in Toronto, Hamilton, London and Guelph 10c. per 100 lb. extra.

SCREWS — A good trade continues in screws. Discounts are: Flat head, bright, 82½ and 5 per cent; round head do., 75 and 5; flat head, brass, 75 and 5; round head do., 67½ and 5.

BOLTS—Demand is well maintained for bolts. Discounts are: Carriage bolts,

Lac a lac Tortue. Grand Piles.

Geo. E. Drummond,

Managing-Director and Treasurer

5-16 and smaller, 55 per cent.; ⅜ and up, 50 per cent.; full square bolts, 65 per cent.; machine bolts, 55 per cent.; coach screw bolts, 67½ per cent., and sleighshoe bolts, 72½ per cent.

NUTS AND WASHERS — As last noted. We quote: Square, 3¾c. and hexagon 4¼c. per lb.; discount off list. Washers in 50-lb. boxes are 50 per cent. discount.

RIVETS—There is a fairly good trade in these. Discounts now are: Black and tinned, 45 per cent.; ditto burrs, 40 per cent.; copper rivets and burrs, 35 per cent.

CORDAGE — Trade is not active, but values are held quite firm. We quote as follows: Manila, 7-16 and up, 12c.; ⅜, 12½c., and ¼ and 5-16, 13c. Sisal, 10¾c. for 7-16 and up; 11¼c. for ⅜, and 11¾c. for ¼ and 5-16. Binder twine: Pure manila, 10½c.; 550 feet, 10c.; sisal, 500 feet, 9½c.

WRINGERS—Trade is fair at a range of $48 to $60, according to brand, with a discount of 45 per cent.

BUILDING PAPER—Business in building paper is quiet and values are steady.

GREEN WIRE CLOTH—Stocks of this continue quite light, and every jobber here complains of delayed deliveries. Prices are firm.

SPADES AND SHOVELS—Discounts remain unaltered, but the market is very firm in tone.

HARVEST TOOLS—The advance in these has already been referred to, while trade is active for assortments.

SPORTING GOODS—These are now moving out well for the season of the year.

CEMENT—This line is quiet, but very firm in its tone. We quote as follows: Belgian, $1.90 to $2.10; English $2.30 to $2.40, and German, $2.45 to $2.65, per cask ex wharf.

FIREBRICKS—Demand fair and values firm at $12 to $23 per 1,000, as to brand.

METALS.

The strong disposition of all iron and metals continues marked, though there are no further quotable changes this week.

PIG IRON—Buyers who have tried to close contracts for leading brands of Scotch iron within the week found it impossible to do so. No Hamilton pig is obtainable under $22.

BAR IRON—The advance has led to more inquiry for forward shipment, and $2 is now the general asking price for ordinary jobbing quantities.

BLACK SHEETS—There is a fairly active trade in these. We quote: 8 and 16, $2.35; 18 and 20, $2.05; 22 and 24, $2.25; 26, $2.35, and 28, $2.40.

HOOP IRON—Without change, at $2.45.

STEEL — Firmly held. We quote: Sleighshoe and tire, $2.50; spring, $2.70; machinery, $3, and toe calk, $3.

Manufacturers of

Ferrona Pig Iron

And SIEMENS MARTIN

Open Hearth Steel

GALVANIZED IRON — Demand is fair, but, though it would entail an advance to lay down fresh supplies, prices are, as yet, unaltered. We quote: Queen's Head, $4.55 to $4.80; Comet brand, $4.30 to $4.55, according to the size of the order.

INGOT COPPER—There has been a good inquiry for this metal, and values are stiff at 19½ to 20c.

INGOT TIN — With excited markets outside, as intimated some weeks ago, the local market is firm at the rise last noted, and no orders can be filled now for less than 32c.

PIG LEAD—Trade is fair, and prices are steady at $4.25.

LEAD PIPE — Unchanged at the basis quoted last week: Ordinary, 7c., and composition waste, 7½., with 20 per cent. discount.

IRON PIPE—While local mills are asking pretty near the equivalent of jobbing prices to fill new orders, the range in the latter respect is unchanged, as jobbers are still working on stock contracted some time ago. We quote as follows: Black pipe, ⅛ and ¼-inch, $3.12; ⅜-inch, $3.09; ½-inch, $3.72; 1-inch, $5.14; 1¼-inch, $6.82; 1½-inch, $8.66, and 2-inch, $11.02. Galvanized pipe, ⅛ and ¼-inch, $5.64; ⅜-inch, $6.64; ½-inch, $7.41; 1-inch, $10.12; 1¼-inch, $14.03; 1½-inch, $17.16, and 2-inch, $23.

CANADA PLATES — The wreck of the ss. Merrimac is liable to affect supplies of this staple line, as the steamer had a large quantity on board chiefly for Western points. We quote: 52's, $2.30; 60's, $2.40; 75's, $2.50; full polished, $3.15; galvanized Canada plates, $4.25 for 52's.

TINPLATES—There was a large quantity of tinplate also on the ss. Merrimac for Montreal and Ontario points, and existing stocks are extremely light. We quote as follows: Coke, I. C., $3.75; charcoal, I. C., Allaway or Comet brands, $4; do. I. X., $4.50; Lincoln, $4; P. D. Crown, $4.50; do. I. X., $5.50; Bradley's, $6.25.

TERNE PLATE—The firm feeling in these is fully maintained, and we quote $6.75 to $7.

COIL CHAIN — Business is moderate, but values are firm. We quote as follows: No. 6, 10¾c.; No. 5, 9¾c.; No. 4, 8¾c., and No. 3, 7¾c. per lb.; ¼-inch, $6; 5-16, $4.75; ⅜, $4.25; 7-16, $4.10; ½, $4; 9-16, $3.95; ⅝, $3.85; ¾, $3.65, and ⅞, $3.55 per 100 lb.

SHEET ZINC—A fair movement is noted, and values are steady at 8 to 8¼c.

ANTIMONY — Quiet and unchanged, at 10 to 11c.

SPELTER—As reported last week at $7.

GLASS.

With deliveries very backward and stocks extremely light, prices are firm at the rise noted last week. We quote: First break, $1.90; second, $2 for 50 feet; first break, 100 feet, $3.60; second, $3.80; third, $4.25; fourth, $4.50; fifth, $5; sixth, $5.50, and seventh, $6.

PAINTS AND OILS.

There has been no radical change in any line except turpentine since last week. Locally, in this district, the weather has been unfavorable to a good consumptive movement, but, in other sections, it has been all that could be desired for outside work, and, consequently, the movement from third hands has been all that could be desired. Turpentine is 2c. higher.

WHITE LEAD—Best brands, Government standard, $6.00; No. 1, $5.62½; No. 2, $5.25; No. 3, $4.87½.

DRY WHITE LEAD—$4.75 in casks; kegs, $5.

RED LEAD—Firm; casks, $4.75; in kegs, $4.50.

WHITE ZINC PAINT—Pure, 8c.; No. 1, 6½c.; in oil, pure, 9c.; No. 1, 7½c.

PUTTY—We quote: Bulk, $1.65; bladders, in bbls., $1.80; bladders, in cases, $1.95; in tins, $2.05 to $2.30.

LINSEED OIL—We quote: Raw, 57c.; boiled, 58c., five to nine-barrels, 1c. less, ten and twenty-barrel lots open, net cash, plus 2c. for 4 months. Delivered anywhere in Ontario between Montreal and Oshawa at 1c. per gallon advance and freight allowed.

TURPENTINE—One to four barrels, 63 to 64c., two to four-barrel lots, 1c. less, five barrels and over, open terms, the same terms as linseed oil.

MIXED PAINTS—Firm; $1 to $1.20 per gallon.

CASTOR OIL—Firm; at 7½ to 8c.

SEAL OIL—35½ to 37½c.

COD OIL—35 to 37½c.

NAVAL STORES—Fair demand for all lines, and prices show no change. We quote: Resins, $2.75 to $4.50, as to brand; coal tar, $3 to $3.50; cotton waste, 4½ to 5½c. for colored, and 6 to 7½c. for white; oakum, 5½ to 6½c., and cotton oakum, 9 to 11c.

PARIS GREEN—We quote: 250-lb. casks, 13½c.; 50-lb. drums, 14c.; 1-lb. packages, 15c.; ½-lb. packages, 16½c.; 1-lb. tins, 15½c.

PETROLEUM.

As last reported. We quote: Crown, Acme, the new Sarnia oil, 15½c.; Perfection and Silver Star Canadian refined, 14½c.; American prime white, 17c.; water white, 18c., and Pratt's astral, 19½c., in small quantities.

HIDES.

Continue steady; beef, 9, 8 and 7c.; calfskins, 11 and 9c.; lambskins, 30c. each, and sheepskins, 85c.

COAL.

Quiet. We quote as follows: Stove, $5.75; chestnut, $5.75; egg, $5.50; Scotch grate, $6; Scotch steam, $4 to $4.50; Tower ports steam, $3.50 to $3.75.

MONTREAL NOTES.

Turpentine has again again advanced 2c. this week.

The wreck of the ss. Merrimac will seriously interfere with supplies of Canada and tinplate. She had a large quantity of both on board.

ONTARIO MARKETS.

TORONTO, July 21, 1899.

HARDWARE.

THERE have not been the same marked changes in prices that characterized the hardware trade last week, but there have been some changes, nevertheless, while in wire and wire products the outlook is certainly for higher prices, on account of the advances in the United States this week. Poultry netting and woven wire fencing are higher, and Canadian-made scales have advanced 10 per cent. These are practically the only changes that have been made in quotations of hardware this week. The volume of business is, on the whole, better than it was a week ago. There is not much movement in barbed wire, but a fairly good business is being done in oiled and annealed, galvanized and hay-baling wire. Wire nails are still meeting with a fair demand, and orders are being booked for horse nails. Cut nails are quiet. Screws, rivets and burrs and bolts continue in good demand. Enameled ware is still selling well, but tinware is quiet. The demand for ice cream freezers is keeping up remarkably well. In sporting goods, such as ammunition, guns and rifles, a nice trade is being done. Trade in gas and oil stoves is pretty well over for the season.

BARBED WIRE—Prices advanced 20c. per 100 lb. in the United States this week, but no change has been made here yet. The volume of business locally is light. We quote $3.25 f.o.b. Toronto.

SMOOTH STEEL WIRE — A further improvement is to be noted in the demand for hay-baling wire, and quite an active business is now to be reported. The demand is fair for oiled and anealed wire. The base price is higher in the United States, but in Canada $2.70 f.o.b. factory is still the ruling figure.

GALVANIZED WIRE — Trade is rather quiet with prices firm. We quote: Nos. 6, 7, 8 gauge $3.40; No. 9, $2.90; No. 10, $3.50; No. 11, $3.55; No. 12, $3.05; No. 13, $3.15; No. 14, $3.90; No. 15, $4.50; No. 16, $4.65.

WIRE NAILS—A fairly active sorting-up trade is being done at firm and unchanged prices, namely $2.75 per keg f.o.b. Toronto. Prices have advanced 20c. per keg in the United States this week.

CUT NAILS — Trade is quiet and prices unchanged at last week's advance. We quote: $2.25 f.o.b. Toronto, Hamilton and London.

HORSE NAILS — A fair number of orders are being booked for future delivery, but immediate business is quiet. We quote: Standard, oval head, 50 per cent.; Acadia, countersunk head, 50 and 20 per cent.

HORSESHOES — Trade is quiet and featureless. We quote as follows: f.o.b. Toronto, Hamilton, London and Guelph: No. 2 and larger, light, medium and heavy iron shoes, $3.60; snow shoes, $3.85; light steel shoes, $4.00; featherweight shoes, all sizes, $5.25. No. 1 and smaller, light, medium and heavy iron shoes, $3.85 per keg; iron snow shoes, $4.20; light steel shoes, $4.15; featherweight steel shoes, all sizes, $5.25.

SCREWS — Business continues good. We quote as follows: Flat head bright, 82½ and 5 per cent. off the list; round head bright, 75 and 5 per cent.; flat head brass, 75 and 5 per cent.; round head brass, 67½ and 5 per cent.; flat head bronze, 67½ and 5 per cent.; round head bronze, 62½ and 5 per cent.

BOLTS — Business continues good and prices firm at the recent advance. We quote: Norway bolts, full square, 65 per cent.; common carriage bolts, 5-16 and under, 55 per cent.; ditto, ⅜ and larger, 50 per cent.; ditto, full square, 65 per cent.; machine bolts, all sizes, 55 per cent.; coach screws, 67½ per cent.; sleighshoe bolts, 72½ per cent.; blank bolts, 55 per cent.; bolt

WORKS: Toronto Junction. CITY OFFICES: 74 York St.

ends, 62½ per cent.; nuts, square, 3¾c.; nuts, hexagon, 4¼c.; tapping nuts, 60 per cent.; tire bolts, 60 and 10 per cent.; stove bolts, 60 and 10 per cent.

RIVETS AND BURRS—A fair trade is still to be noted at unchanged quotations. We quote as follows: Carriage section, wagon box rivets, etc. (steel), 60 per cent. off the list; ditto (Norway iron), 55 per cent.; black M rivets, (steel) 60 per cent.; ditto (Norway iron), 45 per cent.; iron burrs, 40 per cent.; copper rivets, 35 per cent.; bifurcated, with box, $1.25; coppered iron rivets and burrs, in 5-lb. carton boxes, 30c. per lb.

ROPE — A steady market is to be noted, both in regard to price and business. We quote: Sisal, 7-16 in. and larger, 10½c. per lb.; ⅜ in., 11c.; ¼ and 5-16 in., 11½c. Manila, 7-16 in. and larger, 12c. per lb.; ⅜ in., 12½c.; ¼ and 5-16 in., 13c.; New Zealand, 9½c. per lb.; Deep sea line, 13½c. for water laid, and 14½c. for machine-made; hemp, 7 to 9c.; lath yarn, 8¾c. Clotheslines, 48 feet, 90c.; 60 feet, $1.20; 72 feet, $1.50; 100 feet, $2.

CHURNS — A fair business is still to be noted in this line. We quote as follows: Metal frame—No. 0, $3; No. 1, $3.20; No. 2, $3.40; No. 3, $3.75; No. 4, $4.50; No. 5, $5.90. The price of wooden frames is 15c. per churn less than the above. Terms, 3 per cent. off 30 days f.o.b. Toronto.

WRINGERS—Trade continues fair, with unchanged prices. We quote as follows: "Leader," $60 per doz.; "Royal Canadian," $58; "Royal American," $48. Prices are all f. o. b. Toronto, Hamilton, Brockville, and Montreal. Discount, 45 per cent. Terms, four months, or 3 per cent., 30 days.

ICE CREAM FREEZERS — Trade in this line keeps up remarkably well.

BUILDING PAPER—Trade keeps fair. We quote: Plain building, 28c. per roll; tarred lining, 35c., according to quality; tarred roofing felt, $1.40 per 100 lb.; carpet felt, $2.25 per 100 lb.

GREEN WIRE CLOTH—This is still scarce and firm at $1.75 per 100 square feet.

POULTRY NETTING AND WOVEN FENCING—A notice has been issued by the manufacturers stating that, owing to the high cost of raw material, they have been compelled to advance their prices. The best discount now obtainable on wire netting is 40 per cent., while woven fencing to the retail trade is 7½c. per rod. Notwithstanding this advance, prices cannot be guaranteed to apply to orders any other than of moderate size.

SCREEN WINDOWS AND DOORS—There is still a scarcity in this line and it seems likely to remain so until the close of the season.

SPADES AND SHOVELS — Business is moderate and discount unchanged at 40 and 5 per cent.

HARVEST TOOLS, ETC.—Prices are firm at the recent advance, and trade is fairly good with still a scarcity to be noted in several lines. Discount 60 and 5 to 60 and 10 per cent.

STOVES—A good many shipments are yet being made of ordinary stoves, but a greater number are expected to go forward next month. In gas and oil stoves, the season's trade is about over.

ENAMELED WARE — Trade has been particularly good the past week, with the demand chiefly for preserving kettles, although quite a few staple lines have been going out.

TINWARE—The demand continues to fall off, and only a moderate business is now being done.

SPORTING GOODS—A good trade is still to be noted in ammunition, guns and rifles. The demand is particularly brisk for ammunition.

CEMENT—A good business is being done with prices firm and unchanged. We quote in barrel lots as follows: Canadian Portland, $2.65 to $2.90; English do., $3; German do., $3.10; Belgian do., $2.70; Canadian hydraulic cements, $1 to $1.10; calcined plaster, $1.90; asbestos cement, $2.50 per bbl.

METALS.

The market is still advancing in nearly all kinds of metals outside, and on the local market quotations are being made to conform with the outside conditions, although there have not been nearly so many changes as last week. We have again advanced the price of black sheets, lead, solder, copper and hoop steel.

PIG IRON — Prices have advanced again in the United States during the week from 25 to 50c. on foundry iron.

BAR IRON—The demand continues good and prices are firm at the $2 base.

BLACK SHEETS—There has been a further advance in local quotations on black sheets, and 28 gauge is now quoted 10c. higher at $3.10

GALVANIZED IRON—A good many cases have been shipped during the past week, and quite a few inquiries for quantities have been received. Stocks on the local market are light. To show how quickly any spot stocks are picked up the following may be cited: This week a small lot had come on here in regard to which some mistake was made. Notice was sent out to the local jobbers offering this at a certain price. Several jobbers immediately intimated that they would take it, but the lot was so quickly taken up that a number were disappointed. 28 gauge is firm at 4.75 per 100 lb.

COPPER—There has been a further advance of 1c. per lb. in the price of ingot copper; 20 to 21c. represents the ruling quotation. The demand for ingot copper is fairly active, and a good business is being done in sheet copper.

BRASS—The demand for brass continues to fall off, but prices are firm and unchanged.

PIG TIN—There have been further advances in the outside markets in pig tin. Locally, Lamb and Flag and Straits are quoted uniform at 33 to 34c. per lb. The demand during the past week has improved, and a fairly active business is being done.

TINPLATES — The market is decidedly firm, and dealers are gradually advancing their prices. Business is more active than it was a week ago.

CANADA PLATES—A good many shipments of Canada plates that were booked early in the season are now being sent forward, and the only complaint is that not much money is being made by the shipper on these particular orders. Trade is, on the whole, fairly good. We quote: All-dull, $2.75; half-polished, $2.85; all-bright, $3.20.

SEALED TENDERS addressed to the undersigned and endorsed "Tender for Supplying Coal for the Dominion Buildings," will be received at this office until Friday, 4th August, next, for the supply of Coal for the Buildings throughout the Dominion.

Specifications can be seen and forms of tender obtained at this office, where all necessary information can be had on application.

Persons tendering are notified that tenders wil not be considered unless made on the printed form supplied, and signed with their actual signatures.

Each tender must be accompanied by an accepted bank cheque, made payable to the order of the Honorable the Minister of Public Works, equal to ten per cent. of amount of tender, which will be forfeited if the party decline to enter into a contract when called upon to do so, or if he fail to complete the work contracted for. If the tender be not accepted, the cheque will be returned.

The Department does not bind itself to accept the lowest or any tender.

By order,

E. F. E. ROY,
Secretary.

Department of Public Works,
Ottawa, July 8th, 1899.

Newspapers inserting this advertisement without authority from the Department will not be paid for it. (30)

BROWN & CO.

Manufacturers of

All sizes of Hot Pressed Nuts, Square and Hexagon

IRON PIPE — The demand continues active, and local jobbers have this week made a further advance in the price of black iron pipe. In our last issue, in the market report, ⅛ to ⅜ inch pipe was quoted at $3.10; it should have read $3.25. Quotations on black pipe are now as follows: ¼ to ⅜ inch, $3.35; ½ inch, $3.40; ¾ inch, $4; 1 inch, $5.50; 1¼ inch, $7.35; 1½ inch, $9.25; 2 inch, $12.50; 2½ to 6 inch, discount off the list 45 per cent. Black iron pipe, 2½ inch and larger, is almost unobtainable at the moment, and these sizes are being more firmly held than even the other sizes. Galvanized pipe is unchanged at the following quotations: ½ inch, $6.50; ¾ inch, $8; 1 inch, $11; 1¼ inch, $15.25; 1½ inch, $19; 2 inch, $27.

PIG LEAD — There has been a further advance of ¼c. per lb. in the price of pig lead, and we now quote 4½ to 4¾c. The demand is fairly good.

LEAD PIPE—There is a fair demand at unchanged prices. We quote: Ordinary pipe, 7c.; waste, 7½c. Discount, 20 per cent.

RANGE BOILERS—These continue in good demand at firm prices. We quote: Galvanized, 30 gals., $9; 35 gal., $10; 40 gal., $11. Copper, 30 gal., $22; 35 gal., $26; 40 gal., $30; discount off copper boilers, 10 per cent.

COIL CHAIN — The demand is moderate only and prices unchanged. We quote: ¼ in. $6.75; 5-16 in., $4.75; ⅜ in., $4.30; 7-16 in., $4.15; ½ in., $3.05; ⅝ in., $3.85; ¾ in., $3.75.

SHEET ZINC—A little more activity is noted in this line, but prices are unchanged at 8¼ to 8½c. for cask and smaller quantities respectively.

SPELTER—Trade is quiet in this line and prices unchanged at 7½ to 7¾c. per lb.

SOLDER—This is advancing and some of the dealers are now quoting as high as 20 to 21c. for half-and-half; 19 to 20c. for refined, and 17 to 18c. for wiping.

ANTIMONY — Trade is still quiet and featureless, with quotations nominally unchanged at 11 to 11½c. for Cookson's.

SOIL PIPE—Trade is fair at the recent advance. Discount 50 and 10 per cent.

PAINTS AND OILS.

The amount of business being done is unusually large for July. Turpentine is moving in larger quantities than it has at any other time this season. Linseed oil, white lead and sundries are in active demand from all sections of the country. The city demand is moderate. Turpentine shows a slightly easier feeling in the South, but prices are well maintained here. All kinds of materials are firm in tone, with an advance of 20c. in New Brunswick plaster.

GUM SHELLAC—In cases, 24c.

PLASTER PARIS — Ordinary, $1.75 per barrel; New Brunswick, $2 to $2.20 per barrel.

PUMICE STONE—Powdered, $2.50 per cwt. in barrels, and 4 to 5c. per lb. in less quantity; lump, 10c. in small lots, and 8c. in barrels.

LIQUID PAINTS—Pure, $1 per gallon; No. 1 quality, 90c. per gallon.

SEAL OIL—Is quoted at 59 to 60c. per gallon, and yellow seal at 49 to 50c.

CASTOR OIL—East India, in cases, 9c. per lb. and 10c. for single tins.

LINSEED OIL — Quotations to outside western points are (freight allowed): Raw, 1 to 4 barrels, 57c.; boiled, 1 to 4 barrels, 60c. Prices in Toronto, Hamilton, London, are 1c. per gallon less.

TURPENTINE—We quote for outside western points, freight allowed, 1 to 4 barrels, 65c.; in less quantities than barrels, 5c. per gallon extra will be added and packages charged for. Prices in Toronto, Hamilton, and London are 1c. less than the above. Terms, net 30 days.

GLASS.

One Toronto jobbing house is taking into stock, this week a consignment of Belgian glass. This is the first arrival of the season, but it is difficult to say when the next consignment will arrive. There is certainly no word of it yet. Meanwhile, stock prices in Toronto are firm, but unaltered, at the following figures: Star, first break in 50-foot boxes, $2, and in 100-foot boxes, $3.75; double diamond under 25 united inches, $6, Toronto Hamilton and London; terms 4 months or 3 per cent. 30 days.

OLD MATERIAL.

Heavy copper scrap is 1c. cheaper. New light scrap copper and bottoms have declined ½c. per lb. Heavy red scrap brass is 1c. dearer. We quote as follows: Agricultural scrap, 55c. per cwt.; machinery cast, 60c. per cwt.; stove cast scrap, 45c.; No. 1 wrought scrap, 55c. per 100 lb.; new light scrap copper, 12½c. per lb.; bottoms, 11c.; heavy copper, 15c.; light scrap brass, 7½c.; heavy yellow scrap brass, 10c.; heavy red scrap brass, 11c.; scrap lead, 2½c.; zinc, 3c; scrap rubber, 4c.; good country mixed rags, 65 to 75c.; clean dry bones, 45 to 50c. per 100 lb.

COAL.

Prices are firm, but unchanged. An unusually heavy demand is noted. We quote as follows: Anthracite for July delivery at Buffalo and bridges: Egg, stove and nut, $4.50 per gross ton, or $4.01 per net ton; grate, $4.25 per gross ton or $3.79 per net ton.

PETROLEUM.

The demand is improving slightly. Prices are steady and unaltered. We quote, in barrels, Toronto, as follows: Canadian, 14c.; Sarnia prime white, 14c.; Sarnia water white, 15c.; photogene, 15½c.; American water white, 16½c.; Pratt's astral, 18c.

MARKET NOTES.

Scrap copper is ½ to 1c. per lb. cheaper.

New Brunswick plaster paris is 20c. dearer.

Ingot copper is 1c. per lb higher at 20 to 21c. per lb.

Lead is quoted fractionally higher at 4½ to 4¾c. per lb.

The base price of hoop steel has been advanced to $2.75.

The discount on poultry netting has been reduced to 40 per cent.

Scales of Canadian make have been advanced 10 per cent. in price.

Black sheets are 10 to 15c. higher, 28 gauge being quoted at $3.10.

PAINTMEN'S PICNIC.

THE employes of The Sherwin-Williams Co., with their wives and friends to the number of 250, attended their first picnic on July 13, at Isle Gros Bois. The steamer Hochelaga left her wharf at 8 o'clock, and was soon sailing down the river. The morning was beautiful, and the sweet strains of Rotto's orchestra beguiled the time till the Island was reached at 9.30 o'clock. The landing was soon effected, and then began one of the most delightful day's outing of the season.

As soon as everything had been taken ashore the programme of games was commenced. These games consisted of running races, jumping, a pipe race, and a needle and thread race. The two last named were very enjoyable, and caused no small amount of amusement to the spectators. All the games were closely contested, and in many of the events there were 30 competitors. A tug-of-war concluded the first part of the programme. At 12.30 o'clock luncheon was served on tables conveniently placed in shady nooks. After luncheon a base-ball game was played between teams representing office and works, which resulted in favor of the office by a score of 6 to 5.

For those who did not care for baseball ample provision was made for dancing, shooting, etc. The dancing seemed the greatest attraction, however, and this was kept up till 6.30 o'clock, when all once more embarked for the city.

On the return voyage the prizes were distributed, and short addresses delivered by Messrs. Ballantine, Seiplin, and Johnson. Letters were read from Messrs. Sherwin, Cottingham, E. A. Wood, and others, all regretting their inability to attend, but wishing one and all a pleasant day. The orchestra then played "He's a Jolly Good Fellow," and other popular airs, winding up with "God Save the Queen."

So great was the success of this, the first, outing, that the management has decided to make it an annual affair.

PATENT STATISTICS.

The Canadian patent office issued a total of 183 patents during May, 1899. Of this number, 131 were granted to citizens of the United States; Great Britain, 10; Germany, 6; France, Switzerland, Sweden and Australia 1 each, and 33 to citizens of Canada.

It may be worthy of mention that exactly one-half of all the patents granted to Canadian inventors were procured by one firm, Marion & Marion, of Montreal, the others being distributed among about 100 different firms scattered throughout the Dominion.

MANITOBA MARKETS.

WINNIPEG, July 17, 1899.

WHOLESALE houses report an active business all week, there being a much greater amount of buying than is usual at the exhibition time. The influx of country merchants was very large, and they all appeared in excellent spirits and fully prepared to do a big fall trade.

Prices in all lines are firm and there have been several advances during the week.

Mr. O'Connor of St. John's N.B., was a visitor in the city during the week. He was here in the interest of his binder twine business, and also to take in the fair. Binder twine, by the way is a little slow. Merchants at outside points report that orders are not coming in as freely as usual at this time of year. The crop is a heavy one, and there will be a great deal of twine needed, but there seems to be an idea abroad that prices will drop. At present the figures are ½c. per lb. advance on all spring contracts. Wire nails have again advanced 10c.

Harvest tools are quoted this week at 62½ per cent off. All other prices remain unchanged for the week :

Barbed wire, 100 lb	$3 75

NEW ACETYLENE COMPANY.

A new company has been formed among Montreal capitalists to manufacture and sell acetylene gas generators. Joseph W. Pyke is one of the promoters. They have not yet decided upon their premises, but will do so at once.

HAMILTON'S BIG STEEL COMPANY.

Letters of incorporation have been granted to Trew Wood, M.P., merchant; Albert Edgar Carpenter, manufacturer; Charles Seward Wilcox, manufacturer; John Milne, manufacturer; William Southam, publisher; Aaron Morley Wilcox, manufacturer, and Charles Edward Doolittle, manufacturer, all of Hamilton, Ont., under the style of The Hamilton Steel and Iron Co., Limited, with a capital of $2,000,000.

The company has been authorized to explore for, mine or buy iron, nickel and other ores or metals, and to crush, smelt, produce and manufacture them; in fact, to carry on generally a smelting and rolling mill business for the manufacture of iron and steel rails and all kinds of muck bar and refined roll bar iron, Bessemer and other kinds of steel. It has also been privileged to build or acquire vessels, wharfs, aqueducts, water-power, railroads, etc., such are necessary or convenient for the business of the company.

THE BEAUTIES OF ST. JOHN, N.B.

The New Brunswick Tourist Association never let up in their efforts to make the world recognize the varied attractions their Province offers to the pleasure or health seeker. The scenic and climatic advantages of New Brunswick are great. So are the sports offered to the fisherman or hunter. St. John is considered by the association as the natural centre of and outfitting point for tourists. The beauties of the city and of the country adjacent to it are attractively set forth in an elegantly gotten up booklet, containing forty half tone views, presenting the city and country in a most attractive manner.

HEATING AND PLUMBING

PLUMBING AND HEATING CONTRACTS.

J. W. HUGHES, Montreal, has contracts as follows: Berks & Co., extension to their store on Philips Square; a new house for Jonathan Hodgson on Pine avenue; Geo. Hydes, new house on Simpson street; five stores and dwellings for W. W. Ogilvie on Notre Dame street; the plumbing and heating of the Standard Shirt Co's extension on Delormier avenue; the contract for plumbing and heating the new Westmount school on Oliver avenue; also a lot of alterations in the Herald building, corner St. Francois Xavier and Notre Dame streets.

James Ballantyne, Montreal, has the contract for Tooke Bros'. new factory at St. Henry.

Garth & Co., Montreal, have the contract for S. Greenshields Son & Co's new store Victoria Square.

D. Ouimet, Montreal, has the contract for plumbing and heating of four tenements on Charlemagne street.

John A. Gordon, Montreal, has the contract for the plumbing and heating of A. F. Gault's new apartment house.

Gordon & Eagan, Montreal, have the contract for plumbing and heating McIntyre's new store on Victoria Square.

Mr. Walsh, Montreal, has the contract for plumbing and heating in C. S. Campbell's new summer house at St. Laurent.

J. Lamarche, Montreal, has the contract for the plumbing, heating and roofing of two houses for Mr. Mercier, Green avenue; also for the copper roofing of the post offices at Dalhousie, N.B., and Truro, N.S.

Carroll Bros., Montreal, have the following contracts on hand: Four houses for Thos. Collins, on Tupper street; house on St. Antoine street for Mr. Hicks; furnaces in ten new houses for J. P. Whalen; house and stable for Mr. D. Drummond; six houses on Cheminville street for Mr. Kearns.

W. J. McGuire, Toronto, has contracts for heating and plumbing in the factory for Brown Bros., on Wellington street west, and for a warehouse at the corner of Bay and Wellington streets. This firm also put in the lowest tender for plumbing in the St. Lawrence Market building, Toronto. Their figure was $10,383.

E. C. Mount, Montreal, has the following contracts: Plumbing for Foley's apartment house on Metcalf street; plumbing and heating of six houses for G. A. Bulmer at Westmount; heating two houses for Mrs. Taylor, Westmount; steam heating of The Edwardsburg Starch Co.'s new mill at St. Luce, Que.

J. W. Graham, Montreal, has the contract for plumbing and heating the new Catholic high school.

Blouin, Delfosse & Latourelle, Montreal, have the following plumbing and heating contracts: Grey Nunnery at Beauharnois; Grey Nunnery at St. Jerome; Grey Nunnery, St. Matthew street, Montreal; Grey Nunnery, Nazareth asylum, city; Good Shepherd, St. Martin; heating of new church at "The Cedars."

Lessard & Harris, Montreal, have the contracts for the plumbing of the La Presse building; the heating of Foley's new apratment house, on Metcalf street; the steam-heating of St. James the Apostle Church; the plumbing, heating and roofing of Mr. Stroud's new house, Westmount, and the plumbing and heating of St. Mary's Academy.

Purdy, Mansell & Co., Toronto, have contracts for plumbing and gas-fitting in four houses on Bedford road; for plumbing, gas-fitting and heating in a large residence on Walmer road, for C. A. Dinnock; for hot-water heating in Geo. H. Hees & Son's warehouse at 71 Bay street, and for plumbing, heating and gas-fitting in a residence for T. P. Stewart, on Delaware avenue, Toronto.

ASSOCIATIONS TO BE ORGANIZED.

When some of the Toronto master plumbers were entertained last Saturday by some of the St. Catharines, Ont., masters they were informed that there is every likelihood of an association being formed in St. Catharines, in the near future.

Another association likely to be organized before long will be known as the Guelph district association. Some weeks ago W. Smith, past-president of The National Association, visited Guelph to encourage the masters there to organize.

Mr. Mahoney, of Mahoney Bros., was in Toronto the other day, and while in that city informed some of the National executive officers that the Guelph masters were ready for organization, and were endeavoring to persuade the Galt and Berlin masters to unite with them in forming a district association. Their efforts have been so far successful that the completion of the organization is expected to be shortly effected.

TORONTO PLUMBERS' PICNIC.

The picnic of the Toronto Journeymen Plumbers' Union to St. Catharines on Saturday last was a decided success. In the neighborhood of 500 of the plumbers and their friends took in the trip. Included in the number were the following members of the Master Plumbers' Association: Messrs. Joseph Wright, J. H. Wilson, A. S. Purdy, W. Mansell, Dennis McMullen, R. T. Robinson, A. H. Richardson, J. E. Fullerton, David Menzies, Albert Mashinter and W. H. Meredith. The master plumbers were entertained in St. Catharines by Messrs. Chatfield, Gourlay, Bauld and Parnell, representing the St. Catharines master plumbers.

The programme of sports prepared by the committee was a good one, including, besides 20 events such as running, jumping, bicycle races, etc., a baseball match and a tug-of-war, in each of which the plumbers were pitted against the steamfitters. The plumbers won the baseball match, but the outcome of the tug-of-war was such that both teams are said to have won it.

PLUMBING AND HEATING NOTES.

Architect Dumaresque's plans for the new Infant's Home at Halifax, N.S., have been accepted.

The new machinery hall at the Exhibition grounds, Toronto, will cost $13,080, without the machinery.

The faculty of McGill College is talking of renovating and adding another storey to the medical building.

The members of St. Andrew's Church, London, Ont., have decided to spend $25,000 in improving their church.

There is talk in Montreal of another large department house down town. It is probable that it will be one of the largest in the city.

J. B. Hanley is starting to build a foundry at Midland, Ont. E. V. Donohue is asking for tenders for a business block, 60 x 30 feet, in the same place.

Arthur S. Bates, of Bates and Robinson, Toronto, who went to Muskoka for his health a couple of weeks ago, has returned, but is not yet recovered sufficiently to start work.

The Ontario Government has made a new agreement with The Niagara Power Co., whereby the latter surrenders its monopoly privileges.

THE SOLDERING OF ALUMINUM.

SCARCELY a week passes, says The Metal Worker, that we are not in receipt of one or more inquiries from correspondents in all parts of the country in regard to methods of soldering aluminum. For the benefit of such of our readers as are interested in this question, we print the following circular on the subject of aluminum solders, issued by The Pittsburgh Reduction Company :

"The soldering of aluminum has always been a difficult problem, and the problem has not been, up to the present time, completely solved.

"The difficulties in soldering aluminum arise from :

"1. The high heat conductivity of aluminum ; and

"2. The fact that none of the ordinary soldering salts, or any easily obtainable soldering salt, will clean the surface of aluminum.

"On account of the high heat conductivity of aluminum the heat from a soldering iron is conveyed away from the iron and from the solder so rapidly that the solder does not become sufficiently liquid to flow readily. This can be overcome to a large extent by taking steps to counterbalance the spreading of the heat. If the aluminum pieces to be soldered are small and thin, then, naturally, the difficulty is not so great as when the aluminum pieces are heavy and absorb a large amount of heat. In this latter case the soldering iron should be kept at a higher heat than is usual, and the aluminum pieces should, if possible, have been warmed beforehand.

"Whereas aluminum is properly spoken of as a non-oxidizable metal, nevertheless, the surface is covered with a very thin film of oxide, which prevents the solder from amalgamating with the aluminum. The most natural and simple way to remove this coating is to scrape it off with emery cloth or a file. If this is not possible, then it can be done by dipping the edge to be joined in a solution composed of about :

1 part hydrofluoric acid,
10 parts nitric acid,
50 parts water,

or in a solution, first of caustic soda, and then strong sulphuric acid.

"Many manufacturers, after some attempts with indifferent results, are now soldering aluminum with considerable success. Experience seems to be a very important factor in the successful accomplishment of the soldering of aluminum. A workman who, perhaps, is experienced in the soldering of other metals will meet with considerable difficulty in the soldering of aluminum, but these difficulties become less, and, in time, practically vanish as the experience of the workman increases.

"The Pittsburgh Reduction Company do not, however, recommend soldering, if any other means of making a joint can be employed. Soldered joints in aluminum, even when well made, are not as strong as soldered joints in other metals, and, on account of the galvanic action between the solder and the aluminum, the joint will gradually disintegrate, especially if by exposure to water or by other means the conditions are particularly favorably for galvanic action. In dry places, however, a soldered joint will apparently last an indefinite time. Samples of soldered joints submitted to The Pittsburgh Reduction Company a number of years ago, and which have been kept in the office, are quite as good now as when first sent.

"In view of the high heat conductivity of aluminum, it follows that a solder which will melt at as low a temperature as possible should be used. There are a number of solders on the market having this characteristic, or one can easily be made to suit the occasion. Nearly all aluminum solders contain a small portion of phosphor tin."

PLUMBING WORK IN MONTREAL.

There is an unusual amount of work being done in Montreal this season, but, as usual, everybody is complaining about the low prices of tenders. It seems a pity that when all other trades are taking advantage of higher prices, this trade should be sticking to the old ways.

TORONTO BUILDING PERMITS.

Building permits have been granted in Toronto to M. Clemes, for a two-storey and attic brick residence at King street and Jamieson avenue, to cost $4,500 ; to W. Goodman, for a summer cottage at Centre Island, to cost $1,200 ; to G. McWilliams, for four two-storey and attic brick dwellings on Seaton street, near Wilton avenue, to cost $8,500 ; to W. J. Equi, for a summer cottage at Centre Island, to cost $1,000 ; to Wm. Christie, for a two-storey addition to his residence at Queen's Park and St. Alban's street, to cost $1,200 ; to M. A. McMillan, for a pair of semi-detached brick dwellings on Howland avenue, to cost $5,200 ; to The Bell Telephone Co., for a one-storey brick storage building on the east side Cowan avenue, near Queen street, to cost $5,300.

Building permits have been issued in Ottawa to Capt. J. Wood, for a brick residence on O'Connor street, to cost $7,000 ; to W. A. Clarke, for a two-storey brick veneer residence, to cost $6,000.

CONTRACTS MADE, PENDING AND ASKED FOR.

A new fire hall is to be erected in Woodstock, Ont.

Tenders are being asked for a house for A. Peet in Chatham, Ont.

Tenders will be asked shortly for the new Merchants Bank premises, Montreal.

The Shawville, Que., council are preparing to put in a waterworks system.

Tenders are being asked for a new Roman Catholic church at Kinkora, P.E.I.

Tenders are being asked for for a new house, 64 McTavish street, Montreal.

Tenders are being called for for plumbing and heating the new cotton factory at St. Henry.

Geo. Craddock, architect, is asking for tenders for work in the new synagogue, London, Ont.

Inspector Noxon has recommended that a new $50,000 boys' reformatory be built at Penetanguishene, Ont.

Tenders are asked for for the plumbing and heating of Hon. L. J. Forget's new summer residence at St. Anns.

Architect Long & Son, St. Thomas, Ont., are preparing plans for a residence for J. W. Wanless, of Courtright, Ont.

S. S. Bain, the florist, Montreal, is asking for tenders for plumbing and heating his new house on Lower Lachine road.

Tenders will soon be asked for plumbing and heating Morgans' new extension to their store, St. Catherine street, Montreal.

Architect Patterson, Hamilton, is preparing plans for a $25,000 building, to be erected for the Kloepfner Refining Co., of that city.

Architects Wilson & Son, Chatham, Ont., are preparing plans for a new brick veneer, two-storey block, 20x45 feet, for John Kerr, of Thamesville, Ont.

Tenders for plumbing and heating are being asked for for a new house on Wood avenue, Montreal, by Mr. St. Louis, the well-known architect.

William Ralph, hardware dealer, Cordova street, Vancouver, has bought a lot 25x100 on Hastings street west. On this he intends erecting a store including three storeys and a basement. The basement and first storey will be the full length of the lot ; the second and third storeys 90 feet deep. Parr & Fe[illegible] are the architects.

EXECUTIVE MEETING.

The local executive of The National Plumbers' Association held a meeting in Montreal on Thursday, July 20, at 4 p.m. at which matters of importance were discussed.

PALMER-DUNLOP TIRE LITIGATION.

MR. JUSTICE WILLS recently gave his judgment in the action brought by The Palmer Tire Manufacturing Company, Limited, against The Dunlop Pneumatic Tire Company and others for alleged infringement of patents. His Lordship, in giving judgment, took each patent separately. In regard to the Thomas, he said that it was very badly drawn and had apparently been subjected to two amendments, one in July, 1893, and the other in May, 1898. It was only before him in its amended shape, and there was nothing to show what it originally was. There were in the specification many ambiguous passages. The description of the patent was that of a sheet tire intended to be inflated, and it was described as a sheet of flexible material only, which was to be impervious to fluids, air and gases, and was to be inflated. In was also to be of a cylindrical form. When he came to examine the drawings and to compare them with the specifications, he found considerable divergence. Having dealt with the methods of attachment of the tire to the rim, he said that Thomas appeared to have great faith in cement and bird lime and other glutinous material. It was clear that his claim was limited to methods of construction in which the tire or the tire cover was held in grooves or the equivalents of grooves. In what the defendants had done as to attaching the rims, etc., they had done what anyone else might have done, and there was no infringement of Thomas' patent. The points raised as to the utility and sufficiency of the specification also failed. As to the Trigwell patent, he said the principle and method of attaching the rim were practically the same as in the Thomas patent, and in this case he also found there had been no infringement. On the points of disconformity and anticipation, he must follow what had been done by Justices Kekewich and Romer, and give judgment for the defendants. The Palmer patent was a question of the fabric used in the manufacture of the tires, and it was contended that Palmer had patented the fabric in question. The fabric was a composition of threads and rubber, and was vulcanized. The defendants used what they called flexifort, which served the same general purpose as the Palmer fabric and contained its material elements, but evidence had been called that a similar fabric was made before the date of the Palmer patent. On the ground of anticipation, therefore, he found for the defendants. There would be judgment on all the issues for the defendants, with costs.—Ironmonger, London, July 1.

Years of Study.

The Patent Bridled Brush that we make is the result of years of careful study—"practice makes perfect." We do not believe it is possible to improve upon its strongest points—painters will see them at a glance, even from the photographs we can send you or the brush itself.

A flexible, liquid-proof bridle, instead of cord or wire that ties bristles up into a hard knot in the centre. A Bridle that comes off and is put on in a second—a Bridle that keeps all flat brushes always flat.

Boeckhs' Bridled Brush for Painters.

BOECKH BROTHERS & COMPANY, Mfrs.
TORONTO, ONT.

This is a fac-simile of our New

Smokeless Powder Calendar

. . JUST PUBLISHED . .

It has been pronounced the most artistic calendar yet . . . published.

Size 16x19 inches. It will be good till June 1901.

We will send this postpaid to anyone sending us, through their local dealer, an order for not less than three hundred shells loaded with Smokeless Powder.

We can supply any make of shells.

JAMES HUTTON & CO., Wholesale Agents for Canada, **Montreal.**

CURRENT MARKET QUOTATIONS

July 21, 1899.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

CAUSES OF FAILURE

In the Hardware Trade and How Avoided.

As long as there are failures, subjects that furnish information how to prevent them will always be timely. We have published, in pamphlet form, three admirable papers on the above topic, in which Over-Stocking, Expense, Capital, Credit, Discounts, Buying, etc., etc., are ably discussed. We will mail the whole three essays to any address on receipt of **10 cents**

Dominion Pattern

Cow Tie AND Stall Fixture

The special features of the tie and stall fixture are well shown in the illustration. As will be noticed the chain is very short which prevents all danger of entanglement with the animal's foot. At the same time the form of the fixture is such that great freedom is allowed to the head. Because of the short chain this tie is much cheaper than the ordinary patterns.

The stall fixture is made from a tough quality of steel and is very strong. Also, owing to its circular cross-section, it is exceedingly rigid. Its simplicity, convenience, cheapness, and ease of attaching make it very popular with cow tie users.

This form of tie and stall fixture are sometimes called Niagara pattern.

American or Flat Link Chain,

for years the standard cow tie chain in "the States," is now rapidly coming in favor in Canada. Its short link, handsome appearance and smooth surface—which cannot injure the animal's neck—make it superior to all other styles of chain for cow ties.

For sale by all Jobbers; manufactured by

ACTIVITY IN CANADIAN PIG IRON.

IN view of the extraordinary activity which prevails in the pig iron industry of the United States, we are prone to overlook the activity which obtains in the home market.

The furnace at Hamilton, for instance, is very busy, and, what is more, it is likely to be so for some time to come, the entire output of the furnace for this year having been sold.

Last week, The Hamilton Furnace Co. withdrew its quotations, and, this week, it is quoting $21 per ton at the furnace. Orders for delivery the first half of next year have been taken at $20 at the furnace.

It is evident that consumers who have not yet contracted for supplies of Hamilton iron will experience difficulty in getting delivery.

Much the same position obtains in Great Britain and in the United States.

Importers in Canada find it almost impossible to get firm offers from Scotland on Summerlee or any other of the leading brands of British iron.

Cables received in Canada on Tuesday last advised that Scotch warrants had risen to 74s. 6d., and on the following day there was an advance of another shilling, bringing the quotation up to 75s. 6d.

This means that Scotch warrants have advanced 6s. per ton since July 1. The principal brands of Scotch pig iron are selling at 80s. f.o.b. Glasgow.

In the United States the pig iron market continues to advance, while supplies are still scarce.

TURN ON THE LIGHT.

He who thinks that because he has something to sell which people will want there is no need to advertise is not wise.

People will traverse in search of gold regions where never the foot of white man trod, but no man was ever known to make a tour of factories, warehouses and stores in search of something he never heard of before.

It is only after he has seen a thing advertised that he wants it, and if he wants it, he gets it, provided he has the means, and the price is right.

If you have a good thing in your factory, warehouse, or store, do not put it under a bushel; turn the light of advertising upon it.

THE RISE IN TIN.

THERE has been a most phenomenal rise in pig tin since the first of the present month.

When the month opened spot tin was quoted at £123 10s. at London, and £124 at Singapore.

To-day, £140 10s. is asked for it at Singapore, and £142 2s. 6d. at London. In New York it has risen in the same interval from $27.60 to $31.50. It is not surprising, therefore, considering this great advance, that spot prices in Canada have been marked up. As a matter of fact those in Montreal were slow, rather than prompt, in responding to the outside conditions.

Tin to-day is almost £70 above where it stood in London at the same time last year, and $11.80 higher in New York than the low point since January 1, 1899.

The statistical position of the metal continues to favor strength, the total visible supply on June 30, 1899, being 18,293 tons, as against 19,760 tons on May 31, 1899, and 23,515 tons on June 30, 1898.

Stocks on June 30 were 11,814 tons ashore, as against 14,562 tons in May, and 6,479 tons afloat, as against 5,189 in May.

The higher prices, of course, are leading to increased shipments, which explains the latter item. The Straits shipments, however, during the first half of July were 2,025 tons to all points, as against 2,325 tons in the same period in 1898, a decrease of 300 tons, and, since January 1, of 275 tons, as compared with 1898.

Some difficulty is being experienced in making the glue combination in the United States stick. There are probably too many "watery" members.

BUSINESS MEN AND POLITICAL CORRUPTION.

BOAST as men may of their political independence, there is scarcely one who does not lean towards one or other of the two great parties which have in turn ruled this country.

This is natural. To find a man who can say with truth that there is nothing in the tenets of the Liberal or of the Conservative party that does not arrange his sympathy on the side of the one or the other, we do not believe is possible. The sympathy may not be very pronounced, but it exists to some extent, nevertheless, and to an extent at times sufficient to influence him.

Proof of this is frequently seen in the actions of men who embrace some fad which requires legislation to give it effect. They one and all vow they will not support the candidate of any party which does not promise to fall in with their views; yet, when the test comes, the "independents" dissolve as a party and each marches to the poll under the banner of his respective political party.

What is wanted is not that men shall have no political affinity, but that their affinity for right shall be greater than their affinity for party.

As long as men refuse to do this we may expect to see repeated such disgracefully corrupt acts as those which characterized South Ontario during the general and bye-elections and West Elgin during the bye-election.

What is wanted is not necessarily that men shall forsake party, but the determination that unless the party sets its face decidedly against corrupt acts it cannot have their support, and, in pursuance of this, outsiders must be kept out of the constituencies who are known to be there for no good purpose. Furthermore, party leaders in constituencies, who are honest themselves, must not purposely shut their eyes to what the unscrupulous are doing for political ends.

Not long since the head of a certain local political organization, in a constituency where a great deal of bribery has been practised, told THE CANADIAN GROCER that when a certain worker with a questionable reputation politically came into his constituency to aid his party he had requested him not to acquaint him with what he was doing. "You know," he explained, "I knew that he had not come into our constituency for any good purpose, so I did not want to be mixed up with him. He did this. Consequently, if they put me into the witness box they cannot get anything out of me, for I know nothing."

If, instead of following this course, the local party leader had told this political crook to get out of the constituency, what corruption might not he have prevented.

There is no class that should be more interested in honest elections than the business men of the country. Corrupt elections do not tend to the creation of efficient representatives. Where there is not the latter efficient laws cannot in turn be expected. And what class suffer more as a result of inefficient laws than the business class? None.

Self interest should alone, therefore, be sufficient to stir them up to a sense of their duty.

THE CANADIAN IRON BOUNTIES.

Hon. Mr. Fielding's bill, providing for the gradual abolition of the bounties on iron and steel, came up for its second reading in the Senate on Tuesday last.

A feature of the discussion which took place was the efforts of several of the Senators to have Newfoundland ores considered under the bill the same as domestic ores.

It was pointed out that this could only be done when Newfoundland became a part of the Dominion. The bill was eventually read a second time.

The bill provides for a gradual reduction in the bounties until 1907, when they are to cease altogether.

CANADA'S COAL PRODUCTION.

The production of coal in Canada last year, according to recently published figures, was 3,714,217 tons. This is an increase of nearly 200,000 tons, compared with 1897.

Of the Provinces, Nova Scotia, of course, leads with 2,247,088 tons. The quantity produced in British Columbia, taking into account the output from the Crow's Nest Pass mines, was 1,127,869 tons. The output of the latter mines was 9,954 tons. The output in Manitoba and the Northwest Territories was 332,260 tons, while New Brunswick is estimated to have turned out 7,000 tons.

The production of coal in the Dominion this year is certain to be much larger than in 1898. In British Columbia, the opening of the Crow's Nest Pass railway has not only enabled the coal from the mines of the Pass to be brought to the smelters, but to the Coast as well. Then, of course, in Nova Scotia there are the new iron and steel works in Cape Breton, while the mines in the Province will also profit by the new gas works near Boston.

PRICE OF WOVEN WIRE FENCING.

Some errors crept into the short article in last week's issue in regard to woven wire fencing.

Instead of the price being 7½c. per rod to the retailer it should have read that the advance would be about equal to that amount. The new price list for full rolls of 20 rods is as follows:

List 12—5½ x 10½ inches, No 13 Wire.

				*	*	*
Width in inches	25½	31	36½	42	47½	53
Cents per rod	62	65	67	70	73	76

Best sellers, 42, 47½ and 53 inches.

List 13—4 x 8 inches, No 13 Wire.

					*	*			
Width in inches	22	26	30	34	38	42	46	50	54
Cents per rod	67	70	72	74	77	80	83	87	90

Best sellers, 42 and 46 inches.

List 14—3 x 6 inches, No. 14 and 15 Wire.

						*	*				
Width in inches	20	23	26	29	32	35	41	47	59	71	77
Cents per rod	67	70	73	75	78	81	85	90	1.02	1.15	1.20

Best sellers, 35 and 41 inches. Widths 71 and 77 are ten rods to full roll. *Stock widths.

Half rolls of even ten rods 3c. per rod advance. All odd lengths, 6c. per rod advance.

F.O.B. Hamilton and Montreal. F.O.B. Picton 1c. per rod less.

CAST HARDWARE HIGHER.

Large manufacturers of cast hardware in the United States, such as Sargeant & Co., Peckstowe & Wilcox, Reading Hardware Co., Yale & Town Manufacturing Co., and The Russell & Erwin Hardware Co., have advanced their prices another 10 per cent.

Owing to the scarcity of raw material, still further advances are expected.

GALVANIZED IRON 25c. DEARER.

The strong position of the market for galvanized iron has led to a further advance of 25c. in the quotations of Toronto jobbers.

"Queen's Head" and similar brands are now quoted as follows: 16 gauge, $4.25; 18 to 24 gauge, $4.50; 26 gauge, $4.75; 28 gauge, $5.

The fact that local stocks are light lends strength to the situation.

TRADE IN OTHER COUNTRIES THAN OUR OWN.

CONTRACTS for No. 2 Southern foundry pig iron, delivery next year, were reported to have been made at $19 at furnace.

A ton of pig tin could have been bought in New York a year ago at about $350. Yesterday, the cost per ton was $700, or more.—New York Journal of Commerce, July 27.

THE MIDLAND IRON MARKET.

The iron trade of the Midlands is in the midst of a "boom" such as has not been experienced during the present decade. Employment is plentiful, prices are high and fairly remunerative, capital and labor are working harmoniously, and the prospects are very encouraging. The improvement first began to manifest itself towards the beginning of the year, when, at the April meeting, pig iron was quoted from 6d. to 1s. dearer on the quarter. Having thus begun to move, pig iron has advanced steadily, until at the present time almost famine prices are charged. Blast furnaces are being worked at full pressure, but the supply is much below the demand, and finished iron-producers are considerably handicapped in consequence. Yet, although only a small proportion of the furnaces built are in blast, no one appears to care to undertake the enormous cost of converting the old fashioned furnaces into modern plant, The demand for pig is excellent. Not only are inquiries being received from local consumers, but American firms, being unable to satisfy their own requirements, are appealing to Midland houses to assist them, and Germans and Belgians are making inquiries. None of these foreign orders, however, are entertained.—Ironmonger, London.

PIG IRON IN THE UNITED STATES.

Rogers, Brown & Co. report as follows on pig iron: "In the markets of the Eastern seaboard there is little now to record. A noticeable thing is the wide variation between prices. This amounts in some cases to $3 per ton on substantially the same grade of iron. A New England buyer who asked figures on leading brands last week, found delivered quotations ranging from $22.50 down to $19.50 No. 2 foundry; these differences representing the more or less oversold condition of furnaces and remoteness from point of delivery. In a letting for 900 tons ballast iron for Government transports on Tuesday, a Pennsylvanian furnace made a price of $16.40 delivered to ship in New York harbor, but it was stated that this was iron unfit for either foundry or forge uses. Other tenders on the same business ran to $22. Export markets are watched with particular interest. Middlesboro is now on a par with Scotch, which has not happened for many years. The report from Glasgow is that the Middlesboro warrants are again all in one hand, and that a corner may be engineered any day. The bear interest which has been so aggressive on the Glasgow Exchange for years past, has been thoroughly routed. English producers of pig iron are well sold, but at the new range of prices (about 71s. at the furnace) buyers are slow to place fresh orders. Continental buying is again slow, due to the rapid rise in prices that has taken place. In Europe, as well as in America, the great bulk of shipments is still going on old orders at low prices. Those who reckon the profits of the furnaces by calculation of the difference between to-day's market price and what the iron ought to cost, are wide of the mark. It is probably within the range of fact to state that there is not an important furnace interest in the United States that is not filling considerable orders at or below cost of production. This accounts for the surprise and disappointment of stockholders in such companies at the slow way in which the monthly profits improve. In one instance, in Pennsylvania, the net price realized on June shipments was lower than that of April, while the cost of iron had sharply increased during the interval. Warrants are in active demand on the Consolidated Exchange. No. 2 foundry Alabama has sold at $15.50 and $15.25. and more wanted."

NEW YORK METAL MARKETS.

COPPER — Deliveries continue free and take up so much of current output that comparatively little copper comes upon the market for immediate sale. In other words, the unsold spot stock remains light in the face of heavy production. Buyers naturally refrain as much as possible from making any new move that might give sellers any advantage, but considerable negotiation is going on quietly for metal for future delivery, and there is reason to believe that more substantial undertone of strength exists than surface appearances would indicate. Doubtless the surface would appear different but for paucity of speculators. Prices here remain at 18½c. for Lake Superior ingot; 17½ to 17¾c. for electrolytic bars, etc., and 17¼ to 17½c. for casting stock.

PIG TIN—London started the speculative ball a rolling at teriffic speed, with price up from Tuesday's latest to the extent of £1 17s. 6d., or as high as £144 for prompt delivery and £144 15s., for three months' futures. This naturally set a rapid pace in the New York market very early, and there was opportunity to realize 32c. per lb. before the business day was two hours old. The leading bulls were apparently the buyers thereat. Later cables quoted only very slight reaction in price, and the early advance here was maintained, comparatively little tin having been offered. There was, however, very little demand from the out-of-town trade or from consumers, and little if any disposition among dealers to invest. Towards the close 32⅛c. was bid and 32¼ to 32½c. generally quoted.

PIG LEAD—This metal moved along in the even tenor of the way laid out for it by the smelting company, there having been no effort elsewhere that cast as much as a shadow of serious opposition. Orders from consumers were filled at 4.55c. for round lots and 4.57½c. for carloads, while offers that had a speculative cast received virtually nothing more than passing attention.

SPELTER—Orders are coming in rather slowly at the moment, and for unimportant quantities as a rule. Offerings, on the other hand, prove to be somewhat larger than they have been of late, and prices lean slightly in buyers' favor. Car lots were quoted at 6c. on spot and 5.75c. for forward shipment, delivered here.

ANTIMONY—Regulus is steady at 10 to 11c. as to brand, and jobbing fairly.

TINPLATE—There is nothing unusual in the way of business or demand, and sellers have made no change in their position. In short, it is a steady market with only ordinary business.

IRON AND STEEL—The pig iron market remains in strong position. The output of furnaces is moved into distributive and consumptive channels rapidly, and still consumers seem to have no more iron than they require, and very little is on sale for early delivery. Export as well as home trade buying is good, and would probably be larger could more iron be obtained for desirable delivery. Of late, an average of 3,000 tons per week has been taken for European market. Home consumers are placing some orders for next year's delivery, paying, in some instances, the basis of $18.50 to $19 at Northern furnace for No. 2 foundry.

All old material is in good demand, and prices for everything on the list still show an advancing tendency.

Manufactured products are not keeping pace with crude material in the upward movement, but mills continue very busy, and higher prices for the future are anticipated.—N.Y. Journal of Commerce, July 27.

AS TO DELINQUENT ACCOUNTS.

By William A. Joyce.

THE poor we always have with us ; it makes little difference whether we refer to the poor people or to our poor accounts, for, with the latter, so long as we do, and must necessarily do, a credit business, so long we are positively sure to have a certain number of delinquent accounts. They necessarily become a part, as it were, of our stock in trade, yet how little value we usually attach to them when looking over the books of some concern that has become insolvent, for, as a rule, they are sold with the other assets for little or nothing. What an ideal life for a business man if his business could be done on a strictly C.O.D. plan or a sort of a United States postal plan—that is to say, "pay before you taste the stamp," but, if this wonderful change in business would come about, what would become of us poor credit men. I see no other vocation left for us but to become the iceman—"wouldn't you like to be the iceman?" So, for our own selves, we had better encourage the existence of delinquent accounts, and then, with a wise look and a very little action, collect some small account that no one else could possibly have collected. Then our concern sees the great necessity of advancing our salary ere some other concern discovers our wonderful value and makes it an object to change for our health, and, perhaps, like the preacher, we receive a "call" where we can do more good at a little better pay. So, having settled the fact that out of necessity we must have the delinquent accounts, let us consider for a few moments how to care for some and how to keep our percentage of losses under one-half of 1 per cent. of our business sales, which, in the shoe trade, is, in my judgment, a fair estimate of what the maximum losses should be.

It has been the custom of the concern I represent to make our statements daily, keep the same arranged alphabetically, and, on the first of the following month, send them to all purchasers during the month, marking the statement, "not a dun, but sent to you for comparison, and for the purpose of correcting any errors that may have been made." In addition to this, we send at that time statements of all past due accounts and those becoming due soon, making a list of these, and then, say, after 10 days, we send another statement to all those who have failed to settle, attaching to same a colored slip calling attention to their past due matter. If this does not have the desired effect, we follow by a notice of draft. If draft is returned unpaid, we write them a pleasant letter asking for an explanation, and, at the same time, notifying them in many cases that we shall discontinue the account, and mainly for the reason that, considering the prices upon which we sell goods, we cannot afford to change our terms beyond those named upon invoice. We find that this frequently has much better effect than by sharper treatment.

We have found by years of experience that, as a rule, it does not pay to place accounts for collection in the hands of country attorneys, either through yourself or through your own attorney. Invariably, when it reaches the attorney who is to do the collecting, we find the very party against whom we have the claim is either a relative, friend, or, in some way, closely connected, and very often is the regular attorney for the party against whom we hold the claim. Our claim is then either pigeon-holed or dallied with until we have lost all patience in the matter. Our custom has been to go directly to the party in a pleasant manner, and secure by best means possible, giving ample time.

During nearly 25 years of experience our concern has never sued what is termed a live account. After a delinquent has become insolvent we have placed claims of this nature in judgments, especially where we have anticipated that in the future there might be a chance to recover some part of the amount. We have made it a rule to be lenient and at the same time firm. We have found that by kindness and forbearance we have saved many delinquent accounts. The good credit man should look up and read Alice Carey's little poem "Don't Crowd," which, for your benefit, I will read :

Don't crowd ! this world is large enough
For you as well as me ;
The doors of art are open wide—
The realm of thought is free.
Of all earth's places, you are right
To choose the best you can,
Provided that you do not try
To crowd some other man.

What matter, though you scarce can count
Your piles of golden ore,
While he can hardly strive to keep
Gaunt famine from the door?
Of willing hands and honest hearts
Alone should men be proud !
Then give him all the room he needs,
And never try to crowd.

Don't crowd the good from out your heart
By fostering all that's bad ;
But give to every virtue room—
The best that may be had ;
Be each day's record such a one
That you may well be proud ;
Give each his rights, give each his room,
And never try to crowd.

We have another scheme which has taught many a delinquent to become a prompt and valuable customer. It may not always work, but our plan has been something after this fashion : We fund the present indebtedness and secure the same by a plan of guarantee or real estate security. We then insist upon the delinquent discounting all purchases whether of us or of other concerns ; in addition to this, we insist on a very small weekly payment, which payment must be made on a regular date. We allow discount on all his purchases, and insist upon his paying interest upon the funded indebtedness, which interest we collect either monthly, quarterly or semi-annually. We know of a number of cases where, by careful financing for good honest and industrious men, it has enabled them to become prosperous dealers.

The question often arises, "When does a man become a delinquent?" In my judgment he becomes a delinquent the minute he commences to lose his discounts, and from that time he is in no condition to compete with his neighbor who is in the habit of looking after every cent in that direction. It is well to watch all accounts that are known as "running accounts," that is, accounts that buy indiscriminately and pay what they can afford to pay on account from time to time, and making no settlement from the first of the year to the last. The days of these accounts are past, and no good business man can afford to have them or can afford to carry them, for sooner or later the blow will come, and, unless you are securely buttoned up, you will surely have an item for the debit side of your profit and loss account.

It is somewhat of a question in my mind whether these few simple facts are of much interest to you, but if they are, you are most welcome to them, and I sincerely trust the time will arrive when delinquent accounts will continue to grow less in number, which I really think they will, for it seems to me as if we were getting closer and closer to a cash basis, necessarily so on account of the close margins upon which goods are sold.

ANSWERS TO INQUIRIES.

WHO MAKES BAMBOO FURNITURE?

A Nova Scotian house inquires : "Do you know if there is a bamboo furniture manufacturer in Canada. If not in Canada, do you know of any in America ?"

[Perhaps some of our readers will favor us with the addresses of manufacturers of this particular kind of furniture.—The EDITOR.]

IS IT TRUE?

THE beggar who said, "Madam, I have been without food three days—yesterday, to-day and to-morrow," expressed a far-reaching human failing. There are many men in business and social life who mix up the past, present and future in just that same way. Through fretting and worry, yesterday, to-day and to-morrow become so closely connected in thought with them, that the separation in time is practically obliterated.

To live many days in one is a sure way to escape success. Life is so arranged that each day in itself is a full circle, and if we crowd other days in upon it, we simply distort its symmetry. We never enlarge a day or increase its value by bringing yesterday and to-morrow into it. On the contrary, we greatly dwarf its possibilities for achievement.

Wrongfully used, through vain regrets and worry, the past and future are like two great forces bearing heavily towards each other. As they come closer together the space between them must necessarily lessen, until the present is crushed out entirely.

The present is the only supreme time in our lives, and it is jealous of that supremacy. It will not serve us well unless we give all our thought and action, all our work to it. Fretting and worry sap the energies, waste time and prevent progress. Living each day by itself is the only true working spirit.

Calm planning, "sitting down to count the cost," systematizing and arranging to meet the demads and needs of the future are all a part of the work of the present. They mold causes so as to produce right and successful effects. But worry is not forethought. Forethought fertilizes the present. Worry blights it.

Sorrow for past error and the desire to correct past mistakes are also part of the present's work. But fretting and repining are not sorrow. They do not produce action. They are purely passive, yet they are powerful in creating despair. A wholesome regard for the past sees in it only those things that enrich the present. Everything else should be kept in the background of life.

In the present we create our future and mend the past. But we can't do this successfully unless we occupy the present to its full capacity. Making the best use of to-day is the surest way to give yesterday and to-morrow their right relations to life.

Then don't repine; don't look back with a long face upon your yesterdays; don't dwell upon the might-have-beens.

Don't worry over the outcome of your work; don't crowd time and try to live to-morrow before the due course of hours has elapsed; don't sour to-day's milk with the fear of to-morrow's thunder; don't borrow trouble and care; don't be anxious.

Don't fret at circumstances and conditions; don't "fuss and stew"; don't be blue.

Emerson said, "He is only rich who owns the day." And to be thus rich is every man's privilege. Are you making the most of it? Do you own the day so that the hours of work and rest all adjust themselves to the best scheme of life; so that at the end of every twenty-four hours you can write a positive "Finis," and start out fair and fresh on the next with no vain regrets and no anxious forebodings?

Live one day at a time and live it well! —The Chameleon.

BEST PAINT SELLS BEST.

At the beginning of our business career the question of how to make the paint that sells best resolved itself into how to make the best paint. We recognized that a good article—the best that can be made—sold at a fair price, is the surest to succeed.

We have clung to this principle persistently. We will sacrifice nothing to quality. We seek to do only those things that can make our paints the best.

We watch every detail of our paint making with the most scrupulous care to see that nothing but the best enters into it. The ***best*** material, the ***best*** workmanship, the ***best*** machinery, the ***best*** methods are the only things that can pass our strict censorship. We reject everything that falls below our high standard.

Do you want the paint that sells best—to-day and every day? We make it.

ONE DAY AT A TIME.

How to reduce the cost of doing business is the great mercantile problem of the day. Some of the retailers are trying to get around it by forming combinations to reduce the purchase price of goods, but the limit to that sort of thing is soon reached. Some dealers don't know what "cost" really means. If they met it in the street they wouldn't recognize it. Verily, they are in a parlous state. — New York Merchants' Review.

GERMANY'S IRON RESOURCES.

Some interesting details have lately been published as to the character and extent of the resources for the production of iron and steel in Germany, according to Iron and Steel Trades Review. It appears that at a recent date there were 672 iron mines in the Empire, of which 486 were exclusively devoted to iron mining, while 32 others mined iron ores as an accessory product. At the same date there were 154 mines not in operation, of which 96 were in process of being opened out. Of the 101 works which produce pig iron, 58 produce that metal alone, while 51 others produce also finished iron or steel. There were in operation 1,208 foundries, of which 356 produce only castings, 107 are part of general metallurgical works, and 745 are connected with engineering or other establishments. There were 186 forges in operation—that is, works which did not produce cast metals—of which 56 were exclusively engaged in producing iron or steel by forging, 122 were connected with establishments that manufactured other forms of metal, and eight were attached to works that were not otherwise metallurgical. Of steel works, the total number in existence throughout the Empire was 163, of which 39 manufacture only steel, 111 manufacture other metallurgical products, and 14 form part of non-metallurgical works.

BUSINESS CHANGES.

DIFFICULTIES, ASSIGNMENTS, COMPROMISES.

A. J. TUPCOTTE, of Messrs. Bouchard & Turcotte, general merchants, etc., Magog, Que., has assigned to Lamarche & Benoit.

Samuel Black, general merchant, Nelson, B.C., is away.

H. A. Voyer, general merchant, Bic, Que., has assigned.

H. W. Benson, hardware dealer, Bridgetown, N.S., has assigned.

T. G. Clute, general merchant, Stirling, Ont., is offering 50c. on the dollar.

Mathewson & Glover, general merchants, Lyndhurst, Ont., have assigned to A. G. Austin.

Ross & Somerville, bicycle dealers, etc., Sarnia, Ont., have assigned to M. A. Saunders.

PARTNERSHIPS FORMED AND DISSOLVED.

Corbeil & Gagnon, coal and wood dealers, Montreal, have dissolved.

Eugene Riopel and Louis Vaillancourt have registered partnership as carriagemakers in Montreal.

Haley Bros. & Co., planing millers, etc., St. John, N.B., have dissolved, Robert G. Haley continuing.

Samson & Filion, hardware dealers, Quebec, have dissolved, and Joseph O. Samson has registered as sole proprietor under the old style.

Atherton Bros., harness dealers, Woodstock, N.B , have dissolved, Elbridge A. Atherton retiring and Walter C. Atherton admitted under the old style.

SALES MADE AND PENDING.

The stock, etc., of John A. Bishop, general merchant, Baldoon, Ont., has been sold.

The assets of Wm. Faust, general merchant, Montcalm, Que., are to be sold by auction.

Frank Lavin's sawmill at Salmo, B.C., has been sold by sheriff's sale to G. O. Buchanan.

T. E. Scott, harness dealer, McGregor, Man., has sold out to the Great West Saddle Co., Limited.

The assets of Bouchard & Turcotte, general merchants, Magog, Que., are to be sold on August 1.

The assets of G. W. Smith, electrical contractor, Point Gatineau, Que., are to be sold by tender on August 15.

CHANGES.

Geo. A. Howey is retiring from business as general merchant in Vanessa, Ont.

B. Schaffer, general merchant, St. George (Beauce), Que., has removed to Magog.

The Midway Trading Co., general merchants, Midway, B.C., has been incorporated.

Ernest Newkirk & Co., general merchants, Port Rowan, Ont., have been succeeded by J. L. Buck & Bro.

McMullin & Jordan are starting as hardware dealers in St. John, N.B.

Houle & Lortie have registered partnership as dealers in washing machines in Quebec.

The Hugman Window Shade Co., Granby, Que., are to be succeeded by The Granby Window Shade Co.

E. J. Brooks & Co., general merchants, Sintaluta, Man., have sold their hardware stock to McGee & Thompson.

FIRES.

R. D. Campbell, general merchant, Sydney, N.S., has been burned out.

Mrs. F. Morency, general merchant, St. Marc, Que., has suffered damage by fire; insured.

Joseph Wasdale, tinsmith, Winnipeg, has suffered damage by fire; loss reported at $100; insured.

ALWAYS MAKE A MEMORANDUM.

See to the little things and the little things will take care of themselves. The only way it is really possible to attend to little things properly, that is, if one desires to attend to them, is, not to trust to the memory in doing the work, no matter how good it may be.

A pad should be carried in the pocket; on this mark down whatever you may think of as soon as it occurs to you. One by one attend to the things recorded, and whenever something on the list has been attended to run a pencil through the memorandum.

The little pad and prompt and proper attention to the memoranda on them, will not only aid you in making things better, but will also rid you of many a troublesome hour.

Make use of the pad and this suggestion. You will find them to work well.—Alfred Meyer, in The Shoe Retailer.

IRON MINING AT MADOC, ONT.

Ore shipments continue from the Hematite Iron Mine, Madoc, Ont., operated by Sherk & Wallbridge, at the rate of about 50 tons per day. A new and powerful steam hoist was added to the plant of this mine last week, which will greatly facilitate work now that the shaft is steadily going down. Mr. Gan. Wallbridge is having the old Hematite shaft, on the west side of the road, pumped out and expects to find a permanent yield of ore underneath. There is an immense body of water in the shaft, and although pumping has been going on for three weeks less than half the water is yet out.

E. H. Sherk and Cam. Wallbridge are opening another iron property on lot 1, concession 11, of Marmora, and made their first shipment last week. The ore is a specular iron, and gives promise of being a paying mine. It will be hauled to Madoc for shipment.

Rhodes, Curry & Co., Dartmouth, N.S., have two buildings well under way at Waverley for the new company which has been formed for the manufacture of electrical apparatus, fuse, etc. There will be five buildings in all, and the industry will probably employ a large number of men. The prospects for Waverley's future are bright.

THE CANADA PAINT COMPANY'S, PICNIC.

THE seventh annual picnic of the employes of The Canada Paint Company, Limited, Montreal, was held at Otterburn Park, St. Hilaire, Quebec, last Saturday. About 500 merry people boarded the special Grand Trunk train at Bonaventure station at 8.30 a.m., accompanied by a first-class orchestra. The scene was an unusually animated one, and a large crowd was attracted to the station by the departure of the big excursion in a first-class vestibuled train with buffet car attached and all appointments up-to-date.

As in previous years, The Canada Paint Company, Limited, left the selection of the place of the excursion entirely to their attaches, who decided in favor of Otterburn Park, which is beautifully situated on the Richelieu River at the foot of the Belœil Mountain.

All the arrangements were carried out by an energetic committee, and the excursionists were accompanied by a number of invited guests as well as the chief officials and Montreal shareholders of the company.

Among the invited guests present were noticed several of Montreal's prominent business men, including Mr. Gustaf Gylling, the Norwegian Consul; Mr. George Drummond, of Drummond, McCall & Co.; Mr. Allan, of Messrs. Jack & Robertson, and Dr. Kyle, the company's physician. The services of the last-named were happily not required, as there were no accidents to mar the day's enjoyment.

At romantic St. Hilaire, special arrangements were made to contribute to the pleasure of the outing. To those desirous of ascending Belœil Mountain wagonettes were provided. Disciples of Izaak Walton found fishing tackle at hand. There were sports innumerable and, best of all, eatables and drinkables galore. One would imagine the paint trade anything but an unhealthy one had he seen the substantial dinner disappear. Cigars, sweetmeats, and bon bons were afterwards distributed in profusion, and the rugged profile of old Belœil never looked down upon a happier crowd. The recitation contest created endless amusement owing to the blunders made by the aspirants for stage honors.

After "Casey at the Bat" had been given, instead of

This life is but a fleeting show!

one bright youth got "mixed" somewhat and started:

This life is but a floating shoe!

Again, everyone knows the couplet,

He who fights and runs away,
Will live to fight some other day!

This was rendered more practically by young Roderick McGillicuddy, better known as Rory Mac, as follows:

He who paints and paints away,
May sell his house 'most any day!

At the dinner Neil MacInnes, the Scotch Bard from Lochaber, sang, "We are a' Cronies," to the great delight of the assembly, and hearty congratulations were tendered to Mr. Kyle and the executive committee for their untiring efforts to make the affair a success. The committee was as follows: Fred Thibeault, chairman; R. Mallette, M. Doyle, W. E. Corbet, Henry Hawkins, Jas. Marshall, J. Desmarteau, Paul Lamarche; John Kyle, Sec.-Treas.; Frank Bell, Ass. Sec.-Treas.

Starter.—Charles Little.

Judges.—Charles E. Felch, J. Campbell, F. Kearns, G. Gylling, W. Thibeault.

Floor Manager.—Frederick A Thibeault.

Yeoman of the Guard.—John Thompson.

Interpreter.—Napoleon Maximilian Dansereau.

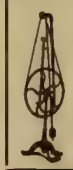
Umpire of Baseball Match.— "Elephant" vs. "Prism," Mr. William H. Evans.

The programme of athletic sports consisted of 18 events, but want of space precludes our publishing it.

In the evening the return journey was made without mishap, the trip being enlivened by the singing of the William Street Tonic Sol Fa Philharmonic Society, and, as the special train rolled into the Grand Trunk pessenger depot at Montreal, 500 voices sang lustily "Auld Lang Syne," and after the band played "Vive La Canadienne!" the merrymakers scattered to all parts of the city.

PRODUCTION OF PIG IRON IN THE UNITED STATES.

The bulletin of the American Iron and Steel Association has received from the manufacturers complete statistics of the production of all kinds of pig iron in the United States in the first half of 1899. The total production of pig iron in that period was 6,289,167 gross tons, against 5,869,703 tons in the first half of 1898, and 5,904,231 tons in the second half. The production of Bessemer pig iron was 3,788,907 gross tons, against 3,703,584 tons in the first half of 1898 and 3,633,800 tons in the second half.



The production of basic pig iron, all made with coke or mixed anthracite coal and coke as fuel, was 465,957 gross tons, against 337,485 tons in the first half of 1898 and 447,959 tons in the second half. The production of spiegeleisen and ferromanganese was 104,496 gross tons, against 109,641 tons in the first half of 1898 and 104,128 tons in the second half. The production of charcoal pig iron was 128,485 gross tons, against 147,003 tons in the first half of 1898 and 149,747 tons in the second half.

CAST IRON HOLLOWWARE IN CANADA.

THE following, which explains itself, appeared in a recent issue of Ironmonger, London, Eng.:

SIR,—I desire to add a word to my remarks about the cast iron hollowware trade in Canada, and to reply to the letter by Mr. C. F. Clark on the subject, on page 20 of your last issue of April 1 last. I quote the following remarks of Mr. Clark :

Your special commissioner who had visited Canada, in drawing his comparison between the weight of the American-made tinned round pots and those made by Law & Co., appears to have overlooked the fact that the American measure of capacity is our old wine measure, whilst the British-made articles are imperial measure—that is to say, a five-gallon imperial measure is equal to the American six-gallon.

It is true that the American measure of capacity is 20 per cent. less than the British, but the capacity of American hollowware exceeds the American standard so much that most of it holds more than the British of nominally the same size. Armed with a 40 fl. oz. (the imperial quart) graduated measure, such as is in use in any drug store, I invaded the premises of a Montreal hardware dealer, had a quantity of American hollowware conveyed to the nearest watertap, and put the capacity to the test. I have also had the same size (nominally) of Law's make measured by a druggist friend, and here is a comparison. American hollowware is denoted by capacity only, not by number, but I give the corresponding numbers used by the British trade.

Nos.	4	5	6	7	8	9	10
Nominal capacity in pints.	3	4	6	8	10	12	24
Actual sizes of American hollowware in fl. oz	71	85	128	160	205	234	417
Actual sizes of Law's hollowware in fl. oz.....	60	80	120	160	200	240	480

It will be seen, from No. 8 down, American hollowware is of greater capacity than British, and that from No. 9 up the reverse prevails. This seems strange in the face of American capacity standards, and I state it as a fact without any attempt at arriving at the reasons of the anomaly.

Mr Clark proceeds :

The British manufacturers have no means of recouping themselves for any loss on exports by getting much better prices from their home trade as the United States manufacturers do with their high protective tariff.

In the case of hollowware the much talked of "dumping" policy on the part of American manufacturers does not exist, because the market for tinned cast iron hollowware in the United States is dead. In no American city, from New York to Chicago, could I find that the ordinary vendor of hollowware carried stock of cast iron saucepans or round pots. Very few American makers produce these goods, and those who do make them almost exclusively for Canada. When I made my calculations in discounts, and stated that our manufacturers would require to allow 60 per cent. and 7½ per cent., the American discount stood at 70 per cent. and 10 per cent. off list at works in Pennsylvania, with a special rebate of 5 per cent. for carload lots and 2 per cent. additional for cash. Latest advices showed that the 70 per cent. has been replaced by 65 per cent., with other details unaltered. The price is the same for United States or Canadian buyers. The recapture of the hollowware trade in Canada is, by reason of the American increase, not so difficult as it was six months ago, and various Canadian buyers have been hopeful that some concession in price would be forthcoming from Britain, as they are desirous of having our goods in preference to the Yankee article. The latest advance, however, seems to have killed these hopes at their birth. The only way in which Canada can be captured by our hollowware manufacturers is by excluding Canada from the field of operations of the rules regarding price governing the members of the Hollowware Association. I have been informed that at the formation of the association it was the desire of at least one prominent maker to do so, but that the majority, who had no stake in the Canadian trade, would have none of it. I suggest to the Hollowware Association that the present time is a fitting one for the reconsideration of this detail, as the Canadian trade, which is considerable, could be won back now at smaller sacrifice than would have been demanded a few months ago. No one in the Dominion at present manufactures tinned hollowware, and the enterprising individual who chooses to embark in the undertaking would have many advantages, including freight and a 30 per cent. duty in his favor, over the present sources of supply. The quality of the finished article is much inferior to ours, and could, therefore, be produced cheaper. Two pieces brought over the Atlantic lie at 42 Cannon street for the inspection of anyone interested in the subject.

In maslin kettles, which have a fair sale —and which are only sold enameled—we are so far out that I did not enter into figures. I saw, a few days ago, some made by a well-known English house, in a Montreal store, where they have lain for some years. I was informed by the proprietor that the people in Canada die too soon to use them. He explained the enigma by stating that when a woman in middle life put one on the fire she was grey-haired before it boiled. He had offered these at 25 per cent. under American price to clear, yet no one would have them.

Yours truly,

"YOUR CANADIAN COMMISSIONER."

London, July 13.

A ROUGH RIDER.

Charles G. Kilpatrick, the clever one-legged trick and fancy cyclist, is now at the Point of Pines, where his riding act is proving a sensational hit. "Kil" claims to be the roughest rider of them all, and his "Rough Rider" costume, in addition to his daring exhibition of riding the steps, proves a big attraction to the thousands of pleasure seekers at this delightful resort. Kilpatrick's exhibition will be one of the features of the coming L.A.W. meet in Boston, where it will be held at the Point of Pines in Boston.

CATALOGUES, BOOKLETS, ETC.

AN EFFECTIVE FOLDER.

The McClary Manufacturing Co., London, Ont., have issued a folder describing their "Queen of the Kitchen" kettle, which should be an effective agent in increasing the sale of the kettle. The folder shows in a dozen photographs the great convenience and utility of this kettle. Every hardware dealer who handles these kettles, and, it is presumed they all do, should secure a supply of these folders for counter use.

PERSONAL MENTION.

Mr. A. Manson, manager for Henderson & Potts, Montreal, has been confined to his home at Lachine for two weeks through illness.

Mr. Albert D. Kennelly, manager of the Toronto branch of The McClary Manufacturing Co., Limited, is taking a well-earned holiday.

Cinnamon & Everson, hardware merchants, who purchased Wm. Bingham's stock and, later on, a fine stock in Peterboro', Ont., have decided to become permanent residents in Lindsay, Ont., and will combine the two stocks there. The store is to be entirely remodeled, and will be made up-to-date in every particular for the handling of a large hardware and stove business.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

MONTREAL July 28, 1899.

HARDWARE.

THERE have been few changes in shelf hardware as compared with the previous week, but, with the cost of all raw material steadily appreciating in value, as noted elsewhere in the following reports, the tone is, naturally, very buoyant. Smooth steel wire is about the only line to show actual change, being marked up 15c. this week. Hay-baling wire is asked for, but other sorts are quiet. Wire and cut nails display considerable activity, and are very firm in regard to values. Buyers are anxious to order forward on horse nails, while horseshoes are quiet. Screws, bolts, nuts, and rivets continue to show a good movement. Cordage is firm, but quiet, and in building paper and cement business is of a moderate character, but satisfactory. Green wire cloth is quiet, simply because dealers cannot get supplies forward, and are almost bare of stock.

BARBED WIRE—While there has been an advance in the United States, no change is to report here, business ruling dull and prices steady at $3 f.o.b. Montreal.

SMOOTH STEEL WIRE—There is a good inquiry for hay-baling wire. Oiled and annealed also meet some inquiry, and prices are held 15c. firmer here in a jobbing way at $2.85.

FINE STEEL WIRE—In fair demand and steady at 20 per cent. discount.

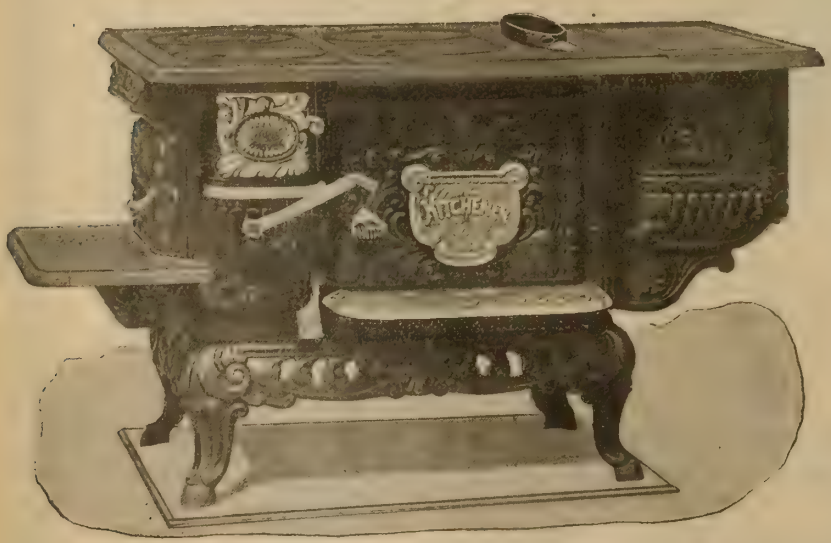
GALVANIZED WIRE — Trade is quiet, but prices are firmly held at $3 base.

BRASS AND COPPER WIRE — In fair demand and steady. Discounts are: 50 and 2½ per cent. on brass, and 45 and 10 per cent. on copper.

FENCE STAPLES — Good quantities of these are moving. We quote: $3.05 for bright and $3.65 for galvanized per keg of 100 lb.

FINE STAPLES—Steady and unchanged. Discounts are: Cooper, 55; poultry netting, 45, and electrician, broom, bed, etc., 40 per cent. off.

WIRE NAILS—A good sorting-up inquiry is noticed for these, and the mills also report repeat orders. Prices are firmly held at $2.70 base.



CUT NAILS — The local movement of these continues good, but there are less of them going to outside points. Prices are firm at $2.25 f.o.b. here.

HORSE NAILS—Traders generally appear to be anxions about future supplies of these, and a good demand is noted. Discounts are 50 per cent. on standard and 50 and 20 on Acadia.

HORSESHOES—There is a quiet trade noted in these. We quote as follows: Iron shoes, light and medium pattern, No. 2 and larger $3.50; No. 1 and smaller, $3.75; snow shoes, No. 2 and larger, $3.75; No. 1 and smaller, $4; X L steel shoes, new light pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; featherweight, all sizes, Nos. 0 to 4, $5.15; and toe weight steel shoes, all forward, all sizes $6.25 f.o.b. Montreal, St. John, N.B., and Halifax, N.S. Delivered f.o.b. in Toronto, Hamilton, London and Guelph 10c. per 100 lb. extra.

SCREWS — The movement in these is

maintained in fair volume. Discounts are as follows: Flat head, bright, 82½ and 5 per cent; round head do., 75 and 5; flat head, brass, 75 and 5; round head do., 67½ and 5.

BOLTS—There is a good inquiry for these. Discounts are: Carriage bolts, 5-16 and smaller, 55 per cent.; ⅜ and up, 50 per cent.; full square bolts, 65 per cent.; machine bolts, 55 per cent.; coach screw bolts, 67½ per cent., and sleighshoe bolts, 72½ per cent.

NUTS AND WASHERS — Demand fair for these. We quote: Square, 3¾c. and hexagon 4¼c. per lb.; discount off list. Washers in 50-lb. boxes are 50 per cent. discount.

RIVETS—There is a good business still moving in these. Discounts now are: Black and tinned, 45 per cent.; ditto burrs, 40 per cent.; copper rivets and burrs, 35 per cent.

CORDAGE — There is no change to report, but makers state that demand with them is unusually active for the season, and that values firmly maintain their position. We quote: Manila, 7-16 and up, 12c.; ⅜, 12½c., and ¼ and 5-16, 13c. Sisal, 10¾c. for 7-16 and up; 11¼c. for ⅜, and 11¾c. for ¼ and 5-16. Binder twine: Pure manila, 10½c.; 550 feet, 10c.; sisal, 500 feet, 9½c.

WRINGERS—There is fair trade in these and prices are unchanged at $48 to $60, according to brand, with 45 per cent. discount.

BUILDING PAPER—The movement in this material has been, if anything, brisker on city account, but country orders are decreased. Prices are unchanged.

GREEN WIRE CLOTH—Jobbers here are, in several instances, almost out of stock, and complain that it is impossible to hurry supplies from makers. Prices are firm at $1.75.

SPADES AND SHOVELS—There is a moderate trade noted in these. Discounts are unchanged.

HARVEST TOOLS—Inquiry fair since the advance, a good seasonable trade being noted.

SPORTING GOODS—Inquiry for these has been less brisk this week, but guns, ammunition, etc., are still moving out well.

CEMENT— The volume of business in cement is small for the season, only a few car lots to fill actual wants changing hands. Prices, however, are steady. We quote: Belgian, $1.90 to $2.10; English $2.30 to $2.40, and German, $2.45 to $2.65, per cask ex wharf.

FIREBRICKS—There is a steady demand for firebricks at firm prices. Round lots ex wharf are selling at $17 to $23 per 1,000, as to brand. The imports for the past week were 20,000, as against 83,900 for the pre-

vious week, making a total to date of 1,027,200.

METALS.

The advancing tendency is still prominent in nearly all kinds of metals, and the bulk of the changes we have to report this week are in an upward direction.

PIG IRON—This article is strong and excited, in sympathy with outside markets, where there appears to be no top to values. Quotations have been withdrawn on Hamilton pig, and it is impossible to get a firm offer on Scotch of any leading brand. Prices, therefore, are purely nominal.

BAR IRON—While some round lots are still obtainable on this market at $1.90, no new supplies can be laid down from the mills for less than $2, and we quote the basis firm at this figure.

BLACK SHEETS — Inquiry for these is active for forward delivery, and prices have been advanced all round. We quote: 8 and 16, $2.45; 18 and 20, $2.15; 22 and 24, $2.35; 26, $2.40, and 28, $2.45.

HOOP IRON—Is firmly held at $2.45.

STEEL—Firm. We quote: Sleighshoe and tire, $2.50; spring, $2.70; machinery, $3, and toe calk, $3.

GALVANIZED IRON —Inquiry for this line is brisk, but dealers are very conservative about orders for forward account owing to the uncertainty about supplies. We quote: Queen's Head, $4.55 to $4.80; Comet brand, $4.30 to $4.55, according to the size of the order.

INGOT COPPER — This has continued to advance outside, but though firm values on spot show no change from 19½ to 20c.

INGOT TIN — There appears to be no top at all to the price of this metal, and spot prices as a consequence of the sharp rise outside are 3c. up on the week, at 35c.

PIG LEAD — This also has exhibited a firmer disposition outside, but there is no change here from $4.25.

LEAD PIPE — Quiet and steady. We quote: Ordinary, 7c., and composition waste, 7½., with 20 per cent. discount.

IRON PIPE — Jobbers here still maintain values on this material at old figures though it would cost more to lay down fresh supplies. For instance, inch black pipe sold at $5.14 the other day, and no fresh supplies can be had under $5. We quote: Black pipe, ⅛ and ¼-inch, $3.12; ½-inch, $3.09; ¾-inch, $3.72; 1-inch, $5.14; 1¼-inch, $6.82; 1½-inch, $8.66, and 2-inch, $11.02. Galvanized pipe, ⅛ and ¼-inch, $5.64; ½-inch, $6.64; ¾-inch, $7.41; 1-inch, $10.12; 1¼-inch, $14.03; 1½-inch, $17.16, and 2-inch, $23.

TINPLATES—The expected advance in these has materialized as a result of the conditions specially noted last week, and prices are 25c. up. We quote as follows: Coke, I. C., $4.00; charcoal, I. C., Allaway or Comet brands, $4.25; do. I. X., $4.50; Lincoln, $4; P. D. Crown, $4.75; do. I. X., $5.50; Bradley's, $6.25.

CANADA PLATES — The same remarks apply to these, which are 5c. higher than they were. We quote: 52's, $2.30; 60's, $2.40; 75's, $2.50; full polished, $3.15; galvanized Canada plates, $4.25 for 52's.

TERNE PLATE—Continue firm and unchanged at $6.75 to $7.

COIL CHAIN — Fairly active and steady. We quote as follows: No. 6, 10¾c.; No. 5, 9¼c.; No. 4, 8¼c., and No. 3, 7¼c. per lb.; ¼-inch, $6; 5-16, $4.75; ⅜, $4.25; 7-16, $4.10; ½, $4; 9-16, $3.95; ⅝, $3.85; ¾, $3.65, and ⅞, $3.55 per 100 lb.

SHEET ZINC—This is somewhat easier at 7½ to 7¾c.

ANTIMONY—Steady at 10 to 11c.

SPELTER—Shows advance abroad, but is unchanged here at $7.

GLASS.

There is only a quiet business noted in glass, because, with deliveries backward, importers are not urging sales. We quote: First break, $1.90; second, $2 for 50 feet; first break, 100 feet, $3.60; second, $3.80; third, $4.25; fourth, $4.50; fifth, $5; sixth, $5.50, and seventh, $6.

PAINTS AND OILS.

This department of business has shown, if anything, more activity in a local sense during the week, as the weather has been more settled and favorable for outside operations. There are no changes in any line to report. We quote:

WHITE LEAD—Best brands, Government standard, $6.00; No. 1, $5.62½; No. 2, $5.25; No. 3, $4.87½.

DRY WHITE LEAD—$4.75 in casks; kegs, $5.

RED LEAD—Firm; casks, $4.75; in kegs, $4.50.

WHITE ZINC PAINT—Pure, 8c.; No. 1, 6½c.; in oil, pure, 9c.; No. 1, 7½c.

PUTTY —We quote: Bulk, $1.65; bladders, in bbls., $1.80; bladders, in cases, $1.95; in tins, $2.05 to $2.30.

LINSEED OIL — Raw, 57c.; boiled, 58c., five to nine-barrels, 1c. less, ten and twenty-barrel lots open, net cash, plus 2c. for 4 months. Delivered anywhere in Ontario between Montreal and Oshawa at 1c. per gallon advance and freight allowed.

TURPENTINE—One to four barrels, 63 to 64c., two to four-barrel lots, 1c. less, five barrels and over, open terms, the same terms as linseed oil.

MIXED PAINTS—Firm; $1 to $1.20 per gallon.

CASTOR OIL—Firm; 7½ to 8c.

SEAL OIL—35½ to 37½c.

COD OIL—35 to 37½c.

NAVAL STORES—Fair demand for all lines, and prices show no change: Resins,

COAL.

Dull and unchanged. We quote: Stove, $5.75; chestnut, $5.75; egg, $5.50; Scotch grate, $6; Scotch steam, $4 to $4.50; Tower ports steam, $3.50 to $3.75.

MONTREAL NOTES.

Ingot tin has made a big jump of 3c. to 35c.

Smooth steel wire is held 15c. dearer here than last week.

Tinplates are 25c. per box higher and point still upwards.

Black sheets of all kinds have been marked up 10c. on the week.

Canada plates, as expected, have advanced 5c. all around on last week.

ONTARIO MARKETS.

TORONTO, July 28, 1899.

HARDWARE.

THE wholesale hardware trade is gradually becoming quieter, although the volume of business is still better than is usual at this time of the year. For July, a larger business has been done than the trade anticipated. The week has not been a striking one, measured by some of the preceding ones. Still, there have been a few changes. The most important is, perhaps, in smooth steel wire, which has advanced 15c. per 100 lb. Brown's pipe tongs are 20 per cent. dearer. Split pulleys are from 10 to 15 per cent. higher. Curry combs of Canadian make have been advanced 10 per cent.

BARBED WIRE—There is not much doing, and prices are firm and unchanged. We quote $3.25 f.o.b. Toronto.

SMOOTH STEEL WIRE—The important feature about this line is the advance of 15c. per 100 lb. in the base price, the quotation now being $2.85 f.o.b. factory. A fair business is being done in both oiled and annealed and hay-baling wire.

GALVANIZED WIRE — There is not much doing. Prices are firm, and, while unchanged, it is the opinion that there will be an advance before a great while. We quote: Nos. 6, 7, 8 gauge $3.40; No. 9, $2.90; No. 10, $3.50; No. 11, $3.55; No. 12, $3.05; No. 13, $3.15; No. 14, $3.90; No. 15, $4.50; No. 16, $4.65.

WIRE NAILS—A fairly good sorting-up trade is being done. There has not yet been any change in prices, but negotiations are pending with that end in view. We quote $2.75 base f.o.b. Toronto.

CUT NAILS — There is quite a demand for small lots, but the volume of business does not amount to a great deal. We quote: $2.25 f.o.b. Toronto, Hamilton and London.

HORSE NAILS — A fair business is being done for future delivery. We quote: Standard, oval head, 50 per cent.; Acadia, countersunk head, 50 and 20 per cent.

HORSESHOES — Still but little doing. We quote as follows: f.o.b. Toronto, Hamilton, London and Guelph: No. 2 and larger, light, medium and heavy iron shoes, $3.60; snow shoes, $3.85; light steel shoes, $4.00; featherweight shoes, all sizes, $5.25. No. 1 and smaller, light, medium and heavy iron shoes, $3.85 per keg; iron snow shoes, $4.20; light steel shoes, $4.15; featherweight steel shoes, all sizes, $5.25.

SCREWS—Trade continues active and prices

Dodge

Standard Wood Split Pulleys

Live hardware houses keep our catalogue and discount sheet at hand, and display our handsome hanger.

Ours is the largest and most complete Pulley Works in the Dominion.

DODGE MANUFACTURING CO.

of Toronto, Limited **TORONTO, ONT.**

WORKS: Toronto Junction. CITY OFFICES: 74 York St.

unchanged. We quote: Flat head bright, 82½ and 5 per cent. off the list; round head bright, 75 and 5 per cent.; flat head brass, 75 and 5 per cent.; round head brass, 67½ and 5 per cent.; flat head bronze, 67½ and 5 per cent.; round head bronze, 62½ and 5 per cent.

BOLTS—A good seasonable trade at unchanged prices is still to be noted. We quote: Norway bolts, full square, 65 per cent.; common carriage bolts, 5-16 and under, 55 per cent.; ditto, ⅜ and larger, 50 per cent.; ditto, full square, 65 per cent.; machine bolts, all sizes, 55 per cent.; coach screws, 67½ per cent.; sleighshoe bolts, 72½ per cent.; blank bolts, 55 per cent.; bolt ends, 62½ per cent.; nuts, square, 3¾c.; nuts, hexagon, 4¼c.; tapping nuts, 60 per cent.; tire bolts, 60 and 10 per cent.; stove bolts, 60 and 10 per cent.

RIVETS AND BURRS — Business keeps steady. We quote as follows: Carriage section, wagon box rivets, etc. (steel), 60 per cent. off the list; ditto (Norway iron), 55 per cent.; black M rivets, (steel) 60 per cent.; ditto (Norway iron), 45 per cent.; iron burrs, 40 per cent.; copper rivets, 35 per cent.; bifurcated, with box, $1.25; coppered iron rivets and burrs, in 5-lb. carton boxes, 30c. per lb.

ROPE—The market is steady, in sympathy with the firmness of the primary hemp market. We quote as follows: Sisal, 7-16 in. and larger, 10½c. per lb.; ⅜ in., 11c.; ¼ and 5-16 in., 11½c. Manila, 7-16 in. and larger, 12c. per lb.; ⅜ in., 12½c.; ¼ and 5-16 in., 13c.; New Zealand, 9½c. per lb.; Deep sea line, 13½c. for water laid, and 14½c. for machine-made; hemp, 7 to 9c.; lath yarn, 8¾c. Clotheslines, 48 feet, 90c.; 60 feet, $1.20; 72 feet, $1.50; 100 feet, $2.

CHURNS — Business keeps fair. We quote: Metal frame—No. 0, $3; No. 1, $3.20; No. 2, $3.40; No. 3, $3.75; No. 4, $4.50; No. 5, $5.90. The price of wooden frames is 15c. per churn less than the above. Terms, 3 per cent. off 30 days f.o.b. Toronto.

WRINGERS—A seasonable trade is being done. We quote as follows: "Leader," $60 per doz.; "Royal Canadian," $58; "Royal American," $48. Prices are all f. o. b. Toronto, Hamilton, Brockville, and Montreal. Discount, 45 per cent. Terms, four months, or 3 per cent., 30 days.

BUILDING PAPER—A fair trade is still to be noted. We quote: Plain building, 28c. per roll; tarred lining, 35c., according to quality; tarred roofing felt, $1.40 per 100 lb.; carpet felt, $2.25 per 100 lb.

POULTRY NETTING AND WOVEN FENCING—The market keeps strong. In last week's issue it was stated that the price of woven fencing was 7½c. per rod to the retail trade. It should have read that the price had advanced 7½c. per rod. The discount on poultry netting is 40 per cent.

SPADES AND SHOVELS — Trade is quiet and the discount unchanged at 40 and 5 per cent.

HARVEST TOOLS, ETC.—The season is about over, but there is still a fair demand. Discount 60 and 5 to 60 and 10 per cent.

SPORTING GOODS—A fairly good trade for this time of the year is being done.

CEMENT—The consumption of Canadian Portland continues brisk. Imported cements are not offering in as large quantities as in past seasons. Prices are unaltered. We quote in barrel lots as follows: Canadian Portland, $2.65 to $2.90; English do., $3; German do., $3.10; Belgian do., $2.70; Canadian hydraulic cements, $1 to $1.10; calcined plaster, $1.90; asbestos cement, $2.50 per bbl.

METALS.

The metal market is still exceedingly strong, with the general tendency of prices upwards. Tin has advanced several cents per lb. during the past week. Pig iron and galvanized sheets are also marked higher.

PIG IRON — The market for Hamilton iron is reported by Adam Hope & Co. to be strong, with an active demand at $21 f.o.b. the furnace. "Altogether," they say, "the position is a very strong one, and it looks as if there will be a general scarcity of iron and higher prices before the end of the year."

BAR IRON—A good business is still being done and the base price is firm at $2.

BLACK SHEETS—The demand is fair, with prices firm and unchanged at the recent advance, 28 gauge still being quoted at $3.10.

GALVANIZED IRON—Quotations are 25c. higher, 28 gauge now being $5 per 100 lb. The demand is good, with stocks light.

COPPER—Ingot copper has been rather quiet the past week, but in sheets a good business is being done. Prices are firm and unchanged, ingot being quoted at 20 to 21c. per lb. and sheets at 23 to 23½c. per lb.

PIG TIN—There have been some extraordinary advances in the outside markets during the past week. In New York, on Wednesday, pig tin touched 32c., and our local quotations are up to 36c. per lb., although there are some houses which have not yet followed the latest turn in the outside markets.

TINPLATES — No further changes have been made in prices on the local market, but there have been further advances in Great Britain. Business locally is quiet.

CANADA PLATES—The demand is only moderate, but prices are firm and unchanged. We quote: All-dull, $2.75; half-polished, $2.85; all-bright, $3.20.

IRON PIPE—The demand continues active, and prices firm and unchanged. Quotations on black pipe are as follows: ¼ to ⅜ inch, $3.35; ½ inch, $3.40; ¾ inch, $4; 1 inch, $5.50; 1¼ inch, $7.35; 1½ inch, $9.25; 2 inch, $12.50; 2½ to 6 inch, discount off the list 45 per cent.

PERSONS addressing advertisers will kindly mention having seen their advertisement in Canadian Hardware and Metal Merchant.

CAUSES OF FAILURE

In the Hardware Trade and How Avoided.

As long as there are failures, subjects that furnish information how to prevent them will always be timely. We have published, in pamphlet form, three admirable papers on the above topic, in which Over-Stocking, Expense, Capital, Credit, Discounts, Buying, etc., etc., are ably discussed. We will mail the whole three essays to any address on receipt of **10 cents**

HARDWARE AND METAL, Toronto

Cornwall Canal.

NOTICE TO CONTRACTORS.

SEALED TENDERS, addressed to the undersigned and endorsed Tender for "Guide Ways at Guard Gates," will be received at this office until sixteen o'clock on the 4th August, 1899, for the construction of Guide Cribs and Ways at the Guard Lock.

Plans and specifications of the work can be seen on and after the 28th July, 1899, at the office of the Superintending Engineer, Cornwall, where forms of tender can be obtained.

In the case of firms, there must be attached the actual signatures of the full name, the nature of the occupation and place of residence of each member of the same, and further, an accepted bank cheque, for the sum of $250.00 must accompany the tender. This accepted cheque must be endorsed over to the Minister of Railways and Canals; and will be forfeited if the party tendering declines entering into contract for the work, at the rates and on the terms stated in offer submitted. The accepted cheque thus sent in will be returned to the respective parties whose tenders are not accepted.

This Department does not, however, bind itself to accept the lowest or any tender.

By order,

L. K. JONES,

Dept. Railways and Canals, Secretary.
Ottawa, 24th July, 1899.

Newspapers inserting this advertisement without authority from the Department, will not be paid for it.

Galvanized pipe is quoted as follows : ½ inch, $6.50 ; ¾ inch, $8 ; 1 inch, $11; 1¼ inch, $15.25; 1½ inch, $19 ; 2 inch, $27.

PIG LEAD — The demand is fair and prices unchanged at last week's advance. We quote : 4½ to 4¾c. per lb.

LEAD PIPE—Business is good. We quote: Ordinary pipe, 7c. ; waste, 7½c. Discount, 20 per cent.

RANGE BOILERS — The demand keeps good with prices firm and unchanged. We quote: Galvanized, 30 gals., $9; 35 gal., $10; 40 gal., $11. Copper, 30 gal., $22 ; 35 gal., $26 ; 40 gal., $30; discount off copper boilers, 10 per cent.

SHEET ZINC—Trade is fair at 8¼ to 8½c. for cask and smaller quantities respectively.

SPELTER—There is not much doing. We quote 7½ to 7¾c. per lb.

SOLDER—Trade is good. We quote : 20 to 21c. for half-and-half ; 19 to 20c. for refined, and 17 to 18c. for wiping.

ANTIMONY — Trade is quiet and featureless at 11 to 11½c. for Cookson's.

SOIL PIPE—Trade is fair. Discount, 50 and 10 per cent.

GLASS.

There is a moderate demand from stock. No import arrivals are reported. Prices are firm, both locally and in the primary market. We quote : Star, first break in 50-foot boxes, $2, and in 100-foot boxes, $3.75 ; double diamond under 25 united inches, $6, Toronto Hamilton and London ; terms 4 months or 3 per cent. 30 days.

PAINTS AND OILS.

Business is dull. The market is steady, prices showing practically no difference from last week. We quote :

WHITE LEAD—Ex Toronto, pure white lead, $6.12½; No. 1, $5.75; No 2, $5.37½; No. 3, $5 ; No. 4, $4.62½ ; dry white lead in casks, $5.10.

RED LEAD—Genuine, in casks of 560 lb., $4.90 to $5 ; ditto, in kegs of 100 lb., $5.15 to $5.50; No. 1, in casks of 560 lb., $4.75 ; ditto, kegs of 100 lb., $5.

LITHARGE AND ORANGE MINERAL—Litharge, 6 to 6½c. ; orange mineral, 7½ to 8½c.

WHITE ZINC—Genuine, French V.M., in casks, $7 to $7.25 ; Lehigh, in casks, $6.

PARIS WHITE—90c.

WHITING — 55c. per 100 lb.; Gilders' whiting, 85c.

GUM SHELLAC—In cases, 24c.

PLASTER PARIS — Ordinary, $1.75 per barrel ; New Brunswick, $2 to $2.20 per barrel.

PUMICE STONE—Powdered, $2.50 per cwt. in barrels, and 4 to 5c. per lb. in less quantity ; lump, 10c. in small lots, and 8c. in barrels.

LIQUID PAINTS—Pure, $1 per gallon; No. 1 quality, 90c. per gallon.

SEAL OIL—59 to 60c. per gallon, and yellow seal at 49 to 50c.

CASTOR OIL—East India, in cases, 9c. per lb. and 10c. for single tins.

LINSEED OIL — Outside western points (freight allowed) : Raw, 1 to 4 barrels, 57c.; boiled, 1 to 4 barrels, 60c. Prices in Toronto, Hamilton, London, are 1c. per gallon less.

TURPENTINE — Outside western points, freight allowed, 1 to 4 barrels, 65c.; in less quantities than barrels, 5c. per gallon extra will be added and packages charged for. Prices in Toronto, Hamilton, and London are 1c. less than the above. Terms, net 30 days.

HIDES, SKINS AND WOOL.

HIDES Deliveries continue large. Prices are steady, but unchanged. We quote cowhides : No. 1, 8¼c.; No. 2, 7¼c.; No. 3, 6¼c. Steer hides are worth ½c. more. Cured hides are worth 9c.

SKINS—There is no change. Prices are steady. We quote as follows : No. 1 veal, 8-lb. and up, 9c. per lb.; No. 2, 7c. ; dekins, from 30 to 35c. ; culls, 15 to 20c. Sheepskins are worth 90c. to $1, and lambskins, 30c.

WOOL — There is an improvement in deliveries, caused by the advance of ½ to 1c. in fleece wool. We quote fleece at 14 to 14¼c., and unwashed at 8 to 9c.

OLD MATERIAL.

There is an excellent demand. Prices are unchanged throughout. We quote as follows : Agricultural scrap, 55c. per cwt.; machinery cast, 60c. per cwt. ; stove cast scrap, 45c.; No 1 wrought scrap, 55c. per 100 lb.; new light scrap copper, 12½c. per lb.; bottoms, 11c. ; heavy copper, 15c.; light scrap brass, 7½c.; heavy yellow scrap brass, 10c.; heavy red scrap brass, 11c.; scrap lead, 2½c.; zinc, 3c ; scrap rubber, 4c.; good country mixed rags, 65 to 75c.; clean dry bones, 45 to 50c per 100 lb.

PETROLEUM.

There is no change in prices, but a small improvement in the demand is noted. We quote in barrels, Toronto, as follows : Canadian, 14c. ; Sarnia prime white, 14c.; Sarnia water white, 15c. ; photogene, 15½c. ; American water white, 16½c. ; Pratt's astral, 18c.

COAL.

The demand continues brisk. Prices are firm, but unaltered. We quote as follows : Anthracite for July delivery at Buffalo and bridges : Egg, stove and nut, $4.50 per gross ton, or $4.01 per net ton ; grate, $4.25 per gross ton or $3.79 per net ton.

MARKET NOTES.

Pig tin is now quoted as high as 36c. per lb.

Brown's pipe tongs have been advanced 20 per cent.

Curry combs of Canadian make are 10 per cent. dearer.

The base price of smooth steel wire has been advanced to $2.85 per 100 lb.

Skate straps will be higher next season prices having been advanced 20 per cent.

Rice Lewis & Son, Limited, are showing a line of megaphones of various sizes. Hardware men who are near summer resorts should experience a good demand for them.

ALABAMA'S PIG IRON OUTPUT.

The total of pig iron shipments from Alabama and Tennessee furnaces during June was slightly over 150,000 tons, which is 12,000 tons in excess of any previous month's business. Of this amount, the Birmingham district furnished over 90,000 tons. In the same month, 14,000 tons of pig iron were exported, practically all of this coming from Birmingham.

The field shipped 15,000 tons of cast iron pipe last month, the Birmingham district furnishing over 6,000 tons of this amount. Of this 150 tons were exported.

Total movements of pig iron from Alabama and Tennessee furnaces, 757,796 tons, an increase over the same period last year of 137,698 tons or 22 per cent. Total movements of pig iron from the Birmingham district alone, 451,019 tons, an increase over same period last year of 68,031 tons or 18 per cent.—American Manufacturer.

CANADIAN PRODUCTS WANTED.

The following inquiries were received at the High Commissioner's office, London, Eng., recently for Canadian products :

A firm in London, who do a large business in all kinds of fruit pulps, canned goods, etc., desire to have the names of Canadian exporters of the first-named class of goods.

An inquiry has been received for the names of hosiery manufacturers who have hosiery waste to dispose of.

The addresses of Canadian exporters of evaporated fruit rings are asked for.

[Information in regard to any of the above, sent to HARDWARE AND METAL will be forwarded to destination.—THE EDITOR.]

BARGAINS IN BICYCLE TIRES.

Rice, Lewis & Son, Limited, have bought a consignment of bicycle tires which were made in excess of an order given by one of the tire companies. By having the original name on the tires buffed off, Rice, Lewis & Son, Limited, are enabled to offer them at 25 to 30 per cent. less than the same tires could have been sold at had the original name been allowed to remain upon them.

PIG IRON FAMINE.

A despatch from Cleveland reads : "The pig iron famine that was predicted several weeks ago appears to have materialized. The brokers in this city say the dealers are not trying to sell iron for shipment before January 1, next, and none is to be had for shipment sooner than September 1. There will be a long period at the end of the year, it is predicted, when there will be nothing but contract iron. A large percentage of the manufacturers, the per cent. being placed as high as 40, are depending entirely upon wild iron, and it is said that most of these will have to close down. About a week ago a manufacturer gave a broker in this city an order for 1,500 tons of iron, but the broker has been unable to get it."

A recent issue of The Canadian Mining Gazette, Toronto, notes that development work has been going on steadily at the Belmont iron mine in which T. D. Ledyard, of Toronto, and others are interested. An experimental shipment of 100 tons has been made to Glasgow, and it is stated that an inquiry for 20,000 tons was received recently from Germany. Samples from Nichol Pit showed 65 per cent. iron, .013 in phosphorus, and 0.10 in sulphur. Samples analyzed by W. J. Rattle showed 64.88 per cent. metallic iron, .003 phosphorus, 5.11 silica and no sulphur.

We Want Your Axe Order FOR FALL SHIPMENT.

Kindly hold it till our representatives call on you.

RIGID, DURABLE, ECONOMICAL.

Actual tests made proove that **Hayes' Patent Steel Lathing** requires 60 per cent. less mortar than lower-priced kinds.

It is easily applied—clinches and holds the mortar firmly—is fire, water, and vermin proof, and not only makes a better, quicker job, but costs less in the end.

Used in the best buildings by practical far-seeing builders.

TRADE CHAT.

STIRRETT & CO., general merchants, Petrolia, Ont., have announced that they will close their store early in August, and are now selling out.

Strathroy, Ont., is offering inducements to manufacturers to settle in that town.

T. & W. Millar, hardware dealers, Portage la Prairie, Man., intend erecting a large business block in that town.

The Gurney-Tilden Co., Limited, and D. Moore & Co., Limited, Hamilton, have given their stove-moulders a 10 per cent. increase in their wages.

Most of the gold brought down in two steamers from the Klondyke to Victoria, B.C., was consigned to Canadian banks. The amount brought down was estimated at between $2,500,000 and $3,500,000.

A despatch from Philadelphia states that the demand for iron and manganese ores is so great that shipments are being received from British India, the Black Sea and Mediterranean districts, Rio Janiero and Newfoundland. From the last mentioned point, 1,000 tons of ore have already been shipped.

H. J. Walker & Son have sold their hardware business in Warkworth, Ont., to Boyce Bros., who will continue the business.

The Northern Elevator Co., The Manitoba Elevator Co., and Bready, Love & Tryon, elevator owners in Manitoba and the Northwest, have formed a combine to reduce the cost of handling grain, and prevent needless duplication of elevators.

The U. S. Geological Survey's report places the production of copper in the United States during 1898 at 526,375,591 lb., which is much the greatest production ever recorded. The State of Arizona made the greatest advance in production.

The establishment of large smelting works and rolling mills at Sydney, Cape Breton, is bound to boom that town. The first evidence of this is reported by a correspondent who writes that miners to the number of 5,000 have arrived or are expected in that town in a few days.

The Waterous Engine Works Co., Limited, The Massey-Harris Co., Limited, and The Cockshutt Plow Co., Brantford, Ont., the firms whose properties are situated on the banks of the Grand river, which has done much damage by floods, have offered the Brantford council $2,500 as their share of flood prevention work.

FACTORY LOCATION WANTED.

W. M. Purdy, 45 City Councillors street, Montreal, is advertising for a location for a factory, within 100 miles of Montreal, employing 200 to 300 hands. This is understood to be for a canning company and that a municipal bonus is wanted.

CANADA'S GREATEST FAIR.

This year will mark the coming of age of Canada's Great Fair and Industrial Exposition, which will be held in Toronto from August 28 to September 9. It is just 21 years since Toronto Exhibition was established as an annual institution under the present management. During that time it has increased five fold in every direction, and to-day can fairly lay claim to have assumed a national character. Last year upwards of 300,000 people attended, and this year such arrangements are being made as will warrant the expectation of a still larger attendance. Many entirely new features will be presented, while the exhibits, with an increased amount given in prizes (totaling $35,000), will undoubtedly crowd the 600,000 dollars' worth of buildings to their utmost. The usual brilliant military spectacles will be given, illustrating recent famous feats of arms on land and sea by both England and America, and arrangements have been made for an illustration of wireless telegraphy, wireless telephoning and the improved X rays. In short, the Exhibition will be more than ever up-to date.

NEW INVENTIONS.

The following inventors have recently been granted patents by the Canadian Government through the agency of Marion & Marion, New York Life building, Montreal: 63353, Emery Coulon, Blaton, Belgium, manufacture of artificial stone; 63348, Sauveur Turcotte, Ste. Agathe de Lotbiniere, P.Q., acetylene gas generator; 63390, Alex. Krefting, Christiana, Norway, manufacture of organic products from seaweeds; 63384, Auguste Wartenwoiler et al. Engwang, Switzerland, automatic apparatus for production of acetylene gas; 63385, Joseph Alfred Plante, Quebec, P.Q., acetylene gas generator; 63409, George Adams, Franklin Centre, P.Q., combined needle and thread holder.

A CUTLERYMAN'S TRIP WEST.

Mr. A. H. Symonds, representing George Butler & Co., Limited, Trinity cutlery works, Sheffield, and other English and American manufacturers, last week returned from the Northwest and British Columbia.

"I am well satisfied," he said in reply to a question from HARDWARE AND METAL. "with my trip, for I did much better than even I expected."

Mr. Symonds has not been through to the Coast for several years, and he is much impressed with the improvements which have taken place since his previous visit.

He leaves for the Maritime Provinces on August 1.

SEALED TENDERS addressed to the undersigned and endorsed "Tender for Supplying Coal for the Dominion Buildings," will be received at this office until Friday, 4th August, next, for the supply of Coal for the Buildings throughout the Dominion.

Specifications can be seen and forms of tender obtained at this office, where all necessary information can be had on application.

Persons tendering are notified that tenders wil not be considered unless made on the printed form supplied, and signed with their actual signatures.

Each tender must be accompanied by an accepted bank cheque, made payable to the order of the Honorable the Minister of Public Works, equal to ten per cent. of amount of tender, which will be forfeited if the party decline to enter into a contract when called upon to do so, or if he fail to complete the work contracted for. If the tender be not accepted, the cheque will be returned.

The Department does not bind itself to accept the lowest or any tender.

By order,
E. F. E. ROY,
Secretary.

How to Make a Hot-water Heater

out of an ordinary stove or furnace.

The accompanying cut shows the Patent Bigley Water Heater, made in 7 sizes, from 12 to 28 inches in diameter. Manufactured from cast iron, and put together with wrought iron nipples. Tested to 150 lbs. pressure. It does not interfere with the heating capacity of a stove or furnace, but adds 50 per cent. to it. Saves one-third in fuel.

Capacities Guaranteed.

Send for Catalogue.

HEATING AND PLUMBING

PLUMBING AND HEATING CONTRACTS.

THE Bennett & Wright Co., Limited, Toronto, have the contract for heating and ventilating the new offices for The Consumers' Gas Company on Toronto street, and for heating and plumbing in a large mushroom house for Harry Webb, Toronto.

J. Lamarche, Montreal, has a contract for the roofing, plumbing and heating of a church at St. Anne Deplante.

J. H. Hughes, Montreal, has the contract for plumbing and heating six houses, corner of Aylmer and Berthelet streets.

Denman & Bethune, Montreal, have just finished the roofing and plumbing of the Church of the Holiness Movement on Bluery street.

Marier & David, Montreal, have a contract for plumbing and heating a house on St. Vincent street; also the repairs at the civic hospital.

Ogilvy Bros., Montreal, have the following contracts under way: Heating a house for Mrs. Newman and heating for J. A. Mathewson & Co.'s store on McGill street.

Blouin, Delforse & Latourelle, Montreal, have the following contracts: Heating stores on Notre Dame street for Congregation of Notre Dame; plumbing of four tenements City Hall avenue; heating Fogarty's and Dupuis Freres' stores on St. Catherine street.

Purdy, Mansell & Co., Toronto, have contracts for heating four residences at Macdonald avenue and one residence on Marion street, for The York County Loan and Savings Co., and for plumbing, heating and gas-fitting in a large residence on Huron street and Lowther avenue for C. A. Dinnock.

TENDERS ASKED FOR.

Tenders are asked for plumbing and heating Parent's hotel on Frontenac street, Montreal; also for heating churches at Stottville and St. Julie.

TORONTO MASTER PLUMBERS MEET.

The regular monthly meeting of The Toronto Master Plumbers' Association was held on Monday evening. The president, James H. Wilson, occupied the chair.

As this was the first meeting of the association since the Ottawa convention, the delegates' report was presented by J. H. Wilson.

The agreement with the Journeymen Plumbers' Union which was made by the committee appointed at the last meeting was ratified. It was decided that this agreement should be typewritten, and a copy sent to every master plumber in Toronto.

DIRECT HOT-WATER RADIATORS.

The most convenient form of heating surface for direct heating is the cast iron radiator. These are now made in such a variety of styles and designs, by reputable manufacturers, that one can easily suit his own or his customer's taste.

Wrought iron pipe coils make very effective heating surface and can be used to advantage where the pipes have a long run. Wall circulation is the best form of pipe coils.

Direct radiators, when tapped as follows for flow and return pipes, have uniformly given good results:

0 to 75 square feet, tapped ¾ inch, first floor.
75 to 50 square feet, tapped 1 inch, first floor.
50 to 100 square feet, tapped 1¼ inch, first floor.
100 and over square feet, tapped 1½ inch, first floor.
0 to 70 square feet, tapped ¾ inch, second floor.
70 to 70 square feet tapped 1 inch, second floor.
70 to 125 square feet tapped 1¼ inch, second floor
125 and over square feet, tapped 1½ inch, second floor.

To determine the amount of radiating surface necessary to easily warm a building in all weather, and to so proportion it that each room will have the required temperature at the same time, calls for the best judgment of the engineer. The correct solution of this problem must depend largely upon the experience of the fitter, for no rule or formula can be applicable in all cases.

If the building has an average wall and glass exposure, the amount of surface can be determined by the use of the following ratios:

TABLE OF RATIOS

	1 sq. ft. of radiating surface will heat
Dwellings—	
Living rooms, one side exposed	30 cubic ft.
Living rooms, two sides exposed	28 cubic ft.
Living rooms, three sides exposed	25 cubic ft.
Sleeping room	From 30 to 40 cubic ft.
Hall room	From 20 to 3 cubic ft.
Bath room	From 20 to 30 cubic ft.
Public Buildings—	
School room	From 30 to 50 cubic ft.
Offices	From 30 to 50 cubic ft.
Factories	From 50 to 70 cubic ft.
Stores	From 50 to 70 cubic ft.
Auditoriums	From 80 to 100 cubic ft.
Churches	From 80 to 10 cubic ft.

The above ratios are for direct heating, and an average temperature of 160 degrees Fahrenheit in the water.

If the direct radiators are used, allow not less than 50 per cent. more surface, and for direct-indirect 25 per cent. more.—National Builder.

TORONTO BUILDING PERMITS.

Building permits have been issued in Toronto to F. B. Poucher, for a pair of semi-detached brick residences on Parliament street, near Duke, to cost $8,000; to Joseph Simpson & Sons, for a five-storey addition to a knitting factory at 8 Berkeley street, to cost $5,500; to Marshall Coates, for four two-storey and attic brick residences at the corner of Spadina avenue and Camden street, to cost $6,000; to the York County Loan and Savings Co., for a two-storey and attic brick and stone residence on Marion street, to cost $1,800.

PLUMBING AND HEATING NOTES.

Plans are being prepared for a new hotel at St. Agathe.

L. Girard & Co., plumbers, Mile End, Que., have dissolved.

F. C. Hunt, plumber, London, has suffered damage by fire.

The bailiff is in possession of John Corneil's plumbing business in Ottawa, for rent.

Emma L'Henreux, wife of Lucien Girard, has registered as proprietress of L. Girard, jr. & Co., Montreal.

The annual picnic of the Montreal Plumbers' Association will be held on August 26 at Otterburn Park.

The Board of Education of Owen Sound, Ont., have been authorized to issue a by-law for an $18,000 high school.

HE RIDES AN IVER JOHNSON.

The Iver Johnson's Arms and Cycle Works, of Fitchburg, Mass., secured a good advertisement on July 4, when The American Biograph Company biographed Kilpatrick, the one-legged cyclist, in his sensational step-riding act before 20,000 people at the Point of Pines, Boston. This daring rider uses the Iver Johnson bicycle in all his work, and, as these pictures will be shown at all the Keith theatres, with their famous biograph machines, thousands of people will gain an idea of the great strength of the wheel subjected to the terrible strain of this ride.

The imports into Brantford, Ont., for the year ending June 30 were $1,262,188 as compared with $1,140,163, showing an increase of $122,025 in the year. The exports for the past year were $1,014,885 as compared with $1,017,597 in the year previous, a decrease of $2,712.

SEND for specimen copy of Phillips' Monthly Machinery Register, containing over 5,000 entries of new and second-hand machinery of every description. The oldest established and most successful medium in the world. Established 25 years for the purpose of introducing those who have machinery for sale, to those who wish to buy, has a circulation of about 50,000 copies per annum, all over the world, and is used for continual reference by a large number of firms. It is consequently a most valuable advertising medium for all engineers and manufacturers. Subscription 6s. per annum, price per copy, 6d. Sole Proprietor, CHAS. D. MORE MISSING LETTERS.

Being up in town recently on a flying visit, I saw, over the shop of a West-end ironmonger, a puzzling inscription, which read thus:

SHIN IRONMONGER

L K MIT BELLHANGER

I at first thought it was meant to indicate two names, but, not feeling certain, retired to the edge of the pavement to get a better view of the establishment, whereupon I discovered over the door a third name, and, ultimately, the clue to the conundrum.

As your readers may have guessed by this time, the mysterious words are merely parts of such ordinary inscriptions as:

Furnishing ironmonger,
Locksmith, bellhanger.

But the way in which the letters had dropped off certainly gave to the casual passer-by the impression that the establishment was owned by a firm of two partners. I may be accused, perhaps, of making too much of this hiatus eyesore, but it is really a more important matter than some tradesmen appear to think. Why ironmongers, of all persons in the world, should be the most careless in this particular respect puzzles me exceedingly.—Correspondent in Ironmonger.

COAL SHIPMENTS FROM FERNIE.

The shipments of coal and coke from Fernie in the month of June were about the same as during May, viz., 10,000 tons of coal, and 2,000 tons of coke. The demand for coal in the East is somewhat less, in consequence of the warm weather. In fact, this remark applies generally to the domestic trade; but shipments of steam coal are on the increase, and, of course, the demand for coke is in excess of present production. It is also gratifying to find that this coal is increasing in favor for blacksmith purposes, and is rapidly displacing the Pennsylvania coal.

Development work at both the mines and coke ovens is going on at a great pace. The 10-foot seam which was bored into a fortnight ago will be reached by a tunnel about the middle of next month, and shipments therefrom will follow shortly afterwards. The progress at the coke ovens has been rapid, and it now seems certain that the full number required can be built this season, viz., 250, making a total of 300. It is well to have an object in view, and the shipment of 1,000 tons per day of coal from the mines this fall, and 400 tons of coke per day from the ovens, is certainly a good mark, and there is no doubt it will be reached.—Fernie Free Press.

The "SAFETY"

ACETYLENE GAS MACHINE

manufactured by

The Safety Light & Heat Co.

DUNDAS, ONT.

What some of our friends say of us :

Dear Sirs,—The 10-light Safety Acetylene Gas Machine purchased from your Mr. Sparling has been in use in the office, composing and press rooms of the Vernon News since the beginning of the year, and it is giving excellent satisfaction. The light is clear, strong and much easier on the eyes than other forms of artificial light, and is admirably adapted for our purpose. The machine is easily operated and requires little attention. The automatic device for removing the ash from the carbide works to perfection. We find that there is no overgeneration of gas and consequently no waste. The ash is always dry when removed. Considering the volume of light we find it more economical than coal oil, and we can confidently recommend the Safety generator as a very excellent machine.

AN INTERESTING CASE.

Bank of Hamilton vs. Imperial Bank of Canada.—Judgment in action tried without a jury at Toronto. Action to recover from defendants $495 paid by plaintiff to defendants under the following circumstances: One Carl Bauer had an account with the Bank of Hamilton in Toronto, and, on January 25, 1897, there was to his credit the sum of $10.23. He drew a cheque for $5 and had it marked good at the bank. He drew it in such a way that there was room to fill in other words and figures in the cheque, and after the marking he filled it in so as to make it a cheque for $500. This cheque so altered he took to the agency of the Imperial Bank at the corner of Yonge and Queen streets, deposited it to the credit of an account which he there opened. He then drew cheques upon this new account to the extent of $485 and got the money therefor. Bauer had been for some time employed in Toronto as agent for The Metropolitan Life Insurance Company, and being known at the different banks, no suspicion was felt as to the genuineness of the cheque. He was subsequently prosecuted for forgery in altering the certified cheque, and sentenced to imprisonment in the Kingston Penetentiary. The cheque so deposited with the Imperial Bank was, on the morning of January 27, sent by that bank, with the other cheques drawn upon the Bank of Hamilton, and also with the bills of that bank that had been deposited on the previous day in the Imperial Bank, and was presented at the clearing house in the usual way. Held, that the fraudulent alteration of the cheque by raising it from $5 to $500 constituted a forgery, and the condition of the cheque when certified by the bank afforded ample opportunity for the commission of the crime. But, under the law as now settled by the House of Lords, a drawee bank, in certifying a cheque, would be under no duty to take precautions against fraudulent alterations in a cheque, after certifying the same, any more than an acceptor of a bill of exchange is under a duty to take precautions against fraudulent alterations in a bill after acceptance. Schofield v. Earl of Londesborough (1895), 1 Q.B., 536 and (1896), A,, 514. Held also that the claim of plaintiffs against defendants in respect to the excess of the sum appearing on the cheque over the amount at which it was certified, is not in any way prejudiced by the rules of the clearing house. There was no negligence on the part of the plaintiffs, as the course they pursued in regard to the certified cheques was the one universally adopted by the banks since the establishment of the clearing house; and the holders of the cheques, the Imperial Bank, were not deprived of any rights, nor was their position altered by reason of notice of the forgery not being given until the following day. Judgment for plaintiffs for $495 and costs.

STAR

HACK SAWS
BUTCHER SAWS
BRACKET SAWS

THE STAR HACK SAW

Has a file temper, and one 5-cent blade will do more work than $1 worth of files. It will cut off an inch square bar of steel 100 times without filing.

THE STAR BUTCHER SAW

Will cut four times as long without filing as any other kind in use. It will cut off a half-inch rod of iron 30 times.

THE STAR BRACKET SAW

Is taking the place of all other kinds.

None of these Star Saws are to be filed, as the price is less than the cost of filing. They are taking the place of all other saws as fast as they become known.

For Sale by Most Hardware Dealers

We also make a Power Hack Saw which may be found in most machine shops and iron working establishments, and should be found in all.

Dominion Pattern

Cow Tie AND Stall Fixture

The special features of the tie and stall fixture are well shown in the illustration. As will be noticed the chain is very short which prevents all danger of entanglement with the animal's foot. At the same time the form of the fixture is such that great freedom is allowed to the head. Because of the short chain this tie is much cheaper than the ordinary patterns.

The stall fixture is made from a tough quality of steel and is very strong. Also, owing to its circular cross-section, it is exceedingly rigid. Its simplicity, convenience, cheapness, and ease of attaching make it very popular with cow tie users.

This form of tie and stall fixture are sometimes called Niagara pattern.

American or Flat Link Chain,

for years the standard cow tie chain in "the States," is now rapidly coming in favor in Canada. Its short link, handsome appearance and smooth surface—which cannot injure the animal's neck—make it superior to all other styles of chain for cow ties.

JOHN LYSAGHT, Limited
BRISTOL, ENG. MONTREAL.

Contractors Make Money

when they install the Safford Patent Radiators for hot water and steam heating. And they make *good* money, too. The Dollars and Cents profit is only part of it—the customer's satisfaction and good-will is the other half.

A leaky radiator will injure the business and the reputation of the best contractor in the world—the Safford Radiator is literally "always as tight as a drum." It has screwed nipple connections.

Toronto's City Hall and Court House are fitted throughout with Radiators made by the largest manufacturers of Radiators under the British Flag—

The Safford Radiators.

Established 1825 Important Decision relating to the Established 1825

HEINISCH

TRADE-NAME ON SHEARS, TRIMMERS, Etc.

The U.S. Circuit Court, Southern District of New York, Judge Townsend, has rendered a decision in the suit of "R. Heinisch's Sons Co. vs. Hermann Boker & Co."

"The Complainant is entitled to an accounting, and to an injunction restraining them from using the names 'Heinisch' or 'H. C. Heinisch' on its Shears, Labels, etc., and otherwise, in any way which will interfere with Complainant's enjoyment of the benefits of its Trade-name."

Referring to the above decision, we would respectfully state our determination to protect our rights in the premises and warn all persons against any imitation of our Trade-name.

Standard

These Twines will not bunch at the knotter, and a Binder will run all day with them without stoppage, thus saving time, annoyance and an endless lot of trouble.

We pack our twine in bags of the size of ordinary grain bags and are not ashamed to put our name upon them. Don't take any other.

Consumers Cordage Company, LIMITED, Montreal.

For "RUSH ORDERS" and the accommodation of our customers we carry a stock at our Toronto Branch: WM. B. STEWART, Agent, 27 Front St. West.

ENORMOUS ACTIVITY IN IRON AND STEEL.

SOME recent statistics collected by the United States Iron and Steel Association, emphasize what has been pointed out repeatedly in these columns regarding the tremendous activity in the iron and steel trade.

On June 30, a year ago, the unsold stock in the hands of manufacturers or their agents was 571,577 tons, whereas this year, on June 30, there were only 81,220 tons, a decrease of 490,357 tons.

With the quantity in warrant yards added o the above, there is a total of 127,193 tons, against 415,333 tons for the same period in 1898.

Not only has the enormous production of 1899, 6,289,000 tons, gone into consumption, but manufacturers' stocks are 210,000 tons less than they were at the opening of the present year, when the stock was 219,333 tons. The inference, therefore, is that the consumption during the first-half of 1899 has reached the enormous total of 6,577,000 tons, a figure that has never been equalled.

General Manager James M. Swank is not at all alarmed that this enormous movement will bring about the iron famine that some are predicting. He contends that the capacity of the United States for the production of pig iron is equal to any call that may be made upon it this year. He points out that the reserve capacity is being steadily drawn upon as demand increases, and he has no doubt that the supply of iron ore and fuel will also be equal to the demand.

Mr. Swank's conclusion that no famine is likely will be interesting to the trade, the majority of whom differ with him, because the doubling in price has led to a comparatively small quantity of reserve production.

Another influence has, however, to be considered in addition to those above mentioned, and that is that the vastly increased cost of iron and steel must have a marked effect upon current consumption, though just what it will be can only appear later.

Time spent in taking a holiday is well invested provided the holiday is wisely spent. There is nothing that is surer in the long run to give better results. Mind and body are invigorated and the days lengthened for earning more dollars. What more could be asked for?

TIN STILL BOOMING.

There appears to be no top to the market for ingot tin. Last week sensational advances were recorded, and they have again been duplicated this week.

On Tuesday, spot Straits in London was £2 15s. higher than it was the same day last week, while in Singapore it had advanced £7 5s, the quotations being £144 17s. 6d. at London, and £145 15s. c.i.f. at Singapore.

The position of the two markets has changed. Last week, London led the primary centre, but this week the latter is almost £3 above the London market.

This affords a pretty good idea of the excited position of the metal. In New York, the price has followed suit, and the spot quotation there is $1.40 higher than it was last week, at $32.90.

The condition of this metal is undoubtedly remarkable, and observers of its course are beginning to speculate as to when the tumble is due, for they feel that the steam cannot be kept up at its present pressure.

SHOT AT OPEN PRICES.

For some time past, the agreement in regard to the sale of shot has been a practical dead letter, and this week it is learned from jobbers, both in Toronto and Hamilton, that the article is now sold at an open price.

That is to say, any jobber is at liberty to sell at his own figure if he cares to do so, as the makers are not bound to anything.

At present, ordinary is nominally quoted at 6c. and chilled 6½c., less 7½ per cent. discount.

THE PRICE OF CANADIAN AND UNITED STATES WOOD SCREWS.

THERE is a general opinion that all lines of hardware are dearer in Canada than in the United States. It is undoubtedly true in a great many instances, but it is not true in all. It does not apply, for instance, to wood screws.

Wood screws are to-day lower in Canada than they are in the United States. For instance, on an average specification the list issued by the screw manufacturers in the United States to the home trade is about 17 per cent. above that issued by the Canadian manufacturers. Then, the discount to the retail trade is 82½ per cent., while that to the retail trade in Canada is 80 and 5 per cent., making the price of wood screws in Canada about 8 per cent. below that ruling in the United States.

The following table gives the Canadian and United States lists in comparison :

THEY BELIEVE IN THEIR TOWN.

The business people of Elkhorn, Man., believe in advertising their town. They have had a photograph of the place taken, and a cut made from the same. This has been printed on envelopes, so that any person to whom they are sent will be able to see what kind of a town Elkhorn is.

THE OUTLOOK FOR PRICES.

IN view of the extraordinary strength of the metal markets of the world, a good many people are asking whether it is likely to be maintained. The Kemp Manufacturing Co., of Toronto, recently submitted a similar question to A. G. Kidston & Co., Glasgow, Scotland, the well-known authorities appertaining to the metal trade. The following is the reply which the Messrs. Kemp received :

You ask us what our opinion is about these high prices being maintained. It is difficult to say. We must not forget that we had six or seven years of depression, and prices were forced down to figures that almost compelled working at a loss. The enormous demand for steel and iron of all kinds has made prices ever so much firmer, and tin has been roaring lately. It is now over £130 for Straits, and there are prophets who say that £150 will be touched before long. We do not say that this is not likely, because we understand the statistical position is good, and that supply is not likely to be increased to any extent for some time to come.

As to prices generally, we think, so far as we can judge at the present time, that these will be at least maintained, and quite possibly increased. Inquiries seem to flow in from all quarters. The world is expanding, and it is only right to look for two or three years of brisk trade after these years of depression of which we have spoken. A good deal depends upon the position of affairs in the United States. They are our great competitors. At the present time, they seem to have enough to do to supply their own requirements. Their new colonies, too, will be engaging their attention, and then such huge continents as Africa and Asia are consuming, and will consume, very large quantities of material in the years to come. Our colonies, and also other parts of the globe, are brightening up. We cannot help thinking that the enormously increased production of gold that has taken place within the last few years must be telling to the advantage of general trade.

It might be noted that since the Messrs. Kidston wrote the above letter, there has been a marked advance in tin on the London market. On Monday last, for instance, it touched £146 15s. Since then, however, there has been a decline, it having closed on August 2 at £144 5s.

INQUIRIES AND ANSWERS.

BAMBOO FURNITURE MAKERS.

A subscriber in last week's issue asked for the names of bamboo furniture makers in Canada. We are informed that Alex. Thompson, York street, Hamilton. The American Rattan Co., Walkerville, The Gendron Co., Toronto, and the Cobban Manufacturing Co., Toronto, are manufacturers of that kind of furniture.

THE NEED OF CAPABLE MEN.

EVERYBODY should read "A Message to Garcia," printed in another column. The article should be an inspiration, particularly to young men. Those who it will not inspire are to be pitied, for they must be dead to all stimulating influences.

The trouble to-day is not that there are too many seeking a livelihood, but that there are not enough ready to pick up at once the thread of duty and follow it intelligently and expeditiously.

Success in life is not a lottery. It is an assured fact as long as certain laws are obeyed.

If a young man only does his best when the eyes of his employer are upon him; if when he has opportunity to improve his mind and his knowledge of his vocation he wastes it; if when he has a duty to perform he procrastinates; if the time he owes to his employer is of more importance to him than the proper performance of his duty, how in the world can he be successful?

There never was a time in the history of the world when there were so many people for which employment had to be found; and there never was a time when there was more need of really first-class men in business, in the professions and in the various other vocations than now.

He who is ready to carry a message to Garcia is ready to pilot himself to success.

JOHN McKEOUGH, CHATHAM, DEAD.

John McKeough, a pioneer hardware merchant of Chatham, Ont., died suddenly at his residence in that place on Wednesday last week. Mr. McKeough started a hardware store in Chatham about 50 years ago, and, when he retired 10 years ago, was proprietor of a large business. Mr. McKeough leaves a widow, but no children.

CANADA AS AN IRON PRODUCER.

Frank B. Baird, who is extensively engaged in the manufacture of iron and steel in Buffalo, gave evidence before a New York State Commerce Commission the other day.

He has been studying the iron industry in Canada, and believes this country is destined to become one of the great iron producing countries of the world, and that a great amount of capital will be put into this industry in the next few years.

He had examined within a week four different sets of plans for furnaces in Nova Scotia.

The Welland canal is, in Mr. Baird's opinion, the best spot in North America for a blast furnace, because of the bounty offered by the Canadian Government and the excellent shipping facilities afforded by a site on this canal.

He expects to begin the erection of a furnace on the Welland next spring.

MIDSUMMER STORE WINDOWS.

Because it is more difficult during midsummer, owing to the aggressiveness of the common house fly and the prevalence of street dust, to keep the store window clean and attractive, is no reason why laxness should be allowed to develop. On the contrary, it is all the more reason why double vigilance should be exercised in the care of the window.

FLAT HEAD BRIGHT SCREWS ARE DEARER.

An advance of about 14 per cent. is announced this week in the price of flat head (bright) screws, the discount having been reduced to 80 and 5 per cent. It was on April 1 that the last change was made, when the discount was fixed at 82½ and 5 per cent.

There is no change in other descriptions of wood screws.

ANOTHER ADVANCE IN CAST HARDWARE.

It was announced in last week's issue that the manufacturers of cast iron in the United States had advanced their prices about 10 per cent.

Another circular bearing date of July 28 has now been received by the importing trade in Canada announcing a further advance of 20 per cent.

The advance in labor, the further increase in the cost of metals and other raw materials used in the manufacture of cast hardware are the causes to which this last appreciation in prices are ascribed.

The manufacturers of shelf hardware in the United States have been rather conservative in raising their prices, having only done so when the high cost of raw material necessitated their doing so.

THE COPPER SUPPLY.

IN view of the unusual activity in opening up new copper mines in the United States, and the consequent impression that the present year would witness an enormous production of copper, the report of the American Copper Producers' Association is timely and valuable.

It shows that the production for the first half of the present year was 248,974,000 lb., as compared with 240,974,000 lb. in the first half of last year, an increase of 8,000,000 lb., or 3⅓ per cent.

In the Lake Superior region, where over 20 new mines have been opened, only one is likely to add anything material to the output this year, and few of them would produce considerable quantities in 1900. Some of the old mines in this region, however, are largely increasing their facilities for production. Two of them, the Franklin and the Osceola, have built new stamp mills which will enable them to increase their annual production by nearly 20,000,000 lb., though this will not all be attained before 1900. It is estimated that the total production of this region will be increased from 158,000,000 lb. in 1898 to 165,000,000 lb. in 1899, and 185,000,000 lb. in 1900.

The production in Montana dropped from 230,000,000 lb. in 1897 to 206,000,000 lb. in 1898, but may reach the production of 1897 this year.

In Arizona, the greatest development has been shown recently. In 1897 the production was 81,500,000 lb., in 1898 it was 111,000,000 lbs. Further increase is looked for this year, though many new properties will not begin to materially add to the output before next year.

The only properties in the Southern States that are expected to considerably increase their output are under the control of The Tennessee Copper Co. This company is constructing a large plant, but the product from it will not be ready before late next year.

The deduction from this fact is, that though the output this year will not be increased in an unusual way, next year the production is likely to assume unprecedented proportions.

A MESSAGE TO GARCIA.

HARDWARE AND METAL has time and again pointed out that, notwithstanding the alleged overcrowding of the various vocations in life, there was still room at the top ; room for those with ability, industry, independence and sobriety. It is, therefore, with more than usual pleasure that the following is printed :

In all this Cuban business there is one man stands out on the horizon of my memory like Mars at perihelion. When war broke out between Spain and the United States, it was very necessary to communicate quickly with the leader of the insurgents. Garcia was somewhere in the mountain fastnesses of Cuba—no one knew where. No mail nor telegraph message could reach him. The President must secure his co-operation, and quickly.

What to do !

Someone said to the President: "There's a fellow by the name of Rowan will find Garcia for you, if anybody can."

Rowan was sent for and given a letter to be delivered to Garcia. How "the fellow by the name of Rowan" took the letter, sealed it up in an oil-skin pouch, strapped it over his heart, in four days landed by night off he coast of Cuba from an open boat, disappeared into the jungle, and in three weeks came out on the other side of the Island, having traversed a hostile country on foot, and delivered his letter to Garcia, are things I have no special desire now to tell in detail.

The point I wish to make is this : McKinley gave Rowan a letter to be delivered to Garcia ; Rowan took the letter and did not ask, "Where is he at?" By the Eternal ! there is a man whose form should be cast in deathless bronze and the statue placed in every college of the land. It is not book learning young men need, nor instruction about this and that, but a stiffening of the vertebræ which will cause them to be loyal to a trust, to act promptly, concentrate their energies ; do the thing—"Carry a message to Garcia !"

General Garcia is dead now, but there are other Garcias.

No man has endeavored to carry out an enterprise where many hands were needed but has been well-nigh appalled at times by the imbecility of the average man—the inability or unwillingness to concentrate on a thing and do it. Slipshod assistance, foolish inattention, dowdy indifference, and half-hearted work seem the rule ; and no man succeeds, unless, by hook or crook, or threats, he forces or bribes other men to assist him ; or, mayhap, God in His goodness performs a miracle, and sends him an angel of light for an assistant. You, reader, put this matter to a test : You are sitting now in your office—six clerks are within call. Summon any one and make this request, "Please look in the encyclopædia and make a brief memorandum for me concerning the life of Correggio."

Will the clerk quietly say "Yes, sir" and go and do the task ?

On your life he will not. He will look at you out of a fishy eye and ask one or more of the following questions :

"Who was he ?"

"Which encyclopædia ?"

"Where is the encyclopædia ?"

"Was I hired for that ?"

"Don't you mean Bismarck ?"

"What's the matter with Charlie doing it ?"

"Is he dead ?"

"Is there any hurry ?"

"Shan't I bring you the book and let you look it up for yourself ?"

"What do you want to know for ?"

And I will lay you 10 to one that, after you have answered the questions and explained how to find the information and why you want it, the clerk will go off and get one of the other clerks to help him try and find Garcia, and then come back and tell you there is no such man. Of course, I may lose my bet, but, according to the law of the average, I will not.

Now, If you are wise, you will not bother to explain to your "assistant" that Correggio is indexed under the C's, and not in the K's, but you will smile sweetly and say "Never mind," and go and look it up yourself.

And the incapacity for independent action, this moral stupidity, this infirmity of the will, this unwillingness to cheerfully catch hold and lift, are the things that put pure socialism far into the future. If men will not act for themselves, what will they do when the benefit of their effort is for all ? A first mate with knotted club seems necessary ; and the dread of getting "the bounce" Saturday night holds many a worker to his place.

Advertise for a stenographer, and 9 out of 10 who apply can neither spell nor punctuate—and do not think it necessary to.

Can such a one write a letter to Garcia ?

"You see that bookkeeper ?" said the foreman to me in a large factory.

"Yes, what about him ?"

"Well, he's a fine accountant, but if I'd send him up town on an errand, he might accomplish the errand all right, and, on the other hand, might stop at four saloons on the way, and when he got to Main street would forget what he had been sent for."

Can such a man be entrusted to carry a message to Garcia ?

We have recently been hearing much maudlin sympathy expressed for the "down-trodden denizen of the sweat-shop" and the "homeless wanderer searching for honest employment," and with it all often goes many hard words for the men in power.

Nothing is said of the employer who grows old before his time in a vain attempt to get frowzy-ne'er-do-wells to do intelligent work, and his long, patient striving with "help" that does nothing but loaf when his back is turned. In every store and factory there is a constant weeding-out process going on. The employer is constantly sending away "help" that have shown their incapacity to further the interests of the business, and others are being taken on. No matter how good times are this sorting continues, only if times are hard and work is scarce, the sorting is done finer — but out and forever out the incompetent and unworthy go. It is the survival of the fittest. Self-interest prompts every employer to keep the best—those who can carry a message to Garcia.

I know one man of really brilliant parts who has not the ability to manage a business of his own, and yet who is absolutely worthless to anyone else, because he carries with him constantly the insane suspicion that his employer is oppressing or intending to oppress him. He cannot give orders, and he will not receive them. Should a message be given him to take to Garcia, his answer would probably be, "Take it yourself."

To-night, this man walks the streets looking for work, the wind whistling through his threadbare coat. No one who knows him dare employ him, for he is a regular firebrand of discontent. He is impervious to reason, and the only thing that can impress him is the toe of a thick-soled No. 9 boot.

Of course, I know that one so morally deformed is no less to be pitied than a physical cripple ; but, in our pitying, let us drop a tear, too, for the men who are striving to carry on a great enterprise, whose working hours are not limited by the whistle, and whose hair is fast turning white through the struggle to hold in line dowdy indifference, slipshod imbecility and heartless ingratitude,

which, but for their enterprise, would be both hungry and homeless.

Have I put the matter too strongly? Possibly I have; but when all the world has gone a slumming I wish to speak a word of sympathy for the man who succeeds—the man who, against great odds, has directed the efforts of others, and, having succeeded, finds there's nothing in it; nothing but bare board and clothes.

I have carried a dinner pail and worked for day's wages, and I have also been an employer of labor, and I know there is something to be said on both sides. There is no excellence, per se in poverty; rags are no recommendation; and all employers are not rapacious and high-handed, any more than all poor men are virtuous.

My heart goes out to the man who does his work when the "boss" is away as well as when he is at home. And the man who, when given a letter for Garcia, quietly takes the missive without asking any idiotic questions, and with no lurking intention of chucking it into the nearest sewer, or of doing aught else but deliver it, never gets "laid off," nor has to go on a strike for higher wages. Civilization is one long anxious search for just such individuals. Anything such a man asks shall be granted; his kind is so rare that no employer can afford to let him go. He is wanted in every city, town and village—in every office, shop, store and factory. The world cries out for such; he is needed, and needed badly—the man who can carry a message to Garcia.

Ed. Note.—The above very interesting article has a history of its own. It was originally written by Elbert Hubbard, editor of The Philistine, appearing in March, 1899. Mr. George H. Daniels, general passenger agent of the New York Central railroad, pronounced it one of the best things he had ever read, and backed up his opinion by at once ordering a large edition, which order he repeated, until to-day the printers are at work upon the fifth hundred thousand in booklet form for distribution.

Mr. Daniels explains the matter thus:

Having received so many requests from clergymen, teachers, and others interested in the education of the young for copies of "A Message to Garcia," we decided, after securing the kind permission of the author, to make it one of our "Four-Track Series," which is an educational as well as a travel series, and to print it in editions of one hundred thousand until the demand is supplied, if it akes the entire 20th century to accomplish it.

SELF-ADVERTISING PAINT . . .

is what one of our agents calls S.W.P. It is advertised by its own good qualities. One sale makes many other sales. It gives such splendid satisfaction that the man who once uses it always uses it, and always recommends it.

It is no uncommon occurrence to have one house painted with S W.P. and to find the whole neighborhood soon "following suit."

THE SHERWIN-WILLIAMS PAINT

breeds enthusiasm. Every customer becomes a warm advocate of the Paint. He tells his friends about it. His house tells them about it, too.

Trade is bound to grow under such circumstances. Nothing but the size of the town can limit it, and it will be YOUR trade that grows, if you get the agency. Some towns are still open.

A RARE OCCURRENCE.

The departure of a steamboat from Winnipeg is of such rare occurrence in these days that the sailing of the Viking one afternoon recently for Selkirk should not be allowed to pass without notice. The Viking was launched on Dominion Day in the vicinity of Brown & Ruthersord's mill, Point Douglas, where it was built on the bank of the Red river, by Mr. Anderson, for Mr. Burns. It has since been running on the river and Lake Winnipeg, its machinery being driven by a gasoline engine. Pretty severe weather was encountered on the lake, and some of the passengers tell quite a sensational story about the loss of the anchor, and the opportune coming of a wave which carried the boat upon a sand bank, at a moment when destruction upon the rocks was threatened. When the storm subsided the water rose, and the Viking floated off uninjured.—Free Press.

THE MAN WHO SUCCEEDS.

Success in business is not to be reached nowadays in the easy-going methods that obtained a generation or two ago, says Geyer's stationer. Times have changed, and the people have changed with them. Push is the only thing that will carry a man ahead, and it is the liveliest pusher that gets there first. He mustn't sit down and wait for business to come to him, or he may sit until the seat of his pants wears out, and be that much the poorer. The chronic pusher, the dyed-in-the-wool hustler, he is the man that lets other fellows wait while he rushes ahead and pockets what they are after. What is the manner of his pushing? How does he do it? Well, in two or three ways, but here is one in which he puts implicit faith. As a general rule, the chronic pusher is a chronic advertiser. Printers' ink is the lubricating oil of his business wheels, and he never allows them to lag or creak for the want of it. He may pinch and economize in other directions, but he would look upon "cutting his ad." as only another phase for cutting his throat. Hard times and poor business are incentives to increase his advertising, rather than any argument to him for cutting it down—upon the principle that it needs more power to drag a cart up than down hill. It will pay the semi-occasional advertiser to ponder over the pusher's success, and he may possibly find in the cause of it some cause for the lack of his own.

WILL CHARGE CARTAGE.

The wholesale produce dealers of Vancouver have united in issuing the following circular to the trade: "Owing to the slender margin of profit upon which the wholesale produce and provision trade is conducted, it becomes necessary for those engaged in the trade to make a charge for the items of cartage and wharfage necessary to place the goods on cars and various steamers. At all other points these charges are included in the rates of freight. This charge will amount for wharfage, 50c. per ton, with a minimum of 15c., and cartage 50c. per ton, with a minimum of 15c. Where both services are performed, the charge will be $1 per ton, with a minimum charge of 30c. The practice of dating ahead is hereby discontinued; all goods will be dated from time of shipment."

TRADE CHAT.

ON Sunday, Alex. Leitch's basket works at Ridgetown, Ont., were burned to the ground. The fire was started from a spark from a passing locomotive. The loss is partly covered by insurance.

The Chatham, Ont., Hedge Fence Co., have increased their capital from $25,000 to $35,000.

The Horn Gold Mining Co., with headquarters in Halifax, is applying for incorporation.

The Pearl Mining Co., Limited, with headquarters at Ottawa, is applying for incorporation.

The Yarmouth, N. S., Times says that Maitland, N.S., will soon boast a bicycle manufactory of modern proportions.

The Fairchild Co., Limited, manufacturers of vehicles, machinery, etc., Winnipeg, are applying to increase their capital stock to $100,000.

The Gold Panner Mining Co., of Ontario, Limited, has been incorporated, with a capital of $999,999. Its headquarters are in Rat Portage, Ont.

About 100 prisoners are engaged in making binder twine at the Central Prison, Toronto. More machinery is to be put in that will increase the output from five to six tons per day.

During the last seven months, Vancouver Island collieries shipped 436,000 tons of coal to San Francisco, Los Angeles, Alaska, Puget Sound points and China. During July, 58,000 tons were exported.

The Xochimileo Peat Fuel Co., Limited, Toronto, has been incorporated with a capital of $100,000. The directors are : A. A. Dickson, E. W. Spragge, D. A. McPherson, J. S. Loudon, of Toronto, and J. A. G. Aidagh, of Barrie.

The Hammond Gold Reef Mining Co., Limited, and The Folger-Hammond Mines Co., Limited, have been amalgamated under the style of The Hammond Reef Consolidated Mining Co., Limited, with headquarters in Toronto.

The owners of the land that North Sydney council expropriated to grant to The Dominion Iron and Steel Company, are dissatisfied with the remuneration offered them, and held a meeting the other day and appointed an appraiser. Legal actions are expected to follow.

A firm in Harrisburg, Pa., propose constructing an electric railway connecting Woodstock, Ont., with some of the neighboring towns. Dr. Ickes is in Woodstock for the purpose of arranging final details with the town council, and there is little reason to doubt that matters will be concluded satisfactorily. It is expected that the first line will be constructed from Woodstock to Hickson and Embro.

The United States Geological Survey report the total production of coke in 1898 as 16,047,209 short tons, with a value of $25,586,899. This was more than 20 per cent. in excess of any previous year in the history of the industry, 21 per cent. more than in 1897, and nearly 90 per cent. more than that of 1888, and five times greater than the 1880 output, the first recorded. The average price per ton fell from $1.66 in 1897 to $1.59 in 1898.

WINDOW GLASS DEARER.

THE long delay in the arrival of import orders of window glass, and the consequent shortage of supplies here have combined with the firm feeling in Belgium to cause jobbers in Toronto to advance the price of glass in stock.

The ratio of advance varies according to the degree of scarcity of the different sizes. In 50 ft. boxes of star glass the advance is 15c. for sizes under 26 in., and 10c. for 26 to 40 in. In 100 ft. boxes all sizes up to 80 in. are 25c. dearer, from 81 to 85 in. the advance is 20c. Above that there is no change. Double diamond in 50 ft. boxes is 30c. dearer for sizes up to 26 in., and from 26 to 40 in. the advance is 35c., though in one size, 16 x 16, a special discount of 10 per cent. is offered. In 100 ft. boxes double diamond is unchanged for sizes under 41 in. From 41 to 85 in. the advance is 25c. From 86 to 110 in. a rise of 50c. is noted.

The following prices are now quoted :

	Star.		Double Diamond.	
	50 ft.	100 ft.	50 ft.	100 ft.
Under 26.....	$2 15	$4 00	$3 50	$6 00
26 to 40.....	2 25	4 35	3 75	6 65
41 to 50.....	....	4 75	....	7 25
51 to 60.....	....	5 00	....	8 50
61 to 70.....	....	5 35	....	9 25
71 to 80.....	....	5 75	....	10 50
81 to 85.....	....	6 50	....	11 75
86 to 90.....	....	7 25	....	14 00
91 to 95.....	.....	....	....	15 50
96 to 100.....	....	....	....	18 00
101 to 105.....	....	....	....	21 00
106 to 110.....	....	....	....	24 00
111 to 115.....	....	....	....	28 00

16 x 16 10 per cent. off.

Those who placed import orders this season will be glad to learn that the first orders are now on their way to Canada, and it is expected that after the first orders arrive there will not be long to wait for the remainder.

THOROUGH ORGANIZATION.

An ample stock and a prompt service in the matter of shipments is the system successfully pursued by The Canada Paint Company, of Toronto and Montreal. Their works, notwithstanding the summer dullness which generally prevails at this time of the year, are running full time and all orders are quickly despatched. Moreover, intending visitors will always receive a cordial welcome and may see the largest and most interesting varnish, lead and color plants in the Dominion.

FARMERS' TEAMS IN NEEPAWA.

I do not know of a better sight than is to be seen in Neepawa, Man., on a Saturday, when the two main streets are crowded with farmers' turnouts. One would travel a long time before he would come to a town where farmers have such good horses. This speaks well for the prosperous condition of the country. It is like a country fair to see the number of people in town. In fact, while the 'bus was carrying me from the station to the hotel, I thought something of the sort must be going on. It must be remembered that the Manitoba and Northwestern railway tried to side-track the town by erecting the station about half a mile away from the town. While driving through the district around Neepawa, I was struck with the richness of the soil and the healthy condition of the wheat, in spite of the vast amount of rain that had fallen.

ADVANCE IN SHERWIN-WILLIAMS PAINTS.

Under date of August 1, the following circular has been sent out to the trade by the Sherwin-Williams Co.:

The advance in the cost of raw materials makes it necessary to advance our prices as below, taking effect August 1, 1899.:

The Sherwin-Williams paint (prepared), S.W.P., 10c. per gallon ; The Sherwin-Williams porch floor paint, 10c. per gallon ; The Sherwin-Williams special interior colors, 10c. per gallon ; The Sherwin-Williams special floor paint, 10c. per gallon.

We are pleased that it was possible for us to defer this advance until now, thus avoiding annoyance to you during the busy season, but the continued advances in costs make an advance in our prices to you now absolutely necessary.

Costs to us may still be higher. There is no probability of their being any lower in the near future. We trust that we may be favored with your usual orders for stock for fall trade.

A NEW MEAT CHOPPER.

The Thos. Davidson Manufacturing Co., Montreal, are putting a new chopper on the market, called the "Sterling," which they claim is the best yet made. Four sizes of discs go with the machine, one for cutting meats, crackers, bread, etc., another for cooked meats and vegetables, another for fruits, salads, and foods desired in large pieces, while the fourth is a grater attachment for horseradish, cocoanut, etc. The machine is so simply constructed that it can be taken apart and cleaned with unusual ease. A small leaflet describing this chopper has been issued, and can be had on application.

THE CHILD'S LIFE WAS SAVED.

Fliegende Blaetter tells this : "One day I was riding alongside the railroad," said a traveler who had just returned from America, "when an express train came along. Just ahead, a little two-year-old child was standing on the track picking flowers. In a few seconds, the child would be crushed to death by the train. What should I do ? Quickly taking my lasso, which I was in the habit of using to catch wild cattle, I whirled it in the air, and, a second later, the locomotive was caught by the trusty rope. One strong pull, and the locomotive lay on its side in the ditch. To be sure, 200 lives were lost, but the child was saved ! "

DON'T BE UNJUST TO THE JOBBER.

By G. S. Mann.

NOW that we are entering upon a new era of prosperity, we should not forget the lessons of the depression through which we have recently passed. In perpetuating our enforced economies lie the possibilities of future success. To sell closely and quickly, to credit carefully, to discount purchases and to collect promptly are going to be the rules, from this time forward, of the majority of those who have weathered the storm. In some lines of trade, the discounts for cash will amount to enough to pay the expenses of the business. In such lines, therefore, one should never never fail to take advantage of the discounts offered.

Some retail dealers appear to think that a few days later than the terms stated will make no difference. In such conclusions they are greatly mistaken. "Two per cent. 10 days" means just what it says, and the purchaser ratifies the contract of sale, of which this is an important part, whenever he accepts the goods. He should, therefore, be as scrupulous to observe that part of the agreement as any other.

The clause above quoted does not mean: "Send the money when you get ready and take off your discount," but, instead, it is: "If your remittance reaches us within 10 days from date of invoice, we will give you 2 per cent. discount."

Does the retail merchant ever realize that anything less than this is not a payment in full? The amount of the discount or the delay beyond the date may be trifling, but the times through which we have been passing have been of the kind to demonstrate that it is trifles which make or mar business. As a fact, the aggregate of such trifles is a considerable amount.

Certainly, no fair-minded and honorable business man would continue the practice of varying from the letter of the contract after once giving the matter careful thought.

The practice of exceeding the discount limit on invoices is an indication of a desire to get the best of the jobber in little things that often proves a forerunner of worse to come. Hence, in part, the attention that the jobber is likely to pay to such matters, and hence, in part also, the reason why the merchant should refrain from such things in the sense of avoiding the appearance of evil.

While in an individual case slightly exceeding the discount limit seems a matter too small to notice, the aggregate of many items is a considerable loss to the jobber. A delay in payment, or a discount unjustly deducted, both of which are breaches of the contract of sale, are, in fact, large factors that must be considered by the jobber and carefully covered in his calculations. He must have a margin of profit sufficiently large to take care of these expenses without loss. The universal compliance with the contract of sale by the customers of a jobber would enable him to lower his prices.—Exchange.

BUSINESS CHANGES.

DIFFICULTIES, ASSIGNMENTS, COMPROMISES.

J. B. Nulty, general merchant, Onge Gardien, Que., is offering 50c. on the dollar.

Graine & Roy, general merchants, etc., Cascade City, B. C., have assigned to James Good.

Ignace Moquin, general merchant, Crysler, Ont., has assigned to Archibald McNab.

D. Armand has been appointed curator of the estate of U. F. Drouin, hardware dealer, Quebec.

Alex. Desmarteau has been appointed curator of the estate of T. Crevier, founder, Montreal.

A meeting of the creditors of Ross & Somerville, bicycle dealers, etc., Sarnia, Ont., has been held.

J. & P. Nadeau, general merchants and lumber dealers whose sawmill was recently burned, are offering 50c. on the dollar.

PARTNERSHIPS FORMED AND DISSOLVED.

Grothe Freres, builders, Montreal, have dissolved.

Nap. Mercier & Cie., saw filers, Levis, Que., have dissolved.

Archambault & Bertrand, blacksmiths, Montreal, have dissolved.

M. S. Taylor & Co., general merchants, Mansonville, Que., have dissolved.

Manson & Adie, general merchants and hotelkeepers, Waneta, B.C., have dissolved, Frederick Adie continuing.

SALES MADE AND PENDING.

S. McBratney, blacksmith, Acton, Ont., is advertising his business for sale.

Wm. McKernan, blacksmith, Woodham, Ont., is advertising his business for sale.

The stock of C. H. Beaulieu, general merchant, New Carlisle, Que., has been sold at 37c. on the dollar.

G. W. Z. Holmes, dealer in tinware, etc., Hintonburg, Ont., has sold his stock at 53½c. on the dollar.

CHANGES.

Lederman & Co., general merchants, Baden, Ont., have been succeeded by Wm. Peffer.

John Mannerow, general merchant, Desboro, Ont., has been succeeded by John Reehn.

B. F. Myles, general merchant, Thompson Station, N.S., has sold out to W. C. Brown.

B. Havey has bought out the stock of H. W. Benson, hardware dealer, Bridgetown, N.S., and has opened up in that place.

Gilbert McMulkin is opening out as hardware dealer in St. John, N.B.

M. R. Wells, sawmiller, Central Park, B. C., has been succeeded by Wells & Smirl.

Wm. Beatty, planing miller, etc., Harriston, Ont., has been succeeded by J. E. Merriam.

E. H. Morlock & Co., general merchants, Tavistock, Ont., have been succeeded by G. G. Peppler.

Waring, White & Co., machinists, St. John, N.B., have been succeeded by the St. John Iron Works, Limited.

T. A. Blackwell, harness dealer, etc., Melita and Pierson, Man., has sold out the Pierson branch to R. R. Rooks.

FIRES.

J. F. Beckham's planing mill, Montreal, has been burned; partially insured.

Varsene Bourdon, saddler, Laprairie, Que., has been burned out; partially insured.

Thomas Hetherington, general merchant, Cody's Station, N.B., has been burned out; partially insured.

The premises of The D. F. Jones Mfg. Co., manufacturers of shovels, Gananoque, Ont., have been damaged by fire; insured.

DEATHS.

Richard B. Pinkay, saddler, Huntingdon, Que., is dead.

John E. Freeman, general merchant, Harmony, N.S., is dead.

James McCabe, general merchant, Notre Dame du Lac, Que., is dead.

NATURE OF SMOKE.

The investigations that have been made by the various learned commissions appointed for the purpose and by independent observers have all agreed, says American Manufacturer, on one point, viz, that the composition of smoke varies according to circumstances, such for instance as the nature of the fuel, the method of firing, the character of the grate, etc. In a general way smoke may be said to consist of five principal ingredients, viz.:

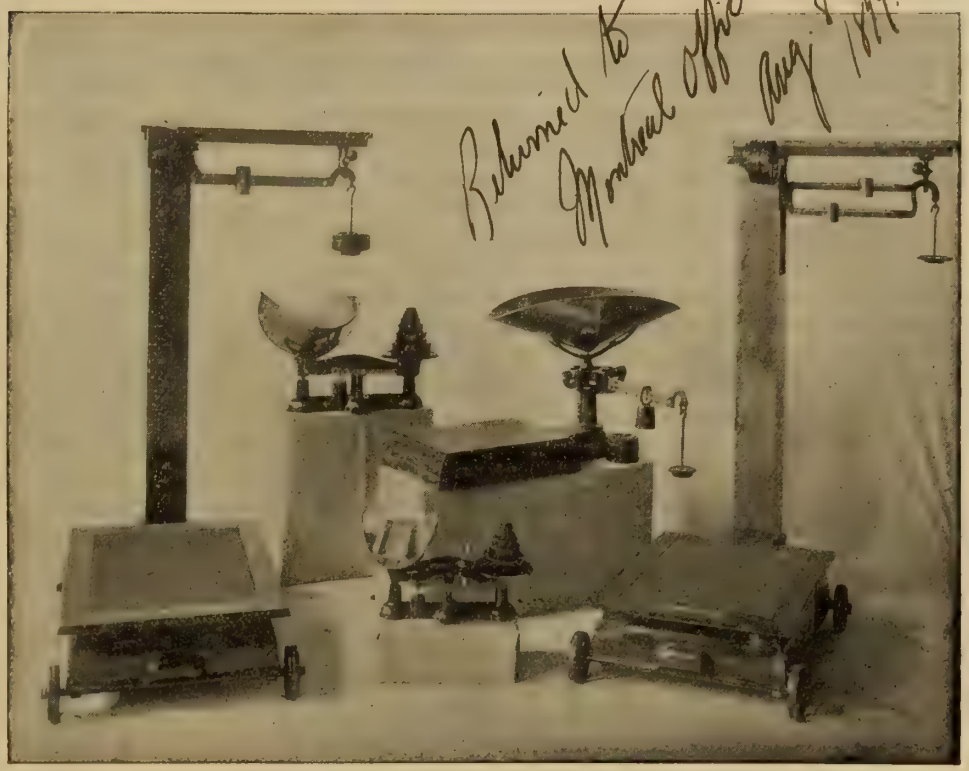
1. Unconsumed carbon in a state of extreme fineness, so-called soot, or "blacks."

2. Tarry matters from the fuel.

3. Dust particles, and small fragments of fuel carried along by the draft.

4. Non-combustible gases, such as the nitrogen of the air, carbonic acid, aqueous vapor and sulphur and ammonia compounds derived from the complete odidation of a portion of the fuel.

5. Combustible gases, such as carbon monoxide, derived from the incomplete oxidation of the fuel.



Whose Scales to Handle?

THE RIGHT ANSWER IS AT THE RIGHT.

We want your **FALL ORDER,** and have prepared to fill it promptly.

Our "Dominion," Platform, "Richelieu" Union, and "Crown" Even balance Scales are the leading Low-Priced Scales sold in Canada.

Our prices are right.

We will furnish you attractive circulars with your name on them.

We shall have to raise prices soon, so do not fail to order promptly.

QUALITY: That's our Watchword.

Since 1830, when Thaddeus Fairbanks invented the Platform Scale, Fairbanks Scales have been the world's standard, and never have we made so many scales or made them so well. The more we make, the cheaper we can make them.

Quantity is the greatest factor in production. That explains why we can give you so much better value for your money. We have never been so well prepared to fill Canadian orders, and want to hear from you.

FAIRBANKS

The Fairbanks Co.

749 Craig St., MONTREAL.

MARKETS AND MARKET NOTES.

QUEBEC MARKETS.

MONTREAL, August 4, 1899.

HARDWARE.

BUSINESS has been maintained in fair volume during the past week, and the general upward tendency is as pronounced as ever. Flat head screws are 2½ per cent. higher, revolvers are 10 per cent. up, and sleigh bells 15 per cent., while makers have withdrawn prices on hammers. Screws, bolts and nuts still furnish a good movement, but business in other lines is less noticeable.

BARBED WIRE—There is not much doing, and prices are unchanged. At the factory, $3 is asked, and, in small quantities, $3.10 to $3.15 is a range.

SMOOTH STEEL WIRE — Business has been moderate since the advance noted last week. We quote $2.85 f.o.b. factory as the base price.

GALVANIZED WIRE — Business is quiet, but prices are firmly held on the basis of $3 for No. 9.

FINE STEEL WIRE—Discounts the same: 20 per cent., with trade dull.

BRASS AND COPPER WIRE — Continues as last reported, at 50 and 2½ per cent. off on brass, and 45 and 10 per cent. on copper wire.

FENCE STAPLES — We quote: $3.05 for bright and $3.65 for galvanized per keg of 100 lb.

FINE STAPLES—Business is moderate in these. Discounts are: Cooper, 55; poultry netting, 45, and electrician, broom, bed, etc., 40 per cent. off.

WIRE NAILS—Both jobbers and retailers are sorting up stocks, and the fact leads to a fair movement. The base price is firmly held at $2.70 f.o.b. Montreal.

CUT NAILS—A lot of small orders keep arriving, and the fact imparts a considerable degree of activity to the market. We quote $2.25 f.o.b. here.

HORSE NAILS — A fair business is noted for forward account. Discounts are 50 per cent. on standard and 50 and 20 on Acadia.

HORSESHOES — Quiet, but inquiry for forward account is commencing to make itself felt. We quote as follows: Iron shoes, light and medium pattern, No. 2 and larger $3.50; No. 1 and smaller, $3.75; snow shoes, No. 2 and larger, $3.75; No. 1 and smaller, $4; X L steel shoes, new light pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; featherweight, all sizes, Nos. 0 to 4, $5.15; and toe weight steel shoes, all forward, all sizes $6.25 f.o.b. Montreal, St. John, N.B., and Halifax, N.S. Delivered f.o.b. in Toronto, Hamilton, London and Guelph 10c. per 100 lb. extra.

SCREWS — There is an active trade in these, and the price of flat head bright has been advanced 2½ per cent. Other kinds are unchanged. Discounts are: Flat head, bright, 80 and 5 per cent; round head do., 75 and 5; flat head, brass, 75 and 5; round head do., 67½ and 5.

BOLTS — There is a good trade in these. Discounts are: Carriage bolts, 5-16 and smaller, 55 per cent.; ⅜ and up, 50 per cent.; full square bolts, 65 per cent.; machine bolts, 55 per cent.; coach screw bolts, 67½ per cent., and sleighshoe bolts, 72½ per cent.

NUTS AND WASHERS—Same can be said of

Preserving Kettles

these. We quote: Square, 3¾c. and hexagon 4¼c. per lb. ; discount off list. Washers in 50-lb. boxes are 50 per cent. discount.

RIVETS—Business in these is well maintained for the season. Discounts now are: Black and tinned, 45 per cent.; ditto burrs, 40 per cent.; copper rivets and burrs, 35 per cent.

CORDAGE — With primary advices very firm, the market is strong in tone and inquiry is fair. We quote as follows: Manila, 7-16 and up, 12c.; ⅜, 12½c., and ¼ and 5-16, 13c. Sisal, 10¾c. for 7-16 and up; 11¼c. for ⅜, and 11¾c. for ¼ and 5-16. Binder twine: Pure manila, 10½c.; 550 feet, 10c.; sisal, 500 feet, 9½c.

WRINGERS—A good trade is noted in these. Values range from $48 to $60, as to brand, with 45 per cent. discount.

BUILDING PAPER—There has been a fairly brisk trade in this material.

GREEN WIRE CLOTH—It seems impossible to get supplies forward freely, and buyers are handicapped for this season. The basis is firm at $1.75.

SPADES AND SHOVELS—There is a moderate trade in these with discounts unchanged.

HARVEST TOOLS — Continue as last reported.

SPORTING GOODS—Jobbers were notified this week that revolvers had been advanced 10 per cent. Inquiry for firearms and ammunition is satisfactory.

TOOLS—Prices have been withdrawn on hammers, and auger bits are very scarce.

SLEIGH BELLS—These have been advanced 15 per cent. on previous prices.

CEMENT—There has been an improved demand for cement during the week, carload lots moving quite freely. Values are steadily held. We quote: Belgian, $1.90 to $2.10; English $2.30 to $2.40, and German, $2.45 to $2.65, per cask ex wharf.

FIREBRICKS—There is a good demand for firebricks, the movement being large for this season of the year. Prices are $17 to $23 per 1,000, as to brand, ex wharf.

METALS.

The metal market continues remarkably strong for all sorts, tin, pig iron, Canada plate, tinplate and galvanized iron also reflecting an unmistakable upward tendency.

PIG IRON—This market continues as strong as ever. The inside price for Scotch pig is now $24 for leading brands, and for small quantities $25 is asked. As already noted, no quotations are obtainable on Hamilton pig.

BAR IRON—This material continues firm and quite a few car lots are moving. The general price is $2, and though a lower figure has been spoken of, the case was an exceptional one.

BLACK SHEETS —There is a fair demand for these on forward account. We quote: 8 and 16, $2.45; 18 and 20, $2.15; 22 and 24, $2.35; 26, $2.40, and 28, $2.45.

HOOP IRON—Firm and higher at $2.60 to $2.70.

STEEL—Firmly held. We quote: Sleighshoe and tire, $2.50; spring, $2.75; machinery, $3, and toe calk, $3.

GALVANIZED IRON—Inquiry is active, but, with light stocks, jobbers are very conservative. Prices are firmly held. We quote: Queen's Head, $4.55 to $4.80; Comet brand, $4.30 to $4.55, according to the size of the order.

INGOT COPPER —Prices have advanced both in London and New York, and the spot figure is firm at 19½ to 20c.

INGOT TIN — The excitement in this metal continues, a further sensational advance being scored both at London and New York. Here it is firm at 36c.

PIG LEAD — Firmness is noted on outside markets, and spot prices are strongly held at $4.25.

LEAD PIPE—Quiet. We quote as follows: Ordinary, 7c., and composition waste, 7½., with 20 per cent. discount.

IRON PIPE—There is a good demand for iron pipe, but prices here are still as last quoted: Black pipe, ⅛ and ¼-inch, $3.12; ⅜-inch, $3.09; ½-inch, $3.72; ¾-inch, $5.14; 1-inch, $6.82; 1¼-inch, $8.66 and 2-inch, $11.02. Galvanized pipe, ⅛ and ¼-inch, $5.64; ⅜-inch, $6.64; ½-inch, $7.41; ¾-inch, $10.12; 1-inch, $14.03; 1¼-inch, $17.16, and 2-inch, $23.

TINPLATES—These are firm at the rise noted. Inquiry is active, but sellers are operating cautiously on forward business. We quote as follows: Coke, I. C., $4.00; charcoal, I. C., Allaway or Comet brands, $4.25; do. I. X., $4.50; Lincoln, $4; P. D. Crown, $4.75; do. I. X., $5.50; Bradley's, $6.25.

CANADA PLATES — The same remarks apply to this line, which have again advanced 10c. We quote: 52's, $2.40; 60's, $2.50; 75's, $2.60; full polished, $3.15; galvanized Canada plates, $4.25 for 52's.

TERNE PLATE—Firmly held and higher, with a fair demand at $7 to $7.25.

COIL CHAIN—Steady. We quote: No. 6, 10¾c.; No. 5, 9¼c.; No. 4, 8¼c., and No. 3, 7¼c. per lb.; ¼-inch, $6; 5-16, $4.75; ⅜, $4.25; 7-16, $4.10; ½, $4; 9-16, $3.95; ⅝, $3.85; ¾, $3.65, and ⅞, $3.55 per 100 lb.

SHEET ZINC — As last noted, at 7½ to 7¾c.

ANTIMONY—Unchanged, at 10 to 11c.

SPELTER—Continues firm, but unchanged, at $7.

GLASS.

There is a moderate business, and values all around are steadily held. We quote: First break, $1.90; second, $2 for 50 feet; first break, 100 feet, $3.60; second, $3.80; third, $4.25; fourth, $4.50; fifth, $5; sixth, $5.50, and seventh, $6.

PAINTS AND OILS.

Business is quiet, but values all round are steadily held.

WHITE LEAD—Best brands, Government standard, $6.00; No. 1, $5.62½; No. 2, $5.25; No. 3, $4.87½.

DRY WHITE LEAD—$4.75 in casks; kegs, $5.

RED LEAD—Firm; casks, $4.75; in kegs, $4.50.

WHITE ZINC PAINT—Pure, 8c.; No. 1, 6½c.; in oil, pure, 9c.; No. 1, 7½c.

PUTTY –We quote: Bulk, $1.65; bladders, in bbls., $1.80; bladders, in cases, $1.95; in tins, $2.05 to $2.30.

LINSEED OIL — Raw, 57c.; boiled, 58c., five to nine-barrels, 1c. less, ten and twenty-barrel lots open, net cash, plus 2c. for 4 months. Delivered anywhere in Ontario between Montreal and Oshawa at 1c. per gallon advance and freight allowed.

TURPENTINE—One to four barrels, 63 to 64c., two to four-barrel lots, 1c. less, five barrels and over, open terms, the same terms as linseed oil.

MIXED PAINTS—Firm; $1 to $1.20 per gallon.

CASTOR OIL—Firm; 7½ to 8c.

SEAL OIL—35½ to 37½c.

COD OIL—35 to 37½c.

NAVAL STORES—Fair demand for all lines, and prices show no change. Resins, $2.75 to $4.50, as to brand; coal tar, $3 to $3.50; cotton waste, 4½ to 5½c. for colored, and 6 to 7½c. for white; oakum, 5½ to 6½c., and cotton oakum, 9 to 11c.

PARIS GREEN—250-lb. casks, 13½c.; 50-lb. drums, 14c.; 1-lb. packages, 15c.; ½-lb. packages, 16½c.; 1-lb. tins, 15½c.

PETROLEUM.

Trade is quiet and steady. We quote: Crown, Acme, the new Sarnia oil, 15½c.; Perfection and Silver Star Canadian refined, 14½c.; American prime white, 17c.; water white, 18c., and Pratt's astral, 19½c., in small quantities.

HIDES.

Lambskins have advanced 10c., and are now quoted at 40c. Beef hides are unchanged at 9, 8 and 7c., while calfskins are 11 and 9c.

COAL.

There is a probability that all grades of coal will be scarce before the end of the season and the market is adopting a much firmer tone. We quote: Stove, $5.75; chestnut, $5.75; egg, $5.50; Scotch grate, $6; Scotch steam, $4 to $4.50; Tower ports steam, $3.50 to $3.75.

Flat head screws have been advanced 2½ per cent.

Revolvers are 10 per cent higher all around in price.

Quotations on hammers were withdrawn by makers this week.

A round lot of English cement sold at $2.35 ex wharf this week.

Sleigh bells have been marked up 15 per cent. over previous prices.

ONTARIO MARKETS.

TORONTO, August 4, 1899.

HARDWARE.

BUSINESS is, on the whole, quiet, and quieter than it was a week ago. This is what is to be expected at this time of the year, especially when so many of the travelers are taking their holidays. Still, for this time of the year, a good business is being done. The tendency of values is still upwards. Round head bright wood screws have been advanced about 14 per cent. Sad irons are quoted 2½ to 5c. higher. The manufacturers of cast hardware in the United States have advanced their quotations again. Wrought hooks and staples and wrought hasps and staples are dearer. Stamped fire shovels, "Acme" fry pans, revolvers, stove dampers and petroleum faucets are all quoted higher. The demand for wire nails is fair, and for cut nails it is quiet. A fair business is being done in hay-baling wire, but in other kinds of wire the demand s light. Screws are still in active demand. Bolts are selling well, particularly stove bolts. Business is fair in rivets and burrs.

BARBED WIRE—Business is quiet with prices firm and unchanged at $3.25 f.o.b. Toronto.

SMOOTH STEEL WIRE—The demand is fairly good for hay-baling wire, but oiled and annealed is quiet. Prices are unchanged, the base figure still being $2.85 f.o.b. factory.

GALVANIZED WIRE—The demand is only moderate. Prices are firm and unchanged. We quote: Nos. 6, 7, 8 gauge $3.40; No. 9, $2.90; No. 10, $3.50; No. 11, $3.55; No. 12, $3.05; No. 13, $3.15; No. 14, $3.90; No. 15, $4.50; No. 16, $4.65.

WIRE NAILS—The demand is much the same as a week ago, namely, of a sorting-up nature. The base price is unchanged at $2.75 f.o.b. Toronto.

CUT NAILS—Business is quiet, and the base price unchanged at $2.25 f.o.b. Toronto, Hamilton and London.

HORSE NAILS—Trade is still quiet. We quote: Standard, oval head, 50 per cent.; Acadia, countersunk head, 50 and 20 per cent.

HORSESHOES — No new features have developed, either in regard to prices or business. We quote as follows: f.o.b. Toronto, Hamilton, London and Guelph: No. 2 and larger, light, medium and heavy iron shoes, $3.60; snow shoes, $3.85; light steel shoes, $4.00; featherweight shoes, all sizes, $5.25. No. 1 and smaller, light, medium and heavy iron shoes, $3.85 per keg; iron snow shoes, $4.20; light steel shoes, $4.15; featherweight steel shoes, all sizes, $5.25.

SCREWS—The feature of the screw trade this week is an advance of about 14 per cent. in the price of round head bright screws, the discount on which is 80 and 5, instead of 82½ and 5 per cent. The screw trade continues brisk. We quote: Flat head bright, 80 and 5 per cent. off the list; round head bright, 75 and 5 per cent.; flat head brass, 75 and 5 per cent.; round head brass, 67½ and 5 per cent.; flat head bronze, 67½ and 5 per cent.; round head bronze, 62½ and 5 per cent.

BOLTS—Trade is still active, particularly in stove bolts. We quote as follows: Norway bolts, full square, 65 per cent.; common carriage bolts, 5-16 and under, 55 per cent.; ditto, ⅜ and larger, 50 per cent.; ditto, full square, 65 per cent.; machine bolts, all sizes, 55 per cent.; coach screws, 67½ per cent.; sleighshoe bolts, 72½ per cent.; blank bolts, 55 per cent.; bolt ends, 62½ per cent.; nuts, square, 3¾c.; nuts, hexagon, 4¼c.; tapping nuts, 60 per cent.; tire bolts, 60 and 10 per cent.; stove bolts, 60 and 10 per cent.

RIVETS AND BURRS — A fair trade is still to be noted at unchanged prices. We quote as follows: Carriage section, wagon box rivets, etc. (steel), 60 per cent. off the list; ditto (Norway iron), 55 per cent.; black M rivets, (steel) 60 per cent.; ditto (Norway iron), 45 per cent.; iron burrs, 40 per cent.; copper rivets, 35 per cent.; bifurcated, with box, $1.25; coppered iron rivets and burrs, in 5-lb. carton boxes, 30c. per lb.

ROPE—Prices are firm and unchanged. The demand is light. We quote: Sisal, 7-16 in. and larger, 10½c. per lb.; ⅜ in., 11c.; ¼ and 5-16 in., 11½c. Manila, 7-16 in. and larger, 12c. per lb.; ⅜ in., 12½c.; ¼ and 5-16 in., 13c.; New Zealand, 9½c. per lb.; Deep sea line, 13½c. for water laid, and 14½c. for machine-made; hemp, 7 to 9c.; lath yarn, 8¾c. Clotheslines, 48 feet, 90c.; 60 feet, $1.20; 72 feet, $1.50; 100 feet, $2.

CHURNS — Business is quiet. We quote: Metal frame—No. 0, $3; No. 1, $3.20; No. 2, $3.40; No. 3, $3.75; No. 4, $4.50; No. 5, $5.90. The price of wooden frames is 15c. per churn less than the above. Terms, 3 per cent. off 30 day f.o.b. Toronto.

WRINGERS — Very little doing. We quote as follows: "Leader," $60 per doz.; "Royal Canadian," $58; "Royal American," $48. Prices are all f. o. b. Toronto, Hamilton, Brockville, and Montreal. Discount, 45 per cent. Terms, four months, or 3 per cent., 30 days.

BUILDING PAPER—Trade is quiet and featureless. We quote: Plain building, 28c. per roll; tarred lining, 35c., according to quality; tarred roofing felt, $1.40 per 100 lb.; carpet felt, $2.25 per 100 lb.

CEMENT— Trade continues good. Prices are unaltered. We quote in barrel lots: Canadian Portland, $2.65 to $2.90; English do., $3; German do., $3.10; Belgian do., $2.70; Canadian hydraulic cements, $1 to $1.10; calcined plaster, $1.90; asbestos cement, $2.50 per bbl.

SPORTING GOODS—There is not much doing, repeat orders not having yet begun to come in. Revolvers of all kinds have recently been advanced 40 to 50c. each.

CUTLERY—There is not a great deal being done. The outlook for the fall trade is considered good, both for foreign and domestic-made cutlery. Difficulty is being experienced in getting delivery of both English and German cutlery. German goods ordered in November last were only delivered a few weeks ago.

SAD IRONS—Prices have been advanced 2½ to 5c., and we now quote Mrs. Potts, 70c. per set, and nickle plated at 85c. per set.

FIRE PANS AND FIRE SHOVELS—Stamped fire shovels and "Acme" fry pans of United States make are about 33⅓ per cent. dearer.

HOOKS AND STAPLES, ETC-—Wrought hooks and staples and wrought hasps and staples have been advanced about 25 per cent.

AXES—The axemakers in the United States have advanced prices. The cheapest first quality axe now being quoted in the United States market is $5.50. This, with the duty added, would mean about $6.90 per doz. in Canada. The Canadian makers have advanced their prices 50c. to $1 per box.

STOVE PIPE DAMPERS—Cast iron stove pipe dampers have been advanced in price, and we now quote: 6-inch, $9 per gross; 7-inch, $12 per gross.

FAUCETS—Petroleum faucets have been advanced 25 per cent. in the American market. The makers of tinned key faucets have notified the trade of an advance of 10 per cent. in prices.

METALS.

Prices are still tending upwards in metals, and a fairly good trade is being done. Our quotations have been again advanced on pig tin, tinplates, and solder.

PIG IRON—The market continues strong and active at $21 f.o.b. the furnace for Hamilton iron.

BAR IRON—Business continues brisk and the base price firm and unchanged at $2.

BLACK SHEETS—Trade is fair, having improved the past week. Prices are unchanged, 28 gauge being quoted at $3.10.

GALVANIZED IRON—Stocks of galvanized iron on spot are lower than they have been for years, and jobbers are unable to fill all orders. We still quote 28 gauge at $5 per 100 lb.

COPPER—Business has improved in ingot copper during the week, and is now accounted good. Trade is also fairly good in sheet copper. There appears to be an easier feeling in the copper market. The big manufacturers are overtaking their orders, and, in some cases, are accumulating small stocks. Local quotations are unchanged, ingot being 20 to 21c. per lb. and sheet 23 to 23½c. per lb.

PIG TIN—Although easier during the last couple of days the primary markets are a great deal higher than a week ago, and our local quotations are 1c. per lb. higher, at 37c. The demand is good, having improved during the week.

TINPLATES —Some of the brands show a further advance of 25c. per box, while others are unchanged.

TINNED SHEETS—Prices are higher, and we now quote: 24 gauge, 7 to 7½c.; 26, 7½ to 8c., and 28, 8 to 8½c.

CANADA PLATES —The demand, which for some time has been poor, is now fairly active. We quote: All-dull, $2.75; half-polished, $2.85; all-bright, $3.20.

IRON PIPE — Trade continues active, and prices firm and unchanged. Quotations on black pipe are as follows: ¼ to ⅜ inch, $3.35; ½ inch, $3.40; ¾ inch, $4; 1 inch, $5.50; 1¼ inch, $7.35; 1½ inch, $9.25; 2 inch, $12.50; 2½ to 6 inch, discount off the list 45 per cent. Galvanized pipe is quoted as follows: ½ inch, $6.50; ¾ inch, $8; 1 inch, $11; 1¼ inch, $15.25; 1½ inch, $19; 2 inch, $27.

PIG LEAD—The demand is fairly good. Prices are steady. We quote: 4½ to 4¾c. per lb.

LEAD PIPE—Trade is dull. We quote: Ordinary pipe, 7c.; waste, 7¼c. Discount, 20 per cent.

RANGE BOILERS — A good trade is still to be noted. We quote as follows: Galvanized, 30 gals., $9; 35 gal., $10; 40 gal., $11. Copper, 30 gal., $22; 35 gal., $26; 40 gal., $30; discount off copper boilers, 10 per cent.

SHEET ZINC—Trade is quiet at 8¼ to 8½c. for cask and smaller quantities respectively.

SPELTER—Business is rather better than it was. We quote 7½ to 7¾c. per lb.

SOLDER—Prices have advanced in sympathy with tin. We quote: 21 to 22c. for half-and-half; 20 to 21c. for refined, and 18 to 19c. for wiping.

ANTIMONY — Trade is still quiet and featureless at 11 to 11½c. for Cookson's.

SOIL PIPE—Trade is fair. Discount, 50 and 10 per cent.

CAUSES OF FAILURE

In the Hardware Trade and How Avoided.

As long as there are failures, subjects that furnish information how to prevent them will always be timely. We have published, in pamphlet form, three admirable papers on the above topic, in which Over-Stocking, Expense, Capital, Credit, Discounts, Buying, etc., etc., are ably discussed. We will mail the whole three essays to any address on receipt of 10 cents

HARDWARE AND METAL, Toronto

PAINTS AND OILS.

The volume of business being done is unusually good for August. There is a good demand for all materials, except paris green, which is stagnant. Buyers who have waited for a decline in turpentine are now buying freely, as it is generally recognized that prices will not go lower. The tendency at present is upwards, an advance of 3c. being noted this week. Linseed oil is steady. White lead is firm, as are all sundries. The Sherwin-Williams paints have been advanced 10c. in price, because of the rise in the price of materials. They are now quoted at $1.30 per gal. We quote:

WHITE LEAD—Ex Toronto, pure white lead, $6.12½; No. 1, $5.75; No. 2, $5.37½; No. 3, $5; No. 4, $4.62½; dry white lead in casks, $5.10.

RED LEAD—Genuine, in casks of 560 lb., $4.90 to $5; ditto, in kegs of 100 lb., $5.15 to $5.50; No. 1, in casks of 560 lb., $4.75; ditto, kegs of 100 lb., $5.

LITHARGE AND ORANGE MINERAL—Litharge, 6 to 6½c.; orange mineral, 7½ to 8½c.

WHITE ZINC—Genuine, French V.M., in casks, $7 to $7.25 ; Lehigh, in casks, $6.

PARIS WHITE—90c.

WHITING — 55c. per 100 lb.; Gilders' whiting, 85c.

GUM SHELLAC—In cases, 24c.

PLASTER PARIS — Ordinary, $1.75 per barrel ; New Brunswick, $2 to $2.20 per barrel.

PUMICE STONE—Powdered, $2.50 per cwt. in barrels, and 4 to 5c. per lb. in less quantity ; lump, 10c. in small lots, and 8c. in barrels.

LIQUID PAINTS—Pure, $1 per gallon; No. 1 quality, 90c. per gallon.

SEAL OIL—59 to 60c. per gallon, and yellow seal at 49 to 50c.

CASTOR OIL—East India, in cases, 9c. per lb. and 10c. for single tins.

LINSEED OIL — Outside western points (freight [illegible]

[illegible]

double diamond under 25 united inches, $6, Toronto Hamilton and London ; terms 4 months or 3 per cent. 30 days.

OLD MATERIAL.

There is a good demand. Deliveries are large. Prices are steady. We quote as follows : Agricultural scrap, 55c. per cwt. ; machinery cast, 60c. per cwt. ; stove cast scrap, 45c.; No 1 wrought scrap, 55c. per 100 lb.; new light scrap copper, 12½c. per lb.; bottoms, 11c. ; heavy copper, 15c.; light scrap brass, 7½c.; heavy yellow scrap brass, 10c.; heavy red scrap brass, 11c.; scrap lead, 2½c.; zinc, 3c ; scrap rubber, 4c.; good country mixed rags, 65 to 75c.; clean dry bones, 45 to 50c per 100 lb.

BRITISH PLATE GLASS COMPANY, Limited. Established 1773.

Manufacturers of **Polished, Silvered, Bevelled Chequered, and Rough Plate Glass.** Also of a durable, highly-polished material called **"MARBLETTE,"** suitable for Advertising Tablets, Signs, Facias, Direction Plates, Clock Faces, Mural Tablets, Tombstones, etc. This is supplied plain, embossed, or with incised gilt letters. **Benders, Embossers, Brilliant Cutters, etc., etc.** Estimates and Designs on application.

Works : Ravenhead, St. Helens, Lancashire. Agencies : 107 Cannon Street, London, E.C.—128 Hope Street, Glasgow 12 East Parade, Leeds, and 36 Paradise Street, Birmingham. Telegraphic Address : "Glass, St. Helens." Telephone No. 68 St Helens.

COAL.

The July prices are to be continued for August deliveries. A good demand is noted. We quote : Anthracite for July delivery at Buffalo and bridges : Egg, stove and nut, $4.50 per gross ton, or $4.01 per net ton ; grate, $4.25 per gross ton or $3.79 per net ton.

PETROLEUM.

A steady improvement in the demand is noted. Prices are steady. We quote in barrels, Toronto, as follows : Canadian, 14c. ; Sarnia prime white, 14c. ; Sarnia water white, 15c. ; photogene, 15½c. ; American water white, 16½c. ; Pratt's astral, 18c.

MARKET NOTES.

Turpentine is 3c. per gal. higher.

Pig tin is 1c. per lb. higher at 37c.

Solder is 1c. per lb. dearer than a week ago.

The Sherwin-Williams paints are up 10c. per gallon.

Some brands of tinplates have been advanced another 25c. per box.

H. S. Howland, Sons & Co. are in receipt of shipments of Butler's and Elliot's cutlery.

Round head bright screws are 14 per cent. dearer, the discount having been reduced to 80 and 5 per cent.

DEFENDING WORD "SHEFFIELD."

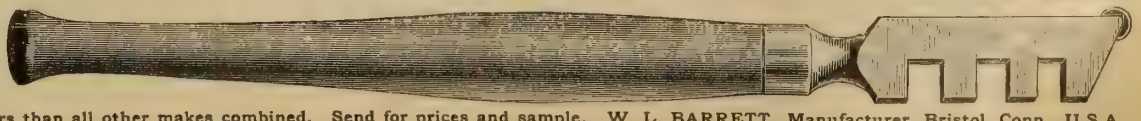
The fund which has been started in Sheffield to provide means for preventing the name of the town being piratically used by unscrupulous manufacturers does not seem to be making that headway which one would have liked to see. About £2,000 has been collected so far, but this has been subscribed by a comparatively limited number of firms. Some to whom the appeal has been directed ask why so large a sum as £5,000 is wanted, seeing that it is improbable that such an expenditure will ever be incurred. Others object to having to pay up whether the money is required or not. Would it not have answered every reasonable purpose to have invited subscriptions to a guarantee fund, and simply to have called on the guarantors to meet the costs of legal proceedings as they arose? I think that a more general response would have resulted if such a course had been adopted, or if the master cutler had issued an appeal to the trade at large.—Ironmonger.

MR. H. S. HOWLAND'S 75TH BIRTHDAY.

Mr. H. S. Howland, of H. S. Howland, Sons & Co., and president of the Imperial Bank, was 75 years of age on Wednesday last, August 2.

Mr. Howland was born in New York State, and came to Canada when 14 years of age, his brothers, William and Peleg, having preceded him. This was in 1837. When about 20 years of age, he began business for himself at Kleinburg, Ont., as flour and sawmill owner. The flour mill is still owned and operated by him.

He removed to Toronto with his family in 1864, and started the hardware firm of which he is now the head 22 years ago, having purchased the bankrupt stock of McGiverin, Kerrigan & Co. The active management of the business devolves upon his son, Mr. Peleg Howland.



Mr. Howland is a well-preserved man for his years, and the wish of his friends, that he may have "many happy returns of the day," has every likelihood of being gratified.

AGENTS FOR "RUBBEROID."

Lockerby & McComb have been appointed Canadian agents for "Rubberoid" roofing, a new line of ready roofing which is being used extensively in the United States, and has been used by the C. P. R. and G. T. R. "Rubberoid" is a very pliable paper that is not affected by either heat or cold, and is very suitable for our climate.

Barrett's Glass Cutters Standard

Barrett's Practical Glass Cutters are the standard the world over.

Sold by more Hardware Dealers than all other makes combined. Send for prices and sample. W. L. BARRETT, Manufacturer, Bristol, Conn., U.S.A.

ADVICE BY THE OLD MAN.

BARTHOLOMEW, said the Old Man, I have not been in business all these years with my eyes shut. I have learned a good deal, and I want you to bring lustre to the family name by showing the ability to add to your father's wealth.

A Pointer.—Now, Bartholomew, when you telephone to ask Rubenstein the price of saw rods, and he replies, don't say, "is that net?" Your very question will imply an answer in the affirmative. He will "catch on" at once and promptly answer, "yes." He will know instantly it is a fresh hand at buying, because no matter how low a price you get you should not give yourself away by your voice indicating you were well pleased. On the other hand, you must manifest surprise and ask him if he means 10 off.

Full Stock of Staples.—Then, Bartholomew, always keep well supplied with staples; don't allow yourself to be out of them. Some slow sellers you can afford to be out of, as you may not have a call once in six months, but tenpenny nails will be asked for two or three times in a day, and be sure you are always able to supply them.

Favorable Impressions.—It gives people the impression that you keep a large stock and they can always get what they want at your store.

About Competitors. — Another thing to remember is not to leave unopened packages of goods on the sidewalk in front of the door or in a conspicuous place in the shop where your competitor or his clerk will see what new goods you are getting in and from whom you buy them. You may think this a small matter, but it does no good to give points like these away to the public.

Star Chamber Secrets.—Draw the lines tight and keep your mouth closed regarding your business. Regard all your affairs as sacred secrets. Do not let your right hand know what your left hand does.

Keep Your Own Counsel.—If times are good and you are making money, keep the matter to yourself, and do not be so vain as to boast of your good luck. If times are bad and you meet with losses, it does no good to proclaim the fact broadcast. People will begin to think you are not very shrewd if you make mistakes and incur loss.

Cultivate Politeness.—And, Bartholomew, never forget that politeness is one of the most valuable acquisitions to your tools of business. Without it you court failure, but by its constant use you invite success. The most unlettered and coarse people are attracted by it. You will have many occasions when your temper will be sorely tried, but never allow your feelings to deter you from being polite. By so doing you will save dollars.—Iron Age.

IRON SITUATION IN THE UNITED STATES.

Iron Trade Review, August 3: "What appeared one week ago to be a lull in the buying movement was followed quickly by a renewal of activity, and plainer indications that the climax is still in the distance. * * * The inquiry of the past week, both for pig iron and finished forms, shows that many consumers will need material considerably in excess of calculations, and that the probabilities of shortages in the next five months are increasing rather than decreasing. Already, the difficulty of getting material is the prominent feature of the situation. Shipments of foundry and Bessemer irons are short of current requirements, and temporary shut-downs are inevitable in the case of a number of foundries, while steel works operations in the Central West have been interrupted because of short supply of iron. Another development of prime importance, emphasized in the past week, is the increased buying for delivery next year. Large concerns are covering at current prices for the early months of 1900. The shortages on Lake Superior ore shipments by water may be made up in part by all-rail shipments next winter, but this will be at a much higher freight rate, which will mean further advances in prices of pig iron. * * * The scarcity of steel promises to be more pronounced in the next four months."

A SIGNIFICANT FACT.

It is a significant fact the Alabama, with all the pressure upon her furnaces to deliver iron at home and to ship it abroad, actually produced 3,800 tons less in the first half of this year than in the second half of 1898, and only 6,000 tons more than in the first half of 1898. It is very plain that Southern furnaces are oversold for 1898 delivery, and that the additional capacity to be blown in in that section in the next three months will not be sufficient to make good the deficiency. —Iron Trade Review, July 27.

STEEL $1 PER TON HIGHER.

The market has been rather quiet in steel billets, and sales are confined almost entirely, in Bessemer, to material resold by consumers and middlemen. There are very few sellers. We advance quotations by $1 a ton this week, to $34.50 to $35 at mill. Slabs are a shade higher than billets. and sales have been made at $35, and even $36 is reported to have been paid. Some odd lots of wire rods have been sold to chain makers and others at $38. There is the greatest scarcity in the steel market, and some good sized lots could readily be sold for almost any delivery this year, could delivery be guaranteed, at full prices. Operations at steel works have been much hampered during the past week from an insufficiency of iron.—Iron Trade Review, Aug 3.

FOR YOUNG CANADIANS.

Don't wait until the iron's hot,
But make it hot by muscle.
Don't wait for the wealth your father's got,
Take off your coat and hustle.

What a year 1900 is to be! What a time for the young Canadian hustler—the rapid stenographer, the expert bookkeeper and the nimble telegrapher! They will all be wanted just as surely as that bright year is coming around. A start now will put you with the successful ones, and we can start you aright. Will you send us your name and let us tell you how? It is no trouble to us, and will benefit you.

W. H. SHAW, Prin.

CENTRAL BUSINESS COLLEGE, Toronto, Ont.

PIPE COUPLING.

AS ordinarily constructed, when the waste pipe of washstands, laundry tubs, urinals, etc., becomes clogged up, the only way to clean out the pipe is by cutting it, which necessitates the services of a plumber. The pipe-coupling patented by a Californian man, according to World's Progress, was specially designed to overcome this objection, which enables anyone to remove the trap, waste and vent pipes, so that they may be thoroughly cleaned. It is important from a sanitary standpoint that this be done sometimes, as it is frequently the case that diseases are contracted by negligence in this matter. This invention makes it possible for this to be conveniently done whenever necessary.

The patentable novelty of the improvement comprises a flange, a vertically extended screw threaded flange, a sliding collar with a shoulder, a second sliding collar comprising an abutment adapted to bear upon the shoulder, and an interiorly screw threaded rim whereby the joinder of the ends of the adjacent pipes is accomplished, the vertically extended flange being provided interiorally with a beveled bearing surface adapted to receive the flared edge of one of the pipes, and a gasket or packing between the the shoulder and the surface between the inner and the outer periphery of one of the pipes.

It is evident that this produces a coupling which will admit of an expeditious separation of the ends of the waste pipe when it passes through the wall or floor to facilitate cleansing, which, in the more common plumbing systems, requires the unsoldering of a joint or the breaking of a pipe in order to effectually remove the obstructing matter in case of stoppage by means of a force pump. This unsoldering and sawing of pipes is accomplished with much loss of time, and cannot be undertaken except by a skilled workman. It can also be applied to any form of pipe of equal dimensions in use, and will prove equally efficient in any connection.

HOW CANADIANS LOSE TRADE.

Some people wonder how it is that Canadians do not get more of the Boundary Country trade, especially when a corporation like the C. P. R. is transporting the goods.

Firms have shipped goods six and eight months ago, and they had not, up to a short time ago, arrived.

At Penticton, at the time I was there, no less than 18 carloads of goods, a warehouse full, were waiting to be forwarded.

Merchants in that country who had bought goods from Canadian dealers were forced to buy from American, who could or would give them a better delivery, while the goods they had already ordered were waylaid.

This not only means a loss to the Canadian dealer at present, but there will be a future loss as well, and the American is getting a start which he is likely to retain.

A firm in Vernon told me that they were losing about $1,000 worth of business a week by not being able to get their goods delivered. M.

THE METALLIC ROOFING CO., Limited

1179 King St. West, TORONTO.

TRADE WITH ATLIN AND BENNETT.

Perhaps it is only a coincidence, but business men do not call it so, that the shipments of merchandise to Skagway for Bennett and Atlin have largely increased in the past few days. The recent satisfactory returns from that much maligned district and the certainty of continued returns have had a decided effect in warming up interest, and, as a result, enterprise is at once being displayed in getting things under way for greatly extended business and mining operations in the Atlin country. To-day large shipments of provisions, groceries and general merchandise were shipped by leading local wholesale houses for the British America Corporation, Parsons Produce Company, McLennan, McFeely & Co., Thos. Dunn & Co., Limited, and others, who have established business there. From now on, shipments will be made much more freely than for some months past. Vancouver merchants are anticipating a good trade from the new northern district, and the prospect is giving an encouraging impetus to trade generally. There are some propositions for hydraulic machinery that will also develop a little later and cause heavy shipments to Atlin. —The Province, Vancouver.

CANADIAN PRODUCTS WANTED.

The following inquiries were received at the Canadian Government offices, London, during the week ending July 14:

A north of England firm desire to find a market in Canada for English and Scotch wools.

A firm in the Midlands are wanting to import, direct from Canada, cattle hides and other animal products, and wish to get into communication with suitable firms with a view to business.

An inquiry has been received from an important firm in the preserved provision line, who desire to appoint reliable houses to represent them in the Dominion.

An agent at Gothenburg, who is prepared to handle Canadian produce, especially flour and bacon—and who can work the whole of Sweden, desires to correspond with houses open to do business.

A gentleman in the north of England asks for the names of high-class firms who put up Canadian evaporated fruits.

Information in regard to any of the above sent to HARDWARE AND METAL Toronto, will be forwarded to the persons seeking the information.

MR. EDDY, OF HULL.

E. B. Eddy, the well-known paper manufacturer of Hull, Que., and Mrs. Eddy, are on their way to the Coast. Eddy is a character. He is a shrewd business man and possesses a strong sense of humor which crops out in the most unexpected places. Once when he was in Italy his works caught fire and the manager cabled him: "Factory on fire. Impossible to save it. What shall we do?" Eddy cabled back: "Let it burn."—The Province, Vancouver.

TRADE IN OTHER COUNTRIES THAN OUR OWN.

THE visible supply of copper in Europe, July 31, was 33,020 tons, against 28,500 tons on the 15th. The July deliveries were 16,300 tons.

The shipment of pig tin last month from England to the United States amounted to 1,265 tons, including 1,000 tons from London and 265 tons from Holland.

LINSEED OIL IN ENGLAND.

There has been a steadily-improving market for this article during the past six weeks, and prices have now reached a fair level. A rise from the lowest point touched (nearly two years ago), which was 12s. 6d. per cwt., has been in regular progress, but we are now at a point where the market may be expected to stay, unless something unexpected should happen. The upward movement lately has been very steady, prices increasing by 3d.'s from 17s. 6d. to 21s. Whether the expected formation of the trust known as The British Oil and Cake Mills, Limited, has had anything to do with the improvement, it would be difficult to say; we are rather disposed to attribute it to generally-improved conditions of trade. The trust, however, is now established, and includes some of our largest mills, with an aggregate capital of £2,500,000 sterling. The effect of the combination should be in the direction of steadying the market for the future, and preventing any disastrously low prices such as those witnessed in 1897; but at the present time there are too many crushing firms left outside, and should a struggle take place between them and the combine—as our American friends call it—we may yet see a drop. Taking all the circumstances into consideration, however, we do not think that it is unsafe to hold ordinary stocks of linseed oil for fair-trading purposes. The market is certainly not in a dangerous condition, and although we do not anticipate any great rise, we think that the risk of a serious fall is even slighter. —Ironmonger, July 22.

TINPLATES IN ENGLAND.

The market has been steady during the past week. Both tin and tinplate bars have advanced higher, and prices of the manufactured article look like being maintained for some time to come. The trade prospects are very bright, and orders are coming along from all quarters at the advanced prices. There is very good demand from the continent, and sales are reported at 15s. 6d. to 16s. basis I.C. 14x20, 112 sheets, 108 lb., according to specification for Bessemer cokes of good ordinary brands, some choice brands bringing 1½d. to 3d. over these prices. The Californian demand is not very large just at present, and for the special brands required for this market 15s. 3d. to 15s. 6d. has been paid. The oil-size trade is also rather quiet at present, buyers evidently having filled their immediate requirements, and preferring to hold their hands for the moment. There is a good inquiry for black plate in all its stages of manufacture, and a fair demand for ternes, but Canadas are not much asked for just now. —Ironmonger, July 22.

A NEW METAL.

A new metal, denominated "copper-steel," has been brought out in Paris. It is described as possessing a very high resistance, and can be forged like iron. It is manufactured by a process during which zinc or its alloys is employed for retaining a certain proportion of iron, nickel, or chromium in the form of oxide, and reducing and incorporating it in a state of fine division in the presence of furnace gases. A number of new alloys, it is stated, are thus obtained, and among them the metal referred to under the title designated.

GALVANIZED IRON IN ENGLAND.

The makers of galvanized sheet iron, who met at Birmingham recently, reported a very lively state of business. The Australian trade is more active now than it has been for years, and the East Indian and South American markets are again at their best. Buyers for the home trade are taking large quantities of sheets; the base price at Liverpool is now called £13.—Iron and Steel Trades Journal.

WARRANT STOCKS OF PIG IRON.

Following is the statement of the American Pig Iron Storage Warrant Co.:

	Tons.
Stock in yard July 20, 1899	45,900
Put in yard for 11 days ending July 31	None
Total	45,900
Withdrawn 11 days ending July 31, 1899	3,400
Net stock in yard July 31, 1899	42,500
Stock in yard July 31, 1898	244,400
Stock in yard July 31, 1897	232,500
Stock in yard July 31, 1896	125,600

NEW YORK METAL MARKETS.

COPPER — New business is at present rather slow. Producers are making no special effort, since their stock and current output is well under the control of orders, and, being well covered for the present near future, consumers and exporters are buying moderately. Here and there, moderate quantities of the cheaper variety of the metal came out from second hands, and, coupled with tame, not to say rather bearish, London advices, impart somewhat flat surface appearance here. Lake Superior ingot, however, is firm at 18½c., while 17⅝ to 17¾c. cover the extremes on electrolytic bars, etc., and 17⅜ to 17½c. those on casting stock.

PIG TIN—The arrival of a steamer with 650 tons has relieved the scarcity of spot stock in some degree. In connection with advices of a decline of about £1 17s. 6d. in London, this served to weaken values somewhat, but there was no evidence of unusual anxiety to sell in any quarter. Naturally consumers restricted their purchases as much as possible, instead of buying more freely on the decline, apparently with a view to bringing the weight of inaction upon the market. Values were very uncertain and difficult to quote with ordinary "official" inaccuracy, not to say fairly. Some spot stocks could have been secured at 32⅜c., although holders asked 32½c. as a rule, and lots ex ship in port, available about a week or 10 days hence, were within reach at 32c., or a shade less.

PIG LEAD—As far as reported, dealings were unimportant, individually and in total amount. The demand in this quarter was moderate also, but sufficient to make it clear that spot stocks are very moderate. Holders of the latter are firm at 4 60c. upward as a rule, but round lots for future shipment from the West may yet be secured at 4.55c. delivered here.

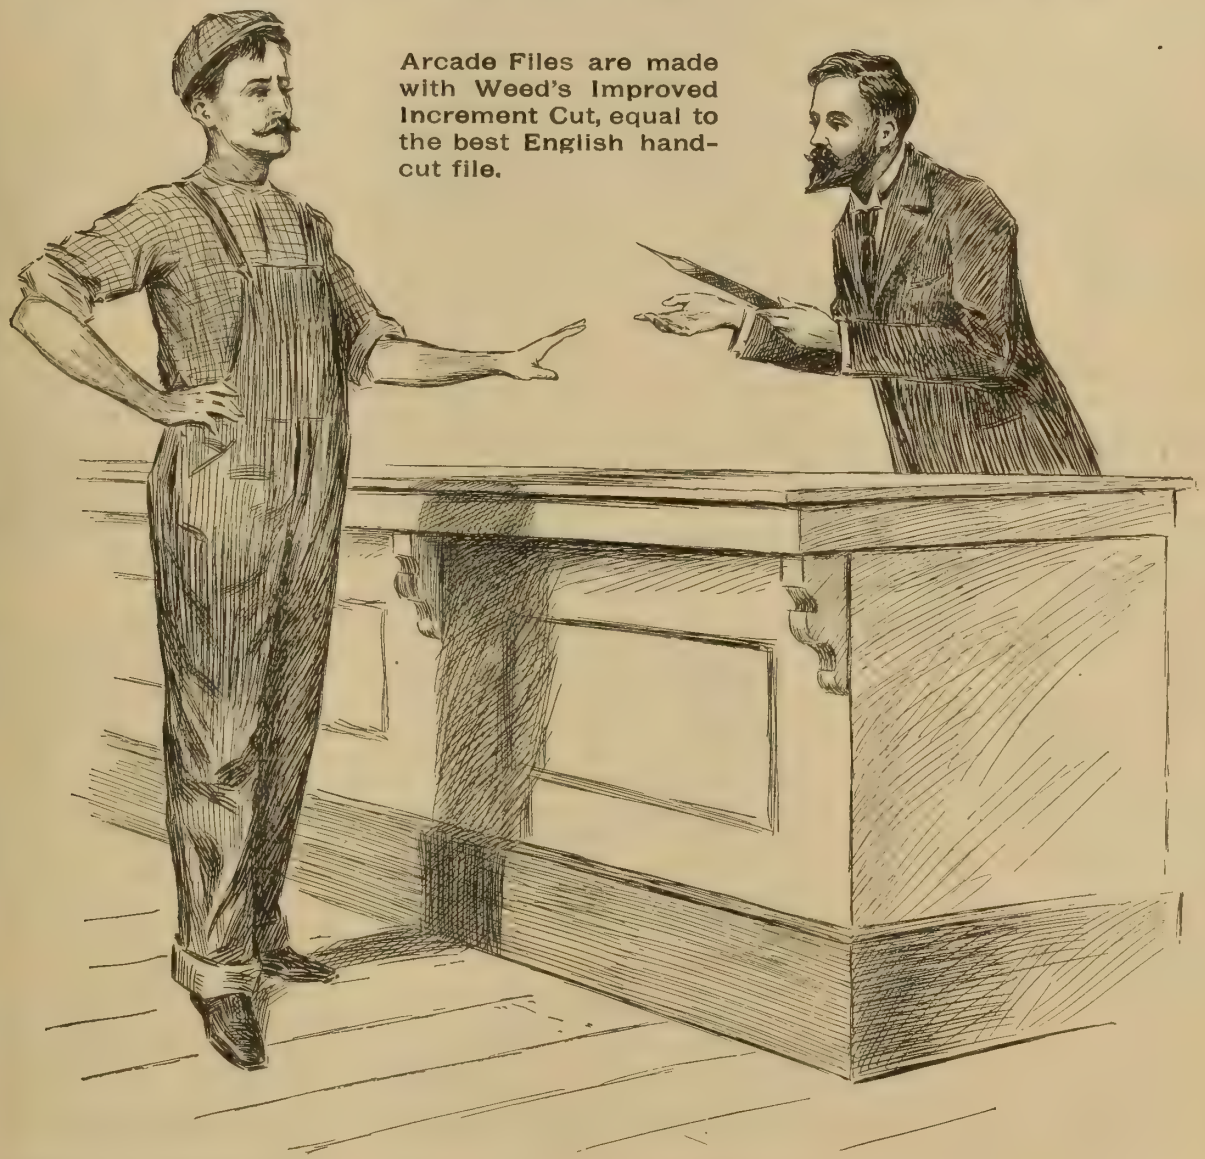
SPELTER—Ordinary carload business is about all that is being effected here, and advices from the West indicate rather slow trade there also. Values remain almost stationary, however, at about 6c. for spot stock, and 5.70 to 5.75 for future shipment, delivered here.

ANTIMONY—Regulus remains steady at 10 to 11c., but is selling rather slowly.

NICKEL—Sellers are quoting 32 to 36c. for ton lots, and 36 to 38c. for smaller quantities.

TINPLATE — Ordinary summer season store trade is about all that is reported here at present and the demand is represented as being tame. Prices remain very firm, however, since there is no anxiety for orders nor any decided cheapening of cost of materials.

IRON AND STEEL — A good business is being done in pig iron for delivery during the early part of next year, chiefly at about $19 at Pennsylvania and $15 at Alabama furnaces for No. 2 foundry. Considerably more could be effected were the price named trimmed somewhat, but furnace men stand out confidently and decline to make any concessions.



The demand for old material continues good, with stiff prices bid, but business here is hampered by the smallness of stocks in this vicinity.—N.Y. Journal of Commerce, Aug. 4.

HEATING AND PLUMBING

PLUMBING AND HEATING NOTES.

THERE is a great rush with brassfounders at present. All the foundries are working to their fullest capacity, and some of them positively refuse to accept new orders without, at least, several weeks' notice.

P. Leclerc & Fils, plumbers, Montreal, have dissolved.

A. C. Young has opened out as plumber in Dartmouth, N.S.

The Europe hotel, Vancouver, is to be considerably enlarged and improved.

A statement of the affairs of F. Duclos, plumber, Montreal, is being prepared.

J. W. Harris and family have gone for a two weeks' holiday, to St. Anne De Beaupre.

Wm. Blight, of Chatham, Ont., has the contract for remodeling and repairing the Ridgetown, Ont., Presbyterian church.

J. M. Robertson, manager for The Thos. Robertson Co., Limited, is spending a few weeks with his family at Long Island, Portland, Maine.

The Fairbanks Co., Montreal, have issued their 1899 valve catalogue. It is a book of 250 pages replete with illustrations. Anyone wishing it can get it by writing to the Montreal branch.

The Fairbanks Co. are now placing on the market, for the first time, a unique construction of gate valve, with removable bronze seat rings. This construction will stand the highest pressure and at the same time permits of packing the gland under pressure.

The building activity in Vancouver continues to increase rather than diminish, and contracts for new brick blocks and residences and sales of important city lots are weekly recorded. Many works of local improvement are also in hand; paved streets are being laid ; the waterworks system is being improved, and nearly $150,000 is being spent in extending and modernizing the electric street car service in and around Vancouver.

BUILDING ACTIVITY LESSENED.

The activity in taking out permits for buildings in Toronto, which was noted in March, April and May, was not continued during June and July. The contrary was the case, the value of permits issued in the latter months being $62,635 in June and $99,715 in July, as compared with $165,820 in June and $123,150 in July last year. This brings the total value of permits issued in the seven months of this year below the value of those issued last year, the figures being $989,815 this year and $1,028,735 last year.

NO PLUMBING SUPPLY TRUST.

The American Plumbing Supply & Lead Co., better known as The Plumbing Supply Trust, has been abandoned. Notices have been sent to subscribers to the securities of the company that they are released from their subscriptions. At the moment it is understood that there is no intention of reviving the scheme, although it is possible that another attempt may be made in the fall if conditions offer any encouragement.

The American Plumbing Supply & Lead Co., it will be recalled, was incorporated on April 24, with a capital of $35,000,000, of which $10,000,000 was to be in preferred stock and $25,000,000 in common stock. The promoters at one time had options on about 40 plants. Recently the soil pipe plants of several of these concerns have been consolidated as The Central Foundry Co., the particulars of the organization of which have been given in detail in these columns.

WASHOUT CLOSETS DEARER.

The Potters' Manufacturing Association, St. Johns, Que., have sent out circulars announcing advances in the price of most of their earthenware. Washout closets have advanced 50c., the plain now selling in crate lots at $4.40 in Montreal, $4.50 in Ottawa, Toronto, Hamilton and Quebec, $4.55 in London, and $4.60 in St. John, N.B., and Halifax.

Basins are now quoted at 60c. in St. Johns, Que., 62c. Montreal, or 65c. in other towns for the 14-in. round variety. The oval, 17 x 14 in., is $1.50 at St. Johns, $1.52 at Montreal and $1.55 at other towns.

MANUFACTURERS OF HOT-WATER BOILERS MEET.

The Canadian manufacturers of hot-water boilers held a meeting in Montreal last week, at which matters of importance to the trade were discussed. The following firms were represented : Gurney-Massey Co., Warden, King & Son, Star Iron Works, H. R. Ives and Co., Gurney-Tilden Co., Limited. All the members were satisfied with the present business outlook, and decided not to make any advance in prices for the present..

PLUMBING AND HEATING CONTRACTS.

E. C. Mount & Co., Montreal, have the contract for roofing six houses in Westmount.

Lessard & Harris, Montreal, are putting in Pedlar's metallic roofing and side walls in the following buildings : St. Mary's College, Theatre Francais, Atlantic Gardens.

A. Joss, Sarnia, has the contract for plumbing a residence for Albert Johnston, at Christina and Johnston streets, Sarnia, and for a residence for Mr. Le Sueur, at Vidal and Charlotte streets, Sarnia.

Carrol Bros., Montreal, have the contract for plumbing and heating S. S. Bains' new house at Verdun ; also for heating a house on Luke street, for Mr. Saxe, the architect.

Blouin, Delfosse & Latourelle, Montreal, have the following new contracts: For heating a house for Chas. Garth, 60 St. Denis street ; for heating a greenhouse for the Brothers of Charity, Demontigny street ; for plumbing three houses on City Hill, and for roofing and heating a dwelling for the Good Shepherd, St. Martin.

TORONTO BUILDING PERMITS.

Building permits have been issued in Toronto to F. B. Poucher, for two semi-detached brick residences on the west side of Parliament street, near Duke street ; to Noah L. Piper & Son, for alterations and addition to their four-storey warehouse on the north-west corner of Windsor and Front streets, to cost $1,800 ; to C. E. Coatsworth, for a two-storey attic and basement store and dwelling at 231½ Wilton avenue, near Parliament street, to cost $1,600 ; to David Elliott, for a two-storey brick addition to Nos. 74, 76 and 78 Nelson street, to cost $3,000 ; to J. Sutherland, for a two-storey brick residence on Sumach street, near Sydenham street, to cost $1,000 ; to Daniel Whetstone, for a two-storey brick store and dwelling at 397 Brock avenue, to cost $2,500, and to J. O. Patterson, for a pair of three-storey and attic stores and two dwellings, on St. Patrick street.

CONTRACTS CALLED FOR.

Tenders are asked for plumbing, roofing, heating and lighting a house for P. Beaubien, at Outremont.

Tenders are being called for the plumbing of 24 houses for A. Valiers, the grocer, Montreal.

SEND for specimen copy of Phillips' Monthly Machinery Register, containing over 5,000 entries of new and second-hand machinery of every description. NEW YORK TIRE CO. - - Toronto, Ont.

"HOGGISHNESS" IS CATCHING.

The following is an extract from an address before the recent convention of the Michigan Hardware Dealers' Association;

"If one hardwareman in a town is a hog, it will require a good deal of moral courage in the others not to become inoculated with his complaint. The department store is simply an aggravated case of hog, and so more or less, is the dry goods store that sells silverware, and the jewelry store that sells stationery, the bookstore that sells bicycles, etc., and you will notice these days that the hardware store is in great danger of being inoculated with their complaint. Speaking at this time of year 'when the sweet potato whistles to its mate in the mountain pass,' as Horace Greeley used to say, I say that hurry is the bane of our life, for worry always goes with it. You know what locomotor ataxia is, and I want to say that locomotor attacks us when we live under too high pressure, and the hurrier is its first victim. What are you going to do about it? You read in the paper that Americans are living too fast and do not want to take rest enough. That sounds very true to you, and you make up your mind, especially at this time of the year when the grasshopper is a burden, that you will run off half an hour or so earlier to supper and stay half an hour longer at noon, and after a while some customer will come in and say: 'Well, it seems to me you don't give much time to your business nowadays. I've been in here a dozen times to see you, and you were always out.'

"It is a conspiracy to keep you everlastingly at it, as the newspapermen say about advertising, but don't you mind—at least, not at this time of the year, when 'down in the meadows the violets are blooming,' and there are angle worms to be dug—keep it up, get away from the artificial, enjoy the natural."

ELECTRICITY FOR BOUNDARY.

Great things are expected from the motor power, which is being conserved at the Cascade Falls on the Kettle river below Grand Forks, according to a British Columbia paper. The work on the dam, to develop 5,000 horse-power is in progress. The dam as projected will be three feet high and 400 feet long, the work is about half done and it will take six months more to finish it. The intention is to develop and transmit electrical power for all the mines in the Boundary country. The flume is to be one-quarter of a mile long, 600 feet of which will be in the nature of a tunnel through solid rock. The power house will be a solid structure of stone and brick at the foot of the falls. The poles for the electric current are already erected to Wellington camp.

Skipping Ropes, Jute, Hemp and Flax Twines.

MUSHROOM BRUSHMAKERS.

It would be interesting to learn what has become of the number of **Mushroom Brushmakers** who have of late years come and gone like the "Ships that pass in the night." They make their appearance, flooding the market with a lot of **inferior goods, demoralizing trade,** and then disappear —usually sadder but wiser for their experience. Notwithstanding this they still spring up like the proverbial mushroom and with sublime assurance call themselves Brush Manufacturers.

Real Brushmaking requires a **technical knowledge** gained only by **years of experience,** and a safe rule to follow is to **buy your Brushes** from **old-established manufacturers** who are in the business to **stay.**

An idea of what real Brushmaking means may be gained from our catalogue of goods showing the large variety of qualities and sizes required to meet the demands of the public. Every dealer of experience knows that he must have a large assortment of brushes for his customers to choose from, as what will suit one will not suit another.

Our works have been established in Toronto for **over 43 years,** we have a **personal knowledge** of every detail of manufacturing Brushes, **our employees** are **thoroughly experienced** in their various departments, we have **ample capital for the requirements of our business,** and through **long years** of **practical buying** in the **world's best markets** we are in a position to secure the **highest possible value** in our **raw materials.**

We therefore **caution the trade** not to be **misled** by high-sounding claims of **Mushroom Brushmakers** and **accumulate a lot of stock** which is **not suited** to the **demands of the trade** and which they may have to dispose of at a loss later on.

Every Brush we turn out **we guarantee** to be **exactly as represented** and our name and brand is a **guarantee to all dealers** handling them.

MONTREAL and TORONTO.

A NEW STEEL WIRE ENTERPRISE.

Reports from Worcester, Mass., state that a new steel wire company is being organized, which will be operated independently of the trust. Herbert Smith, who left the plant of the American company to take charge of a large wire company in Birmingham, England, and Frank F. Bullard, who has charge of The Morgan Company plant at Barber's Crossing, are said to be in the scheme. Both were experts in the old Washburn & Moen plant. Charles H. Morgan, head of The Morgan Company, is also reported to be interested.

The new enterprise is said to have resulted partly from the fact that the American Steel and Wire Company transferred its funds in Worcester to New York and Chicago.

WORLD'S MEET NEWS.

All delegates attending the World's Meet to be held in Montreal next week, from August 7 to 12, will have an opportunity of procuring a Victor acetylene bicycle lamp from any of the bicycle dealers at the present price of $2 each. This is for one week only. The by-laws of several cities prohibit bicyclists to ride on the streets after dark without a lamp, consequently, the manufacturers of the Victor intend that delegates to the Meet shall have a good acetylene gas lamp at a low price. They are prepared to supply 1,000 lamps from their Montreal stock.

UNITED STATES PATENTS.

From the recent report of the United States Commissioner of Patents, it appears there were received in the last fiscal year 35,352 applications for mechanical patents, 2,292 applications for designs, 91 applications for reissue, 1,610 caveats, 1,861 applications for trade marks, 612 applications for labels, and 112 applications for prints. There were 23,550 patents granted, including reissues and designs; 1,406 trade marks, 372 labels, and 76 prints were registered. The number of patents that expired was 16,670. The number of allowed applications which were, by operation of law, forfeited for nonpayment of the final fees was 4,021. The total receipts of the office were $1,209,554.88, the total expenditures were $1,148,663.48, and the surplus of receipts over expenditures, being the amount turned into the treasury, was $60,891.40.

On June 27, 1899, every examiner had his new work within one month of date of filing, and his amended work within 15 days of date. This is the first time since December, 1898, when the present form of weekly reports were adopted, that such a report has or could have been made.

This information was received through Marion & Marion, patent solicitors, Montreal.

LACQUER FOR BRASS WIRE.

Gold lacquer for improving the natural color of brass wire is, according to Central Zeitung, prepared from 16 parts of gum lac, 4 parts of dragon's blood, and 1 part of curcuma powder, dissolved in 320 parts of spirits of wine in the warm, and well filtered. The goods must be thoroughly cleaned by burning, grinding, or turning either dull or burnished, and then coated with a thin layar of the above mixture, applied with a soft hair brush or a pad of wadding. In the case of colored articles, the lacquer must be laid on by stippling. Should the color be too dark, it may be lightened by reduction with a little spirit until the correct shade is obtained. The most suitable temperature for the metal during the operation is about the the heat of the hand ; if too hot or too cold, the lacquer may smear, and will then have to be washed off with spirit or hot potash lye, the article being dried in sawdust or recleaned as at first, before applying the lacquer again. Circular articles may be fixed in the lathe and the lacquer laid on with a wadding pad. To color brassware a solution of 30 parts caustic soda, 10 parts cupric carbonate, 200 parts water (or 200 parts ammonia neutralized by acetic acid), 100 parts verdigris, and 60 parts sal-ammoniac, is employed into which the warmed articles are dipped. After drying they are coated with colorless shellac varnish.

...BRADSTREET'S...

Capital and Surplus, $1,500,000. **Offices throughout the civilized world.**

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying, and promulgating information, no effort is spared and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world. Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by respectable and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its Offices. **Correspondence invited.**

Dominion Pattern

Cow Tie AND Stall Fixture

The special features of the tie and stall fixture are well shown in the illustration. As will be noticed the chain is very short which prevents all danger of entanglement with the animal's foot. At the same time the form of the fixture is such that great freedom is allowed to the head. Because of the short chain this tie is much cheaper than the ordinary patterns.

The stall fixture is made from a tough quality of steel and is very strong. Also, owing to its circular cross-section, it is exceedingly rigid. Its simplicity, convenience, cheapness, and ease of attaching make it very popular with cow tie users.

This form of tie and stall fixture are sometimes called Niagara pattern.

American or Flat Link Chain,

for years the standard cow tie chain in "the States," is now rapidly coming in favor in Canada. Its short link, handsome appearance and smooth surface—which cannot injure the animal's neck—make it superior to all other styles of chain for cow ties.

For sale by all Jobbers; manufactured by

Always Ahead

"Queen's Head" Iron always leads in sales, because the intelligent buyer knows that he can rely on it **every time**, and the price, if not the lowest, is at least the best that can be quoted for such a quality.

JOHN LYSAGHT, Limited

BRISTOL, ENG. MONTREAL.

Contractors Make Money

when they install the Safford Patent Radiators for hot water and steam heating. And they make *good* money, too. The Dollars and Cents profit is only part of it—the customer's satisfaction and good-will is the other half.

A leaky radiator will injure the business and the reputation of the best contractor in the world—the Safford Radiator is literally "always as tight as a drum." **It has screwed nipple connections.**

Toronto's City Hall and Court House are fitted throughout with Radiators made by the largest manufacturers of Radiators under the British Flag—

The Safford Radiators.

How to Make a Hot-water Heater

out of an ordinary stove or furnace.

The accompanying cut shows the Patent Bigley Water Heater, made in 7 sizes, from 12 to 28 inches in diameter. Manufactured from cast iron, and put together with wrought iron nipples. Tested to 150 lbs. pressure. It does not interfere with the heating capacity of a stove or furnace, but adds 50 per cent. to it. Saves one-third in fuel.

Capacities Guaranteed.

JAMES PENDER & CO., Limited, Sole Mfrs. **Saint John, N. B., Canada.**

Kemp's New Patent Steam Cereal Cooker.

A simple, inexpensive kitchen convenience.

Useful in one hundred ways. . . . . .

In cereals cooked by this method the kernels are expanded by the steam circulating over them, making them tender, delicate, delicious, and readily digestible.

Made in Diamond and Granite Enameled Steel Ware and Retinned Ware.

Kemp Manufacturing Co., ...Toronto, Canada.

THE PRICE-CUTTING EVIL.

IT is the height of folly for merchants, either wholesalers or retailers, to cut prices. When at stocktaking, or any other time, there is a line of goods or the balance of a line of goods which promises to remain on the shelves, a merchant is warranted in reducing his figures to a price which will induce its sale. Indeed, it is the wisest thing he can do. But that is not cutting prices. It is only putting the market price on the goods, for the market price of an article is the figure at which it can be sold, whether the reduction made to reach that condition be 10 or 50 per cent.

Cutting prices is marking the selling price below the market value.

Grocers sell sugar, hardwaremen nails, drygoodsmen cottons at or below cost when the condition of the market demands that they should do otherwise.

But the trouble is that it is not the condition of the market that is their chart or compass.

It is the selfish desire to do all the business themselves and compel their competitors to go out of business.

The result is not only bad feeling, but bad profits for all concerned. You cannot plant thorns and produce grapes.

Instead of cutting prices to get business it would be infinitely better if merchants, both wholesalers and retailers, would stand together for better prices.

It is not necessary to have elaborate machinery for doing this. All that is wanted is that there shall be an understanding as to the margin of the selling price above the buying price.

Such an agreement would not make competition any the less; but it would prevent or diminish illegitimate competition.

Competition proper is the life of trade, for it brightens and sharpens business and induces improved methods therein. It is competition improper, like cutting prices, which kills business.

COULD NOT ACCEPT THE BUSINESS

A manufacturer in Canada, whose raw material is sheet steel, desires to place an order with a mill in the United States for his next year's supply. The latter, however, refused to entertain the order, (1) because it was already unusually busy, and (2) because it could not get raw material.

THE TURPENTINE SITUATION.

TURPENTINE is in an excited condition at primary points owing to speculative activity induced by strong probability of a short crop this season.

As a result of this excitement, Savannah advices state that the contracts already made on August account amount to 30,000 barrels, and that the estimated receipts for the entire month only amount to 34,000 barrels, which only leaves the small margin of 4,000 to meet current wants between now and the end of the month. In fact, there are little or no free spirits offering at primary points, and, lately, bids of 45c. for round lots of 1,000 barrels for September delivery were turned down at Savannah, as nearly all the goods in sight were wanted for existing contracts.

At present the stock on hand at primary points is about the same as last year, namely, 22,344 against 20,212 in 1898. The receipts to date, at Savannah, however, are away behind those of 1898, being 165,218, against 197,986 in the year named.

The movement so far this season has been behind that of last year, being in the aggregate 142,774 barrels, against 177,784 for the same period in 1898. This explains why the stock on hand is a little in excess of 1898, despite the fact that receipts this year are away behind.

At this writing prices are 4 to 5c. higher in Canada than a week ago, quotations in Toronto being 71 to 72c.

Boys and men who wait to do a thing until they have time to do it are always a lap or two behind in life's race.

SEVEN YEARS OF PRICES.

AN interesting diagram showing the fluctuations in the prices of crude and finished iron and steel was published in The Iron Age of July 27. The period covered was from January 1, 1892, to June, 1899.

In Bessemer pig iron the fluctuations were all the way from $9.25 per ton to $18.50. The lowest figure was touched in July, 1897, and the highest in June, 1899. Here, from the lowest to the highest point, there is a difference of 100 per cent.

The difference from the lowest to the highest point in steel billets is still greater, the lowest being $13.82, and the highest $30.10. The latter was in July, 1899, and the former in June, 1897.

The lowest figure Southern gray forge touched was $8.25, and that price obtained on several occasions during the seven-year period covered by the diagram. The highest point touched was in June, 1899, when the price was $14.85.

Cut nails went as low as 70c. per keg base in April, 1895, but by May 30, 1896, they were $2.30. This price was maintained until October of the same year, after which there was a decline, until, in August, 1898, $1.05 was touched. In June last the price had advanced to $1.95.

The lowest price touched by wire nails was 86c. per keg base. This was in January, 1895. By May, 1896, under the influence of the combination, the price was worked up $2.55 per keg. That price was maintained for six months. But, when jobbers in the United States began to import American nails from Liverpool at 50 or 60c. per keg less than they could buy them at home, the combination collapsed and the prices came down, until, by July, 1897, the base was $1.25. In June, 1899, the price had reached $2.30.

The highest price touched by barbed wire was in January, 1892, $3.05 was the selling price, and the lowest, $1.60, in July and August, 1897. By June last the price had advanced to $2.90.

As already stated, the period covered by the diagram was from January 1, 1892, to June, 1899. Since June last there have been material advances in all the lines named. Wire nails, for instance, are quoted at $2.50 f.o.b. Pittsburg, and cut nails at $2.20, while Bessemer pig is up to $20.75.

These advances have not been altogether uninfluenced by trusts, but the extraordinary nature of the demand and the unusual difficulty experienced in supplying it have been all-important factors in bringing about the high range of values now ruling.

THE LEAD ORE DUTY QUESTION.

The duty on lead ore is still a live question in British Columbia. At the second day's session of the Eastern British Columbia Board of Trade, which met in Rossland on Friday last week, the chief interest of the day was centred on resolutions regarding this subject.

G. O. Buchanan, of Kaslo, advocated an arrangement by which lead ores, the product of the United States or Canada, would be made reciprocally free of duty between the two countries.

W. H. Aldridge, manager of the Canadian Pacific smelter, desired the passing of a resolution asking that lead smelted in Canada and refined in bond abroad should be admitted free of duty, and that the import duties on manufactured lead should be increased.

A resolution was passed asking that the Government and its Commissioners to the International Conference should make every effort to secure a reciprocal arrangement by which lead in bullion or ore would be admitted free to the United States markets, and that, in the event of failure to secure such an arrangement, Mr. Aldridge's motion would be the most satisfactory solution of the difficulty.

U. S. IRON EXPORTS.

Not only is the capacity of the iron and steel plants of the United States taxed to meet domestic requirements, but the export movement continues to expand.

A glance at some figures lately secured from the New York and Baltimore Customs houses makes this fact perfectly clear.

During the week ending July 29, the exports of steel rails from New York were 1,282 tons; pig iron, nil; steel bars, 52 tons, and steel billets, nil. In the week ending August 5, the exports of steel rails had increased to 1,952 tons and steel bars to 64 tons, with 4 tons of pig iron; no billets being reported. From Baltimore during the last week of July the only exports of iron material were 105 tons of steel bars, and during the first week of August 282 tons of this same material were shipped from the same port.

Since January 1 of this year to the week ending August 5, there were exported from both ports 65,951 tons of steel rails, 33,720 tons of steel bars, 6,556 tons of steel billets and 2,485 tons of pig iron, or a total of 108,712 tons of crude iron and steel material.

THE U. S. MINERAL INDUSTRY.

THAT the development of mining is as great as ever is evidenced from the statistics gathered by R. P. Rothwell, editor of the seventh annual volume of "The Mineral Industry; Its Statistics, Technology and Trade."

The report shows that the production of various ores in the United States in 1898 amounted to $433,659,141, as compared with $407,913,912 in 1897.

The greatest production was of coal. In 1898 $128,419,354 of bituminous and $81,445,937 of anthracite coal was produced, as compared with $120,013,372 of bituminous and $85,857,717 of anthracite in 1897. Clay products to the value of $58,470,543 were produced last year, as compared with $56,487,527 the year before. Crude petroleum ranks third, its production in 1898 being valued at $42,100,000, as against $39,372,000 in 1897. Iron ore shows a great increase, the values being $37,593,000 in 1898 and $30,941,000 in 1897.

The increase in the production of metals has been even greater than the output of ores. In 1898, $314,255,000 of metals were produced, as against $272,178,392 in 1897. The principal increases are in pig iron, gold, and copper. The pig iron output increased from $91,009,600 to $110,160,000; copper, from $55,351,000 to $63,129,047; gold, from $59,210,000 to $65,082,000.

Secondary mineral and chemical products are also being manufactured in increasing quantities in the United States. The principal of these is coke, of which $30,505,563 was produced in 1898, as compared with $23,203,920 in 1897.

WILL BRITAIN HAVE A PIG IRON FAMINE?

THERE has been a great deal of talk lately in regard to a possible pig iron famine in Great Britain.

A good many do not, however, look upon this possibility with much seriousness. The Iron and Steel Trades Journal, of July 29, for instance, in referring to the fact that the shipments from Connal's stores at Glasgow had brought the total down to 301,829 tons, a decrease of 14,000 since the beginning of the year, remarks: "In attempting to prove that there is an iron famine, we get no supporting testimony from the position of the Glasgow stocks."

In The Birmingham Daily Post of a recent issue is a letter from a correspondent signing himself "Ironmaster," in which he takes strong grounds against the idea of a shortage in pig iron.

"I desire," he says, "through your columns, to raise a word of protest against the continual increase in the price of iron, and pig iron especially. We see constantly in the papers statements of the extreme scarcity of pig iron, steel, and coal. So far as this district is concerned, it is a pure myth. During a large part of last year, and until April of this, pig iron was extremely scarce, and no one could blame the makers for profiting thereby. To-day, it is not scarce. A visit to the distributing stations would reveal overstocked yards, users have large stocks, and it is only the fear of having old contracts canceled which induces them to accept the increased deliveries. Steel billets and blooms can be obtained at short notice, while it is well known that collieries are not working more than 3½ to 4½ days a week. And yet, prices keep advancing week by week. It is one huge game of bluff—a fear that if prices are not increased buyers will begin to take fright and the inevitable reaction begin. There is a large and healthy trade going on in the country, but if prices of iron continue to rush up in the present fashion consumers must restrict their requirements, and a trade at reasonable prices which might last for years will be sacrificed to the cupidity and shortsightedness of a few individuals. This result can already be seen in Scotland, where practically no new tonnage is being booked, and a similar state of things must soon spread over the rest of the country unless we are warned in time." We were under the impression that there really is an actual scarcity of pig iron in the Midlands, and that if every hole and corner were searched it would be impossible to find anything approaching the stocks in the warrant stores in Glasgow or on the Northwest Coast.

DOOR KNOBS 10 PER CENT. HIGHER

Porcelain, mineral, and jet door knobs have been advanced 10 per cent. in price by the Canadian manufacturers. The new prices under the lists of The Peterboro' Lock Manufacturing Co., Limited, and The Gurney-Tilden Manufacturing Co., Limited, are as follows:

Peterboro' Nos.	Gurney-Tilden Nos.		List Price
307	500	Rim, porcelain, japanned mountings	$1 00
306	501	Mortise, porcelain, japanned mountings	1 00
301	502	Rim, mineral, japanned mountings	1 00
300	503	Mortise, mineral, japanned mountings	1 00
337	504	Rim, jet, japanned mountings	1 00
336	505	Mortise, jet, japanned mountings	1 00
3507	506	Rim, porcelain, Berlin bronzed necks, ornamental roses	1 70
3506	507	Mortise, porcelain, Berlin bronzed necks, ornamental roses	1 70
3505	508	Rim, jet, Berlin bronzed necks, ornamental roses	1 70
3504	509	Mortise, jet, Berlin bronzed necks, ornamental roses	1 70
4507	510	Rim, porcelain, bronze-plated necks, ornamental roses	2 10
4506	511	Mortise, porcelain, bronze-plated necks, ornamental roses	2 10
4505	512	Rim, jet, bronze-plated necks, ornamental roses	2 10
4504	513	Mortise, jet, bronze-plated necks, ornamental roses	2 10
319	514	Rim, porcelain, nickeled-iron necks, brass roses	2 10
318	515	Mortise, porcelain, nickeled-iron necks, brass roses	2 10
339	516	Rim, jet, nickeled-iron necks, brass roses	2 10
338	517	Mortise, jet, nickeled-iron necks, brass roses	2 10
335	518	Rim, mineral, nickeled-iron necks, brass roses	2 10
334	519	Mortise, mineral, nickeled-iron necks, brass roses	2 10
2507	520	Rim, porcelain, real bronze necks, ornamental roses	3 85
2506	521	Mortise, porcelain, real bronze necks, ornamental roses	3 85
2505	522	Rim, jet, real bronze necks, ornamental roses	3 85
2504	523	Mortise, jet, real bronze necks, ornamental roses	3 85
509	524	Rim, porcelain, plain bronze neck and roses, square or round	3 85
508	525	Mortise, porcelain, plain bronze neck and roses, square or round	3 85
503	526	Rim, jet, plain bronze neck and roses, square or round	3 85
502	527	Mortise, jet, plain bronze neck and roses, square or round	3 85
507	528	Rim, porcelain, plain brass neck and roses, square or round	3 85
506	529	Mortise, porcelain, plain brass neck and roses, square or round	3 85
501	530	Rim, jet, plain brass neck and roses, square or round	3 85
500	531	Mortise, jet, plain brass neck and roses, square or round	3 85

Cases containing 12 dozen, 30c. each; cases containing 20 dozen, 40c. each.

Terms: 60 days net or 3 per cent. cash discount will be allowed if paid within 30 days from date of invoice—f.o.b. Hamilton, Toronto, Montreal, Peterboro' and London.

LANTERNS ARE DEARER.

An advance of 25 to 50c. per dozen is announced by the manufacturers under date of August 9.

Quotations are now as follows: Plain cold blast, $7.50 per doz.; ordinary, with "O" burner, $4.25 per doz.; "Dash Board," cold blast, $9.50 per doz.; No. 0, $6. Japanning is 50c. per doz. extra.

THE FIRMNESS OF SLEIGH BELLS.

A stronger feeling has developed in regard to the price of sleigh bells.

One manufacturer who was asked for quotations demanded an advance of 25 per cent. on figures obtaining six weeks ago.

Merchants who have already placed orders evidently stand to make money on their purchases.

Jobbers report that during the past week they have been in receipt of a number of inquiries for prices from retailers.

ANOTHER DROP IN SHOT.

Reference was made last week to the collapse of the agreement between the manufacturers of shot in Canada, and the consequent drop in prices.

Since then matters have not improved, and this week we announce a further decline in the price of the Toronto makers, making the total depreciation, since the agreement collapsed, $1.25 per 100 lb.

The price is now as follows: Ordinary drop shot, $4.75 per 100 lb.; chilled shot, $5.15 per 100 lb. f.o.b. Toronto. Terms are 3 per cent. cash, and freights are equalized on Montreal.

REGISTERS ADVANCE IN PRICE.

The manufacturers of registers in Canada announced, on August 10, an advance of 10 per cent. in the price of registers, the discount being 60 and 10 per cent. instead of 60, 10 and 10 per cent.

As far as can be gathered, comparatively few orders have been placed for registers. Consequently, dealers will be compelled to pay the advance for the bulk of their supplies.

Those who ordered registers when they ordered furnaces are fortunate.

THE BARGAIN COUNTER DELUSION.

A LOCAL organization, known as the Consumers' League of Chicago, has undertaken to show to the buying public the real conditions which exist in department stores.

Recently, Miss Annie Marion MacLean, of the University of Chicago, took a place as saleswoman in two such institutions, and her observations were published in the last number of The American Journal of Sociology.

Amongst other things said in this article, which speaks for itself, are these :

"The difficulty of finding employment was not so great as might be supposed. Owing to the holiday rush and the consequent need of large reinforcements to the original help, the employers were not insistent on experience as a requisite for the successful applicant. However, it was not until several visits had been made that I was promised a position at $3 a week. Work was to begin the following Monday, which would give me just two weeks of the Christmas trade. Employment being promised, it seemed desirable to engage board in some home for workingwomen ; for the environment which such a place would provide gave promise of the best results. I was fortunate in finding a most satisfactory place not far from the heart of the city, and there I went as a workingwoman.

"This home is deserving of more than passing mention. It provides board and lodging, together with the use of pleasant parlors and library, to workingwomen under 30 years of age for $2.50 per week, if they are content to occupy a single bed in a dormitory. These dormitories are thoughtfully planned and accommodate from 10 to 15 each. A large proportion of the 65 residents were saleswomen, and they, in the course of conversation, gave me much useful information. All classes of girls were there, and most of them received very low wages."

On beginning work Monday morning, Miss MacLean found that one of the difficult things was keeping track of the prices, which were frequently changed during the day. The penalty for selling under price was immediate discharge, while selling above price met with no disapproval.

"Every morning there were special sales. Sometimes articles that had sold for $1 would be reduced to 98c., with much blowing of trumpets, while, again 25c. articles would be offered at a bargain for 40c. 'to-day only.' But we soon learned what things were to be 'leaders' from day to day, and the manager's brief instructions each morning were sufficient to keep us posted on the bargains. The charms of the bargain counter vanish when one has been behind the scenes and learned something of its history. The humor of it seemed to impress the clerks, for often knowing winks would be exchanged when some unwary customer was being victimized."

In this store no seats were provided for the employes.

"Oh, the weariness of the first morning ! The hours seemed days. 'Can I possibly stand up all day?' was the thought uppermost in my mind, for I soon learned from my companions that abusive language was the share of the one who was found sitting down. Later in the week I found this to be true. One of the girls who was well nigh exhausted sat a moment on a little table that was for sale—there was not a seat of any kind in the room, and the only way one could get a moment's rest was to sit on the children's furniture that was for sale on one part of the floor. The manager came along and found the poor girl resting. The only sympathy he manifested was to call out in rough tones : 'Get up out of that, you lazy huzzy ! I don't pay you to sit around all day !' Under such circumstances it is small wonder that the stolen rests were few. By night, the men as well as women, were limping wearily across the floor, and many sales were made under positive physical agony.

"The days in the store were much the same, with their endless fatigue. At times the rush would be great ; then again we would have nothing to do but stand around and talk. Thus we became surprisingly well acquainted in a short time. We talked about our wages and compared index sheets on every possible occasion. Some sold very little, and at the end of the week had no more than $3. The mental anguish of some of the girls, when they saw at night how small their sales had been, is impossible to describe. One may elect to become a worker, and endure the hardships of the toil, and live the life of the laborer, and receive the same starvation wages, but he can never experience the abject wretchedness of not knowing where to turn when the last dollar is gone. Three dollars a week to a girl alone in the city means starvation or shame."

Miss MacLean emphasizes the importance of bringing the saleswoman's wages "up to a point where she can live without the wages of sin."

"All the hardships of the shop girl's life fade into insignificance before this grave danger she has to face. Adequate support is the first necessity. Improved sanitary conditions and opportunity for rest may well take a second place. They can be secured by legislation ; the other must come from united action on the part of the buyers and the organization of the saleswomen themselves. The trades' union spirit should be fostered and the workingwomen taught the power of united effort."

HOW A TRADE PAPER HELPS.

Some time ago one of our successful business men in the supply line, when asked why he patronized trade papers so largely, to the neglect of other methods, made the following reply : "Men who do not read their trade papers are usually poor customers. If I sell them a lot of machinery they do not know how to use it, and report a failure, or we have to run after them, lose time and money to get them agoing, and make the sale stick. But those who read and are posted know how and succeed. Such men would not read circulars, if I were to mail circulars to them. They see my ad. regularly in the trade paper, and know I have an established business, and when they want anything in my line write me, and don't whine about prices, or what time they can get from others, buy, try, and have no trouble and pay the bill. Give me such a class of customers as I get by such judicious advertising all the time."—National Baker.

AUSTRALIAN HARDWOOD FOR CANADA.

A first importation of Australian hardwoods will arrive on the next Canadian-Australian steamer, the importer being Mr. Arthur P. May, the local hardwood lumber merchant. There are certain classes of hardwood grown in Australia which Mr. May thinks would find a useful field here, and, as practically all the hardwood used in the Province has to be imported, Mr. May has undertaken the present experimental order with the purpose of filling the requiremets of the local trade to the best possible advantage. Mr. May's enterprise is worthy of encouragement, and it is possible the result of having a free hand to exercise his enterprising turn. He has recently bought out his partner, Mr. W. G. Christie, and the firm of Christie & May is thus dissolved, Mr. May being now sole owner of the business.—The Province, Vancouver, B.C.

HAMILTON, ONT.

THE BRITISH LEAD INDUSTRY.

IN 1856 the production of lead ore in the Kingdom amounted to 101,997 tons, yielding 73,000 tons of pig lead. In subsequent years the output of lead ore steadily decreased, but in 1869 and 1870 the actual production of pig lead exceeded slightly the 1856 figures, owing to the richer character of the ore mined. In 1856 the average yield of 100 tons of ore was 71½ tons of pig lead, but in the years 1869 and 1870 the average was over 75 tons. In recent years the mineral statistics return only the tonnage of the ore raised, and this has fallen from 98,000 tons in 1870 to 72,000 in 1880, to 45,000 in 1890, and to 35,000 in 1897. Thirty years ago our imports of lead were averaging 65,000 tons a year, now the import from Spain alone is usually about 100,000 tons, and altogether we import 170,000 tons. The once world-renowned "W.B." Beaumont Lead Works, Allendale, Alston Moor, Cumberland, have recently been the scene of a dismantling sale, and the auctioneers have for four days been busy selling without reserve everything remaining at what was for many years one of the most important lead mining and smelting centres in the world. The "W.B." brand of pig lead was formerly the recognized standard for the best English lead, and for instance, in 1873, the average price of "W.B." was £24 7s. 8d., against £23 6s. for ordinary English pig. In 1852 one-sixth of all the lead produced in the country come from the mines in Allendale and Weardale, and here the fortunes of the Fenwicks, the Blacketts, the Beaumonts and other leading families in the north were largely augmented. We note that in 1894 we imported over 160,000 tons of pig and sheet lead at a cost of £1,500,000 in 1894, and £1,600,000 in 1895. In 1872 we paid £1,500,000 for 70,000 tons of lead imported, and though prices were in that year much above the average the fact cannot be ignored that the decline of our own industry has been accompanied by a larger supply at a very much lower price per ton. In 1876 we imported 80,000 tons of lead and it cost just £1,750,000. Twenty years later, in 1896, we received more than double the quantity of lead and it cost us only £100,000 more money. We get 100 per cent. more lead for 5 per cent. more money. The "W. B." works have passed away and lead mining as a British industry has lost its relative importance, but the trade of the country as a whole has lost little and gained much by the change.—Iron and Steel Trades Journal.

GUELPH IRON AND STEEL CO.

The Guelph Iron and Steel Co. are now running full blast, with over 60 hands, and are turning out 25,000 lb. of finished iron every day. The iron is shipped to Woodstock, Toronto, London, and all points east and west.

The mill has been greatly improved since Messrs. White and Kloepfer have taken hold of it. At present a switch is about completed from the Guelph Junction into the mills, to ship their product.

On Wednesday a new squeezer, weighing 45 tons, was brought down, and will be placed in position as soon as possible.

Two more furnaces will be put in immediately—a puddling and a heating furnace, and pair of big shears, which are being made in London. These shears will cut a piece of boiler plate 7 feet long, from ½ to ¾ inches in thickness.—Guelph Daily Mercury.

FORETHOUGHT

in business won't permit cheap paint selling. Forethought looks ahead to ultimate and lasting success, and you can't build that by selling cheap paint.

It takes the high quality of **S.W.P.** to increase your sales steadily, year after year.

The result of wise forethought itself, **S.W.P.** combines everything needed to bring success. Its great durability, beauty and economy give satisfaction to the house owner. Its easy working qualities, great covering capacity, honest measure and strict purity satisfy all the demands of the painter. Our methods of pushing its sale will satisfy you.

Paint-making and paint-marketing with us are the result of over 30 years' experience The position we hold to-day is due in great measure to our forethought in seeing that the best paint sells best.

STOVES HIGHER IN THE MARITIME PROVINCES.

A meeting of the Maritime Stove Foundry Association was held in St. John, N.B., on August 3. The president, Joshua Peters, of Moncton, was in the chair, and there were represented the following foundries :

The Record Foundry Co., of Moncton—the president and Oswald Peters.

The Richmond Iron Foundry, of Halifax—James Hillis.

The Milton Iron Foundry Co., of Yarmouth—T. R. Crosby.

The Sackville Foundry, of Sackville—Chas. Fawcett.

The Amherst Foundry and Heating Co., of Amherst—J. A. Crossman.

The Enterprise Foundry Co., of Sackville—W. B. Dixon.

R. B. Emerson and W. S. Fisher, of St. John.

There was a long discussion over the prices of hollow-ware, which were arranged to the satisfaction of all parties.

The association placed on record a resolution setting forth that their rules have been carefully observed and have given every satisfaction.

It was determined to increase the price of repair castings to 6c. per lb.

In view of the increased cost of raw materials, the association decided to increase the price of stoves and other foundry products 5 per cent., the change to take effect at once.

After mature deliberation, the association decided that it would be in the interest of the retail trade generally if the retail dealers throughout the Maritime Provinces would organize local associations for mutual conference and a better understanding with reference to prices, etc. The members of the association express a willingness to lend every assistance possible towards this end which they voted to be so desirable.

BUSINESS CHANGES.

DIFFICULTIES, ASSIGNMENTS, COMPROMISES.

J. H. DIONNE, general merchant, Montreal, has compromised at 20c. on the dollar, cash.

J. B. V. Lemay, general merchant, St. Jude, Que., has assigned.

Z. Bourassa, sash and door manufacturer, Three Rivers, Que., has assigned.

Edward Winnett, boilermaker, Petrolea, Ont., has assigned to Charles Egan.

J. & P. Nadeau, general merchants, Grand Cascapedia, Que., have assigned.

C. E. Whitney, bicycle dealer, etc., Prescott, Ont., has assigned to James Clint.

Matthew W. Ridley, general merchant, Wales, Ont., has assigned to John G. Hay.

J. B. McNulty, general merchant, Ange Gardien, Que., has compromised at 50c. on the dollar, cash.

A. A. Jacques, general merchant, etc., Garthby, Que., has compromised at 30c. on the dollar, cash.

Thomas A. Shaw, general merchant, Thornhill, Man., has assigned in trust to Alex. B. Bethune.

Robert Robertson, general merchant, Burnstown, Que., has assigned to R. C. McNab. His creditors meet on August 11 in Renfrew.

PARTNERSHIPS FORMED AND DISSOLVED.

Derouin & Thibaudeau have registered partnership as roofers in Quebec.

Laurin & Smith, general merchants, Point Gatineau, Que., are dissolving partnership.

Copartnership has been registered by E. V. Cowan and W. H. Cassaboom under the style of Cowan & Cassaboom, general merchants, Rossway, N.S.

Crevier & Co., painters, Montreal, have dissolved, and partnership has been registered by Thomas Crevier and Frank Swail, under the style of Crevier & Swail.

SALES MADE AND PENDING.

May & McWhinnie have commenced business as roofers in Ottawa.

The stock of Bouchard & Turcotte, general merchants, Magog, Que., has been sold.

The assets of U. F. Drouin, hardware dealer, Quebec, are advertised for sale on August 11.

CHANGES.

M. Zeller & Co., hardware dealers, etc., Zurich, Ont., have been succeeded by Appel & Zeller.

E. Brosseau, general merchant, St. Albert, N.W.T., has sold out to Herbert & Perron.

Marie H. A. Tetreault has registered as proprietress of the business of Pierre Dennis, general merchant, St. Cesaire, Que.

A. Cameron & Co., general merchants and furniture dealers, Oak Lake, Man., have sold their furniture stock to R. J. Grey.

Adelard Grenier, blacksmith, Vancouver, has sold out to G. W. Shay.

O. B. Koenig, general merchant, Welland, Ont., has been succeeded by Abram Taylor.

G. A. Rockola, pumpmaker, Virden, Man., has sold out to —. McMillan, and is removing to Rossburn.

FIRES.

Paul Mullins, general merchant, Basteston, N.S., has been burned out ; loss estimated at $3,000 ; no insurance.

The stock and buildings of The Winnipeg River Trading Co., dealers in general merchandise, Whitemouth, Man., have been destroyed by fire ; insurance, $9,400.

DEATHS.

G. W. Crawford, sawmiller, Westfield, N.B., is dead.

A. E. Armstrong, dealer in oils, etc., St. John, N.B., is dead.

A GROWING CANADIAN INDUSTRY.

The main works of The Canada Paint Company, Limited, of Montreal, are particularly well adapted for the economic manufacture of paints and varnishes. Owning their own premises, situated on the Lachine Canal, in close proximity to the large transportation companies and main avenues of the city's commerce, the company command a large and growing trade. The Canada Paint Company, Limited's, factories are pronounced the most complete of their kind in America, inasmuch as they make all their supplies from the first processes. The number of packages shipped each day is almost incredible, and their world-wide reputation is the highest tribute to the quality of this company's products.

CANADIAN DISPLAY TABLES IN ENGLAND.

Hardwareman, Birmingham, of a recent date, has the following : "We hope that no ironmonger in the country will neglect writing to Boeckh Bros. & Company at 38 Wilson street, London, E.C., for a copy of a beautiful little pamphlet on a topic which must greatly interest every retail dealer, whatever line of trade he follows. Especially will it interest hardwaremen, for they can utilize the information both in using the goods and selling them. Ask for the pamphlet on the 'Canadian Display Tables.' It is a little gem of printing, and in a series of photographs are shown the multifarious uses to which these tables, or shelves—for they can be transformed in a twinkling from table to shelves or back again—can be put. There is nothing in the world like them for showing off goods of any kind. If anyone has any doubt about it, an examination of these photographs will convince them. A half-penny post card will get a copy of the pamphlet by return, and they can be furnished in quantities for the use of enterprising dealers who take up an agency for the goods. It is so genuinely good a thing that we press it on the attention of the trade."

George M. Wintermute and Wm. H. Jackson have opened bicycle shops in Vancouver and New Westminster under the style of The Wintermute Cyclery.

CANADIAN GOODS WANTED FOR AUSTRALIA.

HARDWARE AND METAL, this week, received a visit from Mr. C. Bowes-Thistlethwayte, of Sydney, New South Wales.

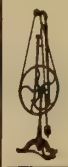
Mr. Thistlethwayte believes that Canada can materially increase her trade with Australia in manufactured goods, and his special object in visiting this country is to secure agencies.

"I believe," he said, "that it is possible for Canada to do a good business with Australia in a good line of manufactured goods. But, of course, they will have to make the price right. And, furthermore, care must be taken in packing, etc."

Mr. Thistlethwayte appears to be an energetic as well an intelligent man, and is no novice in the hardware trade.

Should any manufacturers or merchants desire to correspond with Mr. Thistlethwyte, they can do so in care of HARDWARE AND METAL, Toronto.

THE MICA TRADE.



England, Germany and the United States, according to The New York Journal of Commerce, continue to be the chief markets for the output of the mica mines of Bengal, which are still the main source of the world's supply. From Madras and Calcutta, 1,432,000 lb. of mica were exported last year, as compared with 150,000 lb. sent from Canada. An official examination of the Hazanbagh and Guya mica mines has recently been made by the British Government experts, who report that 5,587 people find employment, and that the exports by sea are about 50 per cent. of the total production. This examination, it is believed, was undertaken in consequence of recent discoveries in this country, which, should they prove practicable, will open up a new and probably an extensive market. Mica is being largely consumed every year, and the trade is in a fair way to assume large proportions. India is said to be a country where mica is abundant.

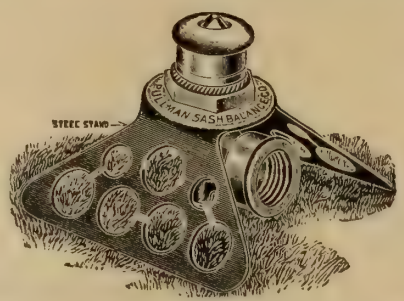
MICHIPICOTEN IRON DEPOSITS.

THE discovery of the extent and importance of the hematite or limonite deposits in the Michipicoten district seems to promise an enormous development in the iron smelting industry of Ontario. A realization of the immense area and valuable nature of the deposits has been obtained by the receipt of a 43-lb. sample of brown hematite at the Bureau of Mines, accompanied by an explanatory letter from Prof. A. P. Coleman, Provincial Geologist, who has been spending some time in the Michipicoten region.

The ore specimen in question contains 60 per cent. of iron, and it was taken from a deposit on the claim of Mr. E. V. Clergue, of Sault Ste Marie, which is about ten miles north of Michipicoten Post. The deposit, according to Dr. Coleman, has an area of 350 feet by 450 feet, although late exploration shows the length to be not less than 550 feet. The deposit rises to a height of 80 feet above the level of Lake Boya, into the waters of which it dips. So far as can be seen, Mr. Coleman says, most of the deposit is high-grade ore. It possesses all the characteristics of hard brown hematite, many of the specimens contained in it showing botryoidac forms, and a variety of beautiful colors. While the percentage of iron is high, there are only traces of sulphur and phosphorus. If the hill in which it appears is solid ore, which is almost certain, the quantity in sight above the ground line would be about 1,680,000 short tons, and if it goes to any distance below the ground line the quantity would be much more. The ore in sight alone, however, should produce 1,000,000 tons of pig iron, worth at the present United States price, $15,000,000.



Dr. Coleman says none of the adjoining locations have any important ore bodies in sight, but the same formation runs through them as in the Clergue mine, to a greater or less extent. Mr. Healy, of Duluth, who recently acquired these properties adjoining the Clergue mine, thinks the prospects are very good.

To give an idea of the importance of the Clergue mine, it is sufficient to say that a blast furnace capable of smelting 200 tons per day, and working 300 days in the year, would occupy 28 years in smelting the ore in sight. As far as Director Blue, of the Bureau of Mines, is aware, it is the only important deposit of hard brown hematite in the country, and it very closely resembles the rich hematite ores supplied by Malta and Cuba. The deposit is so situated that the ore can be mined very cheaply—in fact, it can be mined as an open quarry, and very easily and cheaply handled. The distance from the mine to the water's edge at Michipicoten harbor is only 12 miles, and docks are to be constructed at the latter point, where it can be put on board and delivered to the furnaces at Midland, Hamilton, or Deseronto.

A railway is now in course of construction from Michipicoten harbor to the mines, which is expected to be completed in time to ship out a quantity of ore this season. A quantity of ore will be sent to the new blast furnace at Midland, and Mr. Clergue is preparing plans for a new blast furnace at Sault Ste. Marie.

THE "PULLMAN" LAWN SPRINKLER

The Pullman Sash Balance Co., manufacturers of hardware specialties, Rochester, N.Y., are placing on the market an improved lawn sprinkler, "The Pullman." The accompanying illustration shows its

design. The stand is made of enameled cold steel, the remainder of nickled bronze, so that there is no chance to rust, and as it has no ball, spring or other moving part, there is little chance of it breaking or getting out of order. It sprinkles evenly at all pressures, at the ordinary pressure covering 500 square feet with a pretty umbrella-shaped spray with a central jet. The stand can be removed and a strong pin attached for watering terraces and uneven ground where the stand could not be set level. The nozzle can be disconnected from the stand and attached directly to the hose.

INQUIRIES AND ANSWERS.

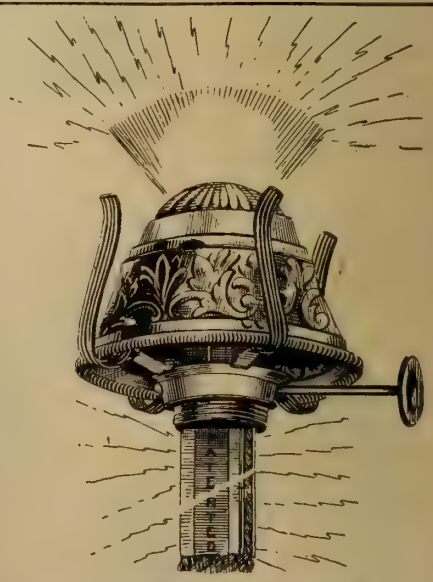
SLOT MACHINES WANTED.

A well-known firm in Canada write: "Can you, or any of your readers, tell us where in Canada we can get slot machines made. We know where they can be bought of foreign make, but we prefer those made in Canada?"

[Can any of our readers supply the desired information?—The EDITOR.]

BAMBOO FURNITURE.

In reply to a recent request in this column for the names of the manufacturers of bamboo furniture, A. E. Richard, Breslau, Ont., writes that he has been making furniture of this description since October, 1898.



It was inadvertently stated in a former issue that the American Rattan Co. was situated at Walkerville. It should have read Walkerton.

STRIKES AND LOSSES.

When Mr. Carroll D. Wright was chief of the Massachusetts Bureau of Labor Statistics he compiled some figures bearing on the losses caused by strikes and lockouts, says Bradstreet's. For instance, he discovered that between January 1, 1881, and June 30, 1894, the laborers of the country lost through strikes some $163,807,866, and that in the same period $10,000,000 were disbursed by labor organizations to keep the strike spirit alive among the discontented workers. Of course, the employers had to show up on the losing side as well as the employes, but it is significant that their loss amounted to something like $82,000,000. Whether the laborers made up for the losses after they had returned to work is not on record, but it is doubtful that anybody save the walking delegates profited by the disputes. These figures are timely, inasmuch as the strike fever seems to have had a tendency to become epidemic among unskilled workers within the past few weeks.

THE LITTLE THINGS.

See to the little things and the big things will take care of themselves, remarks a contemporary. The only way it is really possible to attend to little things properly, that is, if one desires to attend to them, is not to trust to the memory in doing the work, no matter how good it may be. A pad should be carried in the pocket; on this mark down whatever you may think of as soon as it occurs to you. One by one attend to the things recorded, and whenever something on the list has been attended to run a pencil through the memorandum.

This light we claim produces a steady incandescent light, double the value of ordinary and consumes less oil (C nad an preferred). Requires snuffing only once in two months—does not smoke—chimneys need no wiping. Positively without smell. Why? Because our automatic battery produces an electric current from the chemicals of the oil which carbonizes the wick, thus, the above results. Less explosive. Will fit any lamp. Sells at sight. Write for prices.

MARKETS AND MARKET NOTES.

QUEBEC MARKETS.

MONTREAL, August 11, 1899.

HARDWARE.

BUSINESS in general hardware has not been active, but the strength in all lines continues unabated. Barbed wire and smooth wire contribute a small movement, and both are firm. Wire nails are held 10c. dearer, while cut nails are unchanged, the movement in both ruling moderate. Horse nails and horseshoes are quiet, but firm as regards value. Screws are steady at the rise with a fair inquiry, and the movement in bolts, nuts, etc., also continues quite noticeable. Rope is quiet, and wringers, sporting goods, etc., supply nothing of a striking nature.

BARBED WIRE — Business is quiet and prices are firm. At the factory the base price is $3 f.o.b., but in a jobbing way $3.10 to $3.15 is the range.

SMOOTH STEEL WIRE—With the exception of moderate inquiry for bay-bailing wire, business is quiet. The base price is steady at $2.85 f.o.b. factory for No. 9.

GALVANIZED WIRE — A moderate demand is experienced and prices are unchanged on the basis of $3 for No. 9.

FINE STEEL WIRE—Trade quiet and discounts the same: 20 per cent. off list.

BRASS AND COPPER WIRE — Much the same, at 50 and 2½ per cent. off on brass, and 45 and 10 per cent. on copper wire.

FENCE STAPLES—Unchanged: $3.05 for bright and $3.65 for galvanized per keg of 100 lb.

FINE STAPLES—Quiet and steady. Discounts are: Cooper, 55; poultry netting, 45, and electrician, broom, bed, etc., 40 per cent. off.

WIRE NAILS—There is a fair trade doing in these, and prices are held firmer at $2.80 per keg for standard nails, while the miscellaneous list is 75 per cent. discount.

COPPER WIRE NAILS—Discounts on these are 50 per cent. off list.

CUT NAILS—A quiet trade is noted and prices are unchanged on the basis of $2.25 per keg f.o.b. the usual delivery points.

FLOUR BARREL AND COOPERS' NAILS—The former are 30 and the latter 35 per cent. off list, with a moderate inquiry.

BOAT NAILS — There is a moderate demand for these, and discounts on black and galvanized at 33⅓ per cent.

GALVANIZED ROOFING NAILS—The list price on these is 8c. per lb., with 15 per cent. discount.

PRESSED SPIKES — Are steady and unchanged at 30 per cent. discount.

HORSE NAILS — Trade now rules quiet. Discounts are 50 per cent. on standard and 50 and 20 on Acadia.

HORSESHOES —These are quiet and featureless. We quote as follows: Iron shoes, light and medium pattern, No. 2 and larger $3.50; No. 1 and smaller, $3.75; snow shoes, No. 2 and larger, $3.75; No. 1 and smaller, $4; X L steel shoes, new light pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; featherweight, all sizes, Nos. 0 to 4, $5.15; and toe weight steel shoes, all forward, all sizes $6.25 f.o.b. Montreal, St. John, N.B., and Halifax, N.S. Delivered f.o.b. in Toronto, Hamilton, London and Guelph 10c. per 100 lb. extra.

SCREWS — There has been no further

change in these. Discounts are: Flat head, bright, 80 and 5 per cent; round head do., 75 and 5; flat head, brass, 75 and 5; round head do., 67½ and 5.

BOLTS — A fair inquiry is noted. Discounts are as follows: Carriage bolts, 5-16 and smaller, 55 per cent.; ⅜ and up, 50 per cent.; full square bolts, 65 per cent.; machine bolts, 55 per cent.; coach screw bolts, 67½ per cent., and sleighshoe bolts, 72½ per cent.

NUTS AND WASHERS — In fair request. We quote: Square, 3¾c. and hexagon 4¼c. per lb.; discount off list. Washers in 50-lb. boxes are 50 per cent. discount.

RIVETS — There is a steady inquiry at firm prices. Discounts now are: Black and tinned, 45 per cent.; ditto burrs, 40 per cent.; copper rivets and burrs, 35 per cent.

CORDAGE—Demand is small, but values are firmly held. We quote as follows: Manila, 7-16 and up, 12c.; ⅜, 12½c., and ¼ and 5-16, 13c. Sisal, 10¾c. for 7-16 and up; 11¼c. for ⅜, and 11¾c. for ¼ and 5-16. Binder twine: Pure manila, 10½c.; 550 feet, 10c.; sisal, 500 feet, 9½c.

WRINGERS — Business is moderate, with prices steady at $48 to $60, as to brand, with 45 per cent. discount.

BUILDING PAPER—Trade is quiet and prices unchanged.

SPORTING GOODS—Business is quiet, with no new features to report this week.

CEMENT — Trade in cement has been more active, several round lots having been placed during the week. Advices from abroad continue very firm. We quote: Belgian, $1.90 to $2.10; English, $2.30 to $2.40, and German, $2.45 to $2.65, per cask ex wharf.

FIREBRICKS—An active trade is passing in firebricks, and prices are firmly held at $17 to $23 per 1,000, as to brand, ex wharf.

METALS.

The general strength in heavy iron and metals continues unabated, and there are few changes to report in the ruling features of the iron situation. Ingot tin has fluctuated somewhat, but is again cabled firm. Lead is rather firmer abroad than it was a week ago, and copper is also higher in London than it was this day week. Billets have advanced $1 the ton at Pittsburg, and the exceeding firmness in pig iron continues.

PIG IRON—This market keeps very firm, No. 1 Summerlee being quoted at $24 to $25 per ton. No quotation is obtainable on domestic pig iron. In Glasgow, warrants have advanced from 69s. 7d. last week to 70s. 5d. this.

BAR IRON—Business in bar iron is doing

steadily at $2, and, though a round lot might be shaded, it is doubtful.

BLACK SHEETS — There has been a further sharp advance in these of from 25 to 50c., the range now being: 8 and 16, $3; 18 and 20, $2.40; 22 and 24, $2.60; 26, $2.65, and 28, $2.70.

HOOP IRON—Firm at the rise, $2.60 to $2.70.

STEEL — Firm. We quote: Sleighshoe and tire, $2.50; spring, $2.75; machinery, $3, and toe calk, $3.

GALVANIZED IRON—Business is firm and prices are strongly held. We quote: Queen's Head, $4.55 to $4.80; Comet brand, $4.30 to $4.55, according to the size of the order.

INGOT COPPER —The quotation has advanced almost £1 in London on the week, but here we quote prices unchanged at 19½ to 20c.

INGOT TIN — The price outside has fluctuated more than usual, but at present it shows an advance on the low point of last week. On spot less than 35c. was accepted early in the week, but now that price is the inside figure, while for small lots 36c. is asked.

PIG LEAD — There has been an advance of 2s. 6d. on the spot price in London. Here values are unchanged at $4.25 per 100 lb.

LEAD PIPE—Unchanged. We quote as follows: Ordinary, 7c., and composition waste, 7½., with 20 per cent. discount.

IRON PIPE — In good inquiry, with prices unchanged. We quote as follows: Black pipe, ⅛ and ¼-inch, $3.12; ½-inch, $3.09; ¾-inch, $3.72; 1-inch, $5.14; 1¼-inch, $6.82; 1½-inch, $8.66 and 2-inch, $11.02. Galvanized pipe, ⅛ and ¼-inch, $5.64; ½-inch, $6.64; ¾-inch, $7.41; 1-inch, $10.12; 1¼-inch, $14.03; 1½-inch, $17.16, and 2-inch, $23.

TINPLATES — With backward deliveries and small stocks here, sellers this week marked up prices on coke 40c., and on charcoal 55c. We quote: Coke, I.C., $4.40; charcoal, I. C., Allaway or Comet brands, $4.80; do. I. X., $5.05; Lincoln, $5; P. D. Crown, $5.30; do. I. X., $5.80; Bradley's, $6.25.

CANADA PLATES — There has been another advance of 20c. in the price of these, and we now quote: 52's, $2.60; 60's, $2.70; 75's, $2.80; full polished, $3.25; galvanized Canada plates, $4.55 for 52's.

TERNE PLATE—There has been another advance of 25c. in these, to $7.50.

COIL CHAIN—Steady to firm. We quote: No. 6, 10¾c.; No. 5, 9¼c.; No. 4, 8¼c., and No. 3, 7¼c. per lb.; ¼-inch, $6; 5-16, $4.75; ⅜, $4.25; 7-16, $4.10; ½, $4; 9-16, $3.95; ⅝, $3.85; ¾, $3 65, and ⅞, $3.55 per 100 lb.

SHEET ZINC — Continues stiff at 7½ to 7¾c.

ANTIMONY—Steady at 10 to 11c.

SPELTER—Has been rather easy outside, but there is no change here from $7.

GLASS.

A fair trade is doing in window glass, and, though prices show an upward tendency elsewhere, the range here is still unaltered. We quote as follows: First break, $1.90; second, $2 for 50 feet; first break, 100 feet, $3.60; second, $3.80; third, $4.25; fourth, $4.50; fifth, $5; sixth, $5.50, and seventh, $6.

PAINTS AND OILS.

The main feature of the week has been an extraordinary rise in turpentine. Prices on liquid paints are well maintained, and a further advance in these is spoken of. The general movement in all lines is fair for the season. We quote:

WHITE LEAD—Best brands, Government standard, $6.00; No. 1, $5.62½; No. 2, $5.25; No. 3, $4.87½.

DRY WHITE LEAD—$4.75 in casks; kegs, $5.

RED LEAD—Firm; casks, $4.75; in kegs, $4.50.

WHITE ZINC PAINT—Pure, 8c.; No. 1, 6½c.; in oil, pure, 9c.; No. 1, 7½c.

PUTTY —We quote: Bulk, $1.65; bladders, in bbls., $1.80; bladders, in cases, $1.95; in tins, $2.05 to $2.30.

LINSEED OIL — Raw, 57c.; boiled, 58c., five to nine-barrels, 1c. less, ten and twenty-barrel lots open, net cash, plus 2c. for 4 months. Delivered anywhere in Ontario between Montreal and Oshawa at 1c. per gallon advance and freight allowed.

TURPENTINE—Single barrels, 72c.; two to four barrels, 71c.; two to four-barrel lots, 1c. less, five barrels and over, open terms, the same terms as linseed oil.

MIXED PAINTS—Firm; $1 to $1.20 per gallon.

CASTOR OIL—Firm; 7½ to 8c.

SEAL OIL—35½ to 37½c.

COD OIL—35 to 37½c.

NAVAL STORES—Fair demand for all lines, and prices show no change: Resins, $2.75 to $4.50, as to brand; coal tar, $3 to $3.50; cotton waste, 4½ to 5½c. for colored, and 6 to 7½c. for white; oakum, 5½ to 6½c., and cotton oakum, 9 to 11c.

PARIS GREEN—250-lb. casks, 13½c.; 50-lb. drums, 14c.; 1-lb. packages, 15c.; ½-lb. packages, 16½c.; 1-lb. tins, 15½c.

PETROLEUM.

A fair trade is noted. We quote: Crown, Acme, the new Sarnia oil, 15½c.; Perfection and Silver Star Canadian refined, 14½c.; American prime white, 17c.; water white, 18c., and Pratt's astral, 19½c., in small quantities.

HIDES.

Prices are steady. Lambskins, 40c. Beef hides, 9, 8 and 7c., while calfskins are 11 and 9c.

COAL.

Coal is very firm. We quote: Stove, $5.75; chestnut, $5.75; egg, $5.50; Scotch grate, $6; Scotch steam, $4 to $4.50; Tower ports steam, $3.50 to $3.75.

MONTREAL NOTES.

Canada plates have been marked up 20c. all around.

Wire nails here are held 10c. higher at $2.80 base f.o.b.

Billets have advanced $1 the ton on last week's basis at Pittsburg.

Turpentine has advanced sharply under a good demand and a short crop.

Black sheets have been advanced 20c. on all sizes and are firm at the rise.

Tinplates are 40c. higher for coke and 55c. for charcoal on the previous week.

Terne plates continue to stiffen, being 25c. higher than they were a week ago.

Lewis Bros. & Co. are in receipt of several cars of binder twine, and are offering special inducements to the trade. Persons wishing to buy will do well to consult them by letter before placing their orders.

ONTARIO MARKETS.

TORONTO, August 11, 1899.

HARDWARE.

THE wholesale hardware trade continues in a healthy condition this week. For this time of the year business is fairly active. The week has been characterized by further advances in prices. Porcelain, mineral and jet door knobs have been advanced 10 per cent. A similar advance is to be noted in registers. Lanterns are from 25 to 50c. per dozen dearer. A further reduction is to be noted in the price of shot. Some nice shipments for Manitoba and the Northwest are going forward this week.

BARBED WIRE—Trade is quiet and prices unchanged at $3.25 f.o.b. Toronto.

SMOOTH STEEL WIRE—There is very little doing in oiled and annealed wire, but a fair quantity of hay-baling wire is going forward. The base price is unchanged at $2.85 f.o.b. factory.

GALVANIZED WIRE — Trade is still only moderate in this line. We quote as follows: Nos. 6, 7, 8 gauge $3.40; No. 9, $2.90; No. 10, $3.50; No. 11, $3.55; No. 12, $3.05; No. 13, $3.15; No. 14, $3.90; No. 15, $4.50; No. 16, $4.65.

WIRE NAILS—Prices have advanced in Montreal, but the ruling base price here is still $2.75. In one or two instances, however, 5c. more than that figure has been obtained.

CUT NAILS — Continue quiet, at $2.25 f.o.b. Toronto, Hamilton and London.

HORSE NAILS — Very little doing. We quote: Standard, oval head, 50 per cent.; Acadia, countersunk head, 50 and 20 per cent.

HORSESHOES—The demand is still only moderate. We quote: f.o.b. Toronto, Hamilton, London and Guelph: No. 2 and larger, light, medium and heavy iron shoes, $3.60; snow shoes, $3.85; light steel shoes, $4.00; featherweight shoes, all sizes, $5.25. No. 1 and smaller, light, medium and heavy iron shoes, $3.85 per keg; iron snow shoes, $4.20; light steel shoes, $4.15; featherweight steel shoes, all sizes, $5.25.

SCREWS—Trade is still decidedly active at firm and unchanged prices. We quote as follows: Flat head bright, 80 and 5 per cent. off the list; round head bright, 75 and 5 per cent.; flat head brass, 75 and 5 per cent.; round head brass, 67½ and 5 per cent.; flat head bronze, 67½ and 5 per cent.; round head bronze, 62½ and 5 per cent.

BOLTS—An active business is to be noted in stove, carriage, and machine bolts. We quote: Norway bolts, full square, 65 per cent.; common carriage bolts, 5-16 and under, 55 per cent.; ditto, ⅜ and larger, 50 per cent.; ditto, full square, 65 per cent.; machine bolts, all sizes, 55 per cent.; coach screws, 67½ per cent.; sleighshoe bolts, 72½ per cent.; blank bolts, 55 per cent.; bolt ends, 62½ per cent.; nuts, square, 3¾c.; nuts, hexagon, 4¼c.; tapping nuts, 60 per cent.; tire bolts, 60 and 10 per cent.; stove bolts, 60 and 10 per cent.

RIVETS AND BURRS — Trade is fairly brisk. We quote: Carriage section, wagon box rivets, etc. (steel), 60 per cent. off the list; ditto (Norway iron), 55 per cent.; black M rivets, (steel) 60 per cent.; ditto (Norway iron), 45 per cent.; iron burrs, 40 per cent.; copper rivets, 35 per cent.; bifurcated, with box, $1.25; coppered iron rivets and burrs, in 5-lb. carton boxes, 30c. per lb.

ROPE—There is not much business being done, but prices are firm. We quote: Sisal, 7-16 in. and larger, 10½c. per lb.; ⅜ in., 11c.; ¼ and 5-16 in., 11½c. Manila, 7-16 in. and larger, 12c. per lb.; ⅜ in., 12½c.; ¼ and 5-16 in., 13c.; New Zealand, 9½c. per lb.; Deep sea line, 13½c. for water laid, and 14½c. for machine-made; hemp, 7 to 9c.; lath yarn, 8¾c. Clotheslines, 48 feet, 90c.; 60 feet, $1.20; 72 feet, $1.50; 100 feet, $2.

CHURNS — Trade is moderate. We quote: Metal frame—No. 0, $3; No. 1, $3.20; No. 2, $3.40; No. 3, $3.75; No. 4, $4.50; No. 5, $5.90. The price of wooden frames is 15c. per churn less than the above. Terms, 3 per cent. off 30 days f.o.b. Toronto.

WRINGERS — Business is quiet, and travelers report that prices are being cut somewhat. We quote: "Leader," $60 per doz.; "Royal Canadian," $58; "Royal American," $48. Prices are all f. o. b. Toronto, Hamilton, Brockville, and Montreal. Discount, 45 per cent. Terms, four months, or 3 per cent. 30 days.

BUILDING PAPER—The movement is a little better than it was a week ago. Quite a few orders are in the houses from Manitoba and the Northwest for September shipment. We quote: Plain building, 28c.

per roll; tarred lining, 35c., according to quality; tarred roofing felt, $1.40 per 100 lb.; carpet felt, $2.25 per 100 lb.

CUTLERY — There is some talk of an advance in this line. Orders are coming in fairly well.

LANTERNS — Prices have been advanced 25 to 50c. per doz., and we now quote as follows: Plain cold blast, $7.50 per doz.; ordinary, with "O" burner, $4.25; "Dash-board," cold blast, $9.50; ditto, No. O, $6. Japanning 50c. per doz. extra. A good many lanterns are being shipped just now.

CEMENT — There is a brisk demand, and as the offerings of imported cement are moderate, the consumption of Canadian Portland is very large. In Toronto, fully twice as much of it has been used this season as last. Prices are unchanged. We quote in barrel lots as follows: Canadian Portland, $2.65 to $2.90; English do., $3; German do., $3.10; Belgian do., $2.70; Canadian hydraulic cements, $1 to $1.10; calcined plaster, $1.90; asbestos cement, $2.50 per bbl.

WARE — Enameled ware is going out freely. The season all through has been a good one in this line. In tinware, trade is quiet.

METALS.

The metal market continues strong, but we have no changes in local quotations to note this week. Business is unusually brisk for all kinds of metals.

PIG IRON—The market is still strong, and the demand good. We still quote: $21 f.o.b. furnace Hamilton.

BAR IRON—The demand continues active and the price firm at $2 base per 100 lb.

BLACK SHEETS—A fair business is still to be noted; 28 gauge is unchanged, at $3.10.

GALVANIZED IRON — Trade continues good, and remarkably so for this time of the year. A good many case lots have gone forward lately. We still quote 28 gauge at $5.

COPPER—The market rules steady, and local quotations are unchanged. The demand is good. We quote: Ingot tin, 20 to 21c. per lb. and sheet, 23 to 23½c. per lb.

PIG TIN—The demand is active. The London and New York markets at the time of writing are firm and higher. Locally, the price is unchanged at 37c. per lb.

TINPLATES — The demand is active, and it is difficult to get delivery. Stocks of tinplate in all sizes are small.

CANADA PLATES — Trade is good. Most of the import orders have been delivered during the past couple of weeks, and they will be about completed before the end of the month. Shipments are coming forward fairly well. We quote: All-dull, $2.75; half-polished, $2.85; all-bright, $3.20.

IRON PIPE — Business continues good and prices firm. Quotations on black pipe are: ¼ to ⅜ inch, $3.35; ½ inch, $3.40; ¾ inch, $4; 1 inch, $5.50; 1¼ inch, $7.35; 1½ inch, $9.25; 2 inch, $12.50; 2½ to 6 inch, discount off the list 45 per cent. Galvanized pipe is quoted as follows: ½ inch, $6.50; ¾ inch, $8; 1 inch, $11; 1¼ inch, $15.25; 1½ inch, $19; 2 inch, $27.

PIG LEAD — The market is firm. We quote: 4½ to 4¾c. per lb.

LEAD PIPE — Still dull. We quote: Ordinary pipe, 7c.; waste, 7½c. Discount, 20 per cent.

RANGE BOILERS—Trade continues good. We quote: Galvanized, 30 gals., $9; 35 gal., $10; 40 gal., $11. Copper, 30 gal., $22; 35 gal., $26; 40 gal., $30; discount off copper boilers, 10 per cent.

SHEET ZINC — Business has improved. Prices are unchanged at 8¼ for cask lots and 8½c. for smaller quantities.

SPELTER—Trade is good. We quote 7½ to 7¾c. per lb.

SOLDER—A good trade is to be noted. We quote: 21 to 22c. for half-and-half; 20 to 21c. for refined, and 18 to 19c. for wiping.

ANTIMONY—Still quiet at 11 to 11½c. for Cookson's.

SOIL PIPE—Trade keeps fair. Discount, 50 and 10 per cent.

PAINTS AND OILS.

A moderate business is being done. Gum shellac case quotations are reduced 4c.; otherwise a general firmness is noted. Turpentine is especially strong, an advance of 5c. this week following the rise of 3c. noted last week. The movement is light at present. No other features of interest are noted on the market. We quote:

WHITE LEAD—Ex Toronto, pure white lead, $6.12½; No. 1, $5.75; No. 2, $5.37½; No. 3, $5; No. 4, $4.62½; dry white lead in casks, $5.10.

RED LEAD—Genuine, in casks of 560 lb., $4.90 to $5; ditto, in kegs of 100 lb., $5.15 to $5.50; No. 1, in casks of 560 lb., $4.75; ditto, kegs of 100 lb., $5.

LITHARGE AND ORANGE MINERAL—Litharge, 6 to 6½c.; orange mineral, 7½ to 8½c.

WHITE ZINC—Genuine, French V.M., in casks, $7 to $7.25; Lehigh, in casks, $6.

PARIS WHITE—90c.

WHITING — 55c. per 100 lb.; Gilders' whiting, 85c.

GUM SHELLAC—In cases, 20c.; in less than cases, 24c.

PLASTER PARIS — Ordinary, $1.75 per

TRENT CANAL.

NOTICE TO MANUFACTURERS OF AND DEALERS IN PORTLAND CEMENT.

The time for receiving tenders for Portland Cement is hereby extended up to 16 o'clock on TUESDAY, the 15th August, 1899.

By order,

L. K. JONES, Secretary.

Department of Railways and Canals,
Ottawa, 28th July, 1899.

Newspapers inserting this advertisement without authority from the Department will not be paid for it.

(32)

TENDERS FOR TELEGRAPH WIRE.

SEALED TENDERS, addressed to the undersigned, and endorsed "Tender for Telegraph Wire," will be received at this office until FRIDAY, EIGHTEENTH AUGUST, 1899, for the supply of three hundred and thirty thousand pounds, or one hundred and sixty-five tons (of 2,000 lb.), of No. 8 S.W.G. Galvanized Iron Telegraph Wire (354 to 356 lb. per mile), delivered in bond, at the C.P.R. station at Vancouver, B.C., within five weeks from the time the contract is awarded.

The quality of the wire and galvanizing must be such as will afford a test corresponding to the Felten-Guilleaume standard EBB; having a constant (resistance x weight, per mile) under 5,700; breaking strain over 1,100 lb.; and taking not less than 20 twists in six inches. Weight of lengths without joint, 90 to 112 lb.

Also, for delivery with the above, 10,000 lb. or five tons (of 2,000 lb.) No. 9 soft Annealed Galvanized Iron Tie Wire, the coils to be distinctively tagged.

Tenders to state the prices per 100 lb, all charges included, in bond, at Vancouver, as above.

Each tender to be accompanied by an accepted bank cheque for an amount equal to ten per cent. of the bulk sum of the tender.

The Department does not bind itself to accept the lowest or any tender.

By Order,

E. F. E. ROY,
Secretary.

Department of Public Works,
Ottawa, 2nd August, 1899.

Newspapers inserting this advertisement without authority from the Department will not be paid for it.

(32)

barrel; New Brunswick, $2 to $2.20 per barrel.

PUMICE STONE—Powdered, $2.50 per cwt. in barrels, and 4 to 5c. per lb. in less quantity; lump, 10c. in small lots, and 8c. in barrels.

LIQUID PAINTS—Pure, $1 per gallon; No. 1 quality, 90c. per gallon.

SEAL OIL—59 to 60c. per gallon, and yellow seal at 49 to 50c.

CASTOR OIL—East India, in cases, 9c. per lb. and 10c. for single tins.

LINSEED OIL — Outside western points (freight allowed): Raw, 1 to 4 barrels, 58c.; boiled, 1 to 4 barrels, 61c. Prices in Toronto, Hamilton, London, are 1c. per gallon less.

TURPENTINE — Outside western points, freight allowed, 1 to 4 barrels, 73c.; in less quantities than barrels, 5c. per gallon extra will be added and packages charged for. Prices in Toronto, Hamilton, and London are 1c. less than the above. Terms, net 30 days.

GLASS.

The import orders which were noted last week as being on the way from Belgium have not yet arrived. There are about 2,500 boxes in the shipment. Meanwhile, the advance noted a week ago in stock glass is well maintained. We quote: Star, first break in 50-foot boxes, $2.15, and in 100-foot boxes, $4; double diamond under 25 united inches, $6, Toronto Hamilton and London; terms 4 months or 3 per cent. 30 days.

OLD MATERIAL

No change is noted. Prices are firm throughout. We quote as follows: Agricultural scrap, 55c. per cwt.; machinery cast, 60c. per cwt.; stove cast scrap, 45c.; No 1 wrought scrap, 55c. per 100 lb.; new light scrap copper, 12½c. per lb.; bottoms, 11c.; heavy copper, 15c.; light scrap brass, 7½c.; heavy yellow scrap brass, 10c.; heavy red scrap brass, 11c.; scrap lead, 2½c.; zinc, 3c; scrap rubber, 4c.; good country mixed rags, 65 to 75c.; clean dry bones, 45 to 50c per 100 lb.

HIDES, SKINS AND WOOL.

HIDES--A good business is being done at firm prices. We quote cowhides: No. 1, 8½c.; No. 2, 7½c.; No. 3, 6¼c. Steer hides are worth ½c. more. Cured hides are worth 9c.

SKINS—Deliveries are large. Prices are unchanged. We quote as follows: No. 1 veal, 8-lb. and up, 9c. per lb.; No. 2, 7c.; dekins, from 30 to 35c.; culls, 15 to 20c. Sheepskins are worth 90c. to $1, and lambskins, 35 to 40c.

NICHOLSON FILE CO., Providence, R.I., U.S.A.

BRITISH PLATE GLASS COMPANY, Limited. Established 1773.

Manufacturers of **Polished, Silvered, Bevelled Chequered, and Rough Plate Glass.** Also of a durable, highly-polished material called "**MARBLETTE,**" suitable for Advertising Tablets, Signs, Facias, Direction Plates, Clock Faces, Mural Tablets, Tombstones, etc. This is supplied plain, embossed, or with incised gilt letters **Benders, Embossers, Brilliant Cutters, etc., etc.** Estimates and Designs on application.

Works: Ravenhead, St. Helens, Lancashire. Agencies: 107 Cannon Street, London, E.C.—128 Hope Street, Glasgow 12 East Parade, Leeds, and 36 Paradise Street, Birmingham. Telegraphic Address: "Glass, St. Helens." Telephone No. 68 St Helens.

WOOL—There is a good business still being done. Prices are unchanged. We quote fleece at 14 to 14¼c., and unwashed at 8 to 9c.

PETROLEUM.

The demand continues to improve. Prices are steady. We quote in barrels, Toronto, as follows: Canadian, 14c.; Sarnia prime white, 14c.; Sarnia water white, 15c.; photogene, 15½c.; American water white, 16½c.; Pratt's astral, 18c.

COAL.

A brisk demand is noted. Prices are well maintained. Anthracite for August delivery at Buffalo and bridges: Egg, stove and nut, $4.50 per gross ton, or $4.01 per net ton; grate, $4.25 per gross ton or $3.79 per net ton.

MARKET NOTES.

Lanterns are 25 to 50c. per doz. dearer.

The price of registers is 10 per cent. higher.

A further reduction has been made in the price of shot.

Porcelain, mineral, and jet door knobs have been advanced 10 per cent.

Another shipment of Pieper's breech-loading guns have been received by H. S. Howland, Sons & Co.

H. S. Howland, Sons & Co. are in receipt of another shipment of the "Cataract" insect exterminator machines. These machines are particularly adapted for poultry yards, cattle sheds, and gardens and orchards.

AMBITION.

IN order to make any progress in the world, a man must have ambition, says The Stoves and Hardware Reporter. Without that he can do nothing which is worthy of consideration. Men who have not possessed this characteristic, and who have consequently made great failures in life, have railed at fate, fortune, luck, and everything else under the sun, excepting themselves and their own incompetence. As a magazine writer once said, the old teaching represented life as a kind of battle-field, where each man fought out his individual conflict with contending forces to his eternal loss or gain, as the case might be; but the new teaching represented life as a kind of an infirmary where moral invertebrates helplessly accept whatever circumstances throw in their way, and bitterly complain because some power indistinctly defined has not given them just exactly what they want. It is well known that prosperity is always proportionate to the individual's powers, but it is also evident that those who have made a complete failure have been devoid of ambition, energy, or purpose. Work is effective in proportion as it is directed by an intelligent mind. The commonest tasks of the most mechanical order require thought and special effort to do them properly. It is this slurring over and shirking of simple things which makes it difficult for men to rise from mediocre positions to higher ones. While they are frequently ambitious to do something better, they are not conscientious enough to perform small tasks sufficiently well to entitle them to positions involving greater responsibilities. Ambition may have many forms, but may justly be defined when found in its highest type as a desire to be something more than one is. Years often bring to men opportunities which enable them to realize some of their aspirations, but it is better to be prepared when these opportunities do arrive. Healthy ambition is the kind that aims at perfection in all that it does. It is always striving for improvement. Its motto is "Elcelsior." Neither time nor adverse circumstances can destroy this ambition. It will raise a man from the lowest to the highest position if he has the proper stamina.

FOR SALE—TWO PIPE MACHINES, IN FIRST-class condition. Will be sold at a bargain. The Gurney Foundry Co., Limited, Toronto. (32)

Barrett's Glass Cutters Standard

Barrett's Practical Glass Cutters are the standard the world over.

Sold by more Hardware Dealers than all other makes combined. Send for prices and sample. W. L. BARRETT, Manufacturer, Bristol, Conn., U.S.A.

A CASH NOTICE.

The following is a copy of a circular sent out by a hardwareman in the Western States to his creditors :

We take this method of advising that on and after January 1, 1899, we will begin selling goods for cash only to any and all. We wish to state that this mode of doing business does in no way reflect upon your credit with us, for our past business relations together have been entirely satisfactory. The time has gone by for a merchant to demand large profits on his goods, and in selling on credit you necessarily help pay for the "other fellow" who never intends to pay. It costs us hundreds of dollars each year for a collector, postage and stationery, also an extra bookkeeper. We intend giving this saving to you in the price of goods that you purchase. There can be no doubt as to the success of this plan, as we purchase in quantities and pay cash. You make money when you buy for cash, and every article in our stock will be marked down to such a figure that you will readily see that you are getting goods for less than you ever bought them. A thousand and one different articles are marked down on a cash basis. You may say this is not the thing, on first thought, but kindly consider that, if we buy for cash in quantities, we can sell lower than our competitors. We will carry a full line of hardware, tinware, stoves, implements, wagons, wire, etc.—in fact, everything carried in an up-to-date hardware store.

If you want to make money, come and see us. We thank you very kindly for past patronage, and trust that you will still remain with us. Everyone is looking for bargains, and we guarantee that we have them.

Wishing you a merry Christmas and a happy and prosperous New Year, we remain,

Yours very truly,

———————.

THE PHILOSOPHICAL POKER.

A Poker, which, while rather slow, as shown by its name, could make a Grate Stir when it wished to, was at first very much hurt by the remark of an Ice Cream Freezer to the effect that in the next world Pokers would be found only in that place where Freezers were unknown. The Poker brooded for a while over the location of its probable future residence, and then said resignedly : "Well, one thing about it is certain : I have had a most uncomfortable life of it here in this world, being, as I am, continually poked into hot, burning coals. The change that is coming for me cannot be much for the worse."—Iron Age.

GOOD STATIONERY IN BUSINESS.

Nowadays, it is only those institutions in business life which have the capability of devising something out of the ordinary run of things, that achieve any pronounced success, remarks an exchange. The firm that runs along year after year, following the beaten tracks worn deep by the routine of business is reasonably sure to find its balance sheet showing an increasing deficit as time goes on, instead of a healthy growth. In other words, it is brains that move.

THE ABBEY IMPROVED CHILLED SHOT COMPANY, LIMITED, Newcastle-on-Tyne

All England Championship Cup, value £100, also stake £100, in all £200, on 7th December, 1898, the winner fired with our shot and writes us : "You will be pleased to hear I won the All England Championship Cup. **I fired with your chilled shot.** Indeed, I would not use any other, as I know from experience it makes the best patterns and kills best."

AMERICAN COW TIES

WILL OUTLAST ALL OTHERS.

This is because the form of the link, the exact size and shape of which are shown above, is such that the wear is distributed evenly over its entire end. The bearing surface is thus very large, and the chain will wear for years without becoming worn appreciably.

With other styles of chain the bearing surface is only a very small portion of the extreme end of the link. Grooves are soon formed, and in a comparatively short time the links are worn—or, properly speaking, cut—through.

These facts are well shown on a cow tie recently brought us for repairs. It was an ordinary No 00 three chain tie. One chain was wire, the other two American. One of the wire links was worn entirely through. The others were nearly as bad—a strong pull would have broken almost any of them. With the American chains on the other hand, the wear was very slight, and hardly noticable—three times this amount would not have weakened the chains seriously.

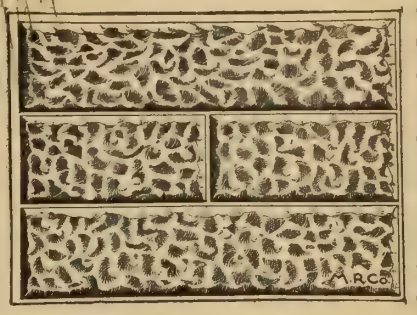
In addition, because of its flat link and smooth surface, American chain is much easier for the neck of the animal than the twisted or wire chain. The American link cannot injure the animal's neck—other styles of link are very liable to.

American Cow Ties are made in all the standard patterns and sizes. They are sold by all jobbers.

ONEIDA COMMUNITY, Limited, NIAGARA FALLS, ONT.

A GREAT HELP TO RETAILERS.

IT is wonderful what good stationery will do, remarks The Keystone. A man may wear a ragged coat, have his toe kissing mother earth each time he steps, conduct his business in a "rusty" looking office, but if the letterheads and envelopes he sends to his correspondents are of excellent quality and workmanship, they immediately transform all the "realties" into broadcloth and mahogany. It cannot be otherwise.



Good stationery is sure to make good impressions. It is sure to make the man that receives it think that the man who sent it is about the right thing. Elegance in stationery means influence in business. Half the world would have confidence in the man without a cent of capital upon which to conduct business if his correspondence was done on the right kind of letterheads. The other half of the world, if they lacked confidence, would nevertheless think that there was something behind the man using such stationery.

Stationery of correct style and quality will never cover up ignorance when displayed in spelling or writing. It will, however, discount these imperfections to this extent: Bad writing or spelling on good stationery will gain attention, and that promptly. Bad spelling and writing on bad stationery give the immediate impression that the writer is a "curious boy," and, 10 to 1, the letter is turned down. Not always, but I'd dislike to count the times such is the case. You will lose by cheap stationery.

BALL-BEARING DRAWERS.

The best things are very often the simple ones. Retailers all know how much trouble is often caused by drawers which stick, and when they don't stick they squeak, which means swearing and sweating—if not a church member. Sweating and swearing mean loss of energy, which may be avoided, says a contemporary, in the matter under consideration in the following simple way: "Secure a half-dozen good-sized marbles—just common playing marbles. Make three round holes in the end strip of wood supporting the drawer, one hole at each end of the strip and one in the middle. Drop your marbles into these holes. Tack a grooved strip of hardwood on the lower part of the drawer just above the marbles. You may then load your drawers down with cast iron and you will need only one handle on your drawer and two fingers on your hand to work the drawer back and forth. In fact, with ball-bearing drawers, as here described, the heavier and larger the drawer the easier it works.

For all kinds of Buildings

USE OUR STEEL SIDINGS.

We make **Rock-Faced Stone,** as shown, or **Pressed Brick.** Either makes a wonderfully durable and economical covering for new buildings, and for improving old ones.

They give a handsome effect—are easy to apply—are fireproof and keep out all dampness.

The reliability and small cost make these lines very popular. Find full information in our catalogue, or write us.

THE METALLIC ROOFING CO., Limited

1179 King St. West, TORONTO.

TRADE CHAT.

SOME of the Galt manufacturing firms, who have hitherto almost exclusively dealt with American iron and steel dealers, are now purchasing their supplies from Great Britain, not from the dictates of patriotism, or a desire for closer relations with those "at 'ome," but for a weightier reason—it is cheaper.—Guelph Mercury.

The Imperial Copper Co., Limited, Parry Sound, Ont., has been incorporated.

The Big Five Mining and Milling Co., Limited, Westville, N.S., is applying for incorporation.

The Sydney Coal Co., Limited, North Sydney, N.S., are advertising for all the claims against them.

The contracts for excavations and concrete foundations for the great steel and iron works that are to be built at North Sydney, N.S., have been let to Halifax, McManus and Moncton men. The figures are about $150,000.

The Kaslo correspondent of The Province, Vancouver, says: "George Williamson is starting the nucleus for a waterworks system in New Denver. He has applied for the right to use water from the springs back of the depot, and will connect the same with the town by a 1¼-inch pipe."

The Croft Acetytene Gas Co. through Thorne, Warren, and Starr, has submitted to the Toronto council an offer to install an acetylene gas plant on Toronto Island at a cost $7,000 less than the estimated cost of ordinary gas plant. The price is $15,000, which, with $13,000 for the piping, would make the total cost $28,000. It is claimed that the Islanders would thereby have cheaper gas, the plant would be safe, would require only two men to operate it, one for day and one for night, and that the only other expense would be the carbon from which the gas is generated.

The town of Edmonton is having a hard time securing a market site. The vote on the by-law for the purchase of the site on the brow of the hill just east of McCauley's stables was taken recently, and resulted in its defeat. The vote stood 71 for and 49 against, whereas a two-thirds majority was necessary to carry it.—Plaindealer, Strathcona, N.W.T.

The executive of The Canadian Manufacturers' Association at a meeting in Toronto the other day, passed the following resolution: "That this association regret the decision announced by the Premier, Sir Wilfrid Laurier, not to introduce at the present session a Dominion insolvency act, particularly as all representative classes of the manufacturing and mercantile community have desired legislation in that direction."

HE WANTS A FEW EXTRAS.

A Minnesota bicycle dealer, according to a contemporary, received the following from a farmer recently: "Dere Sur, I am in need of a few extres fur that there wheel. Yistiday she came down, and the wind all came out, the hoop partly come unglued from the wood, and I don't know ware the hole is, but I want some first-rate glue or wax; you no the best, my wheel is a single tube. Please send me a list of the different artickles. I have a catalogue here, but would rather bye of you, being closer to hum, if you can satisfie both partys. The hull wheel is sum bent, but I guess I can straten it out alrite. My geers is both 28 inches."

TRADE IN OTHER COUNTRIES THAN OUR OWN.

THERE has been considerable selling of Bessemer pig iron for the first six months of next year at $21, valley. For early delivery, considerably higher prices might be obtained, but very little iron comes out, and the large steel mills, which would be the main purchasers, realize the futility of coming into the market. It is a question with them of getting the iron which has been purchased and specified for, and, as long as deliveries are so far behind, the matter of buying for the last quarter is of no interest. Furnaces will end the year with a great deal of 1899 business still unfilled.—Iron Trade Review, August 10.

PIG IRON IN GREAT BRITAIN.

The quotations for pig iron continue to advance, and every week higher prices prevail in the markets for finished iron and steel. For delivery over the remainder of this year shippers of Rubio (Spanish) ore ask as much as 18s. per ton, c.i.f. Tees, and the Swedish Gellivare ore cannot be bought under 14s. Coke is certainly dearer, and is said to be scarcer than ever, and the advance in prices has not checked the continental demand for our pig iron. The cost of pig iron making has tremendously increased this year, but we do not suppose that the whole of the 50 per cent. put on to selling prices is absorbed by extra cost. It is more likely that the iron smelters are now making larger profits per ton of iron made than they have done since 1873, and while they have the field to themselves they are not likely to upset the market by running out more iron than the market will readily absorb at famine prices. A great deal is said and written about the scarcity of coke and its tremendous price, but coke was introduced into iron-smelting practice as an economy, and we know of no insuperable obstacle to the use of coal in iron smelting when it becomes necessary to revert to coal as fuel, because coke is too costly. It is the opinion of many competent observers that the price of pig iron here will continue at, or even above, the present level until we again attract supplies from the United States. In Cleveland, we know, under favorable conditions, No. 3 iron can be made for less than one-half the price at which it is selling to-day. At the prices ruling, directly a surplus is created in America, there will be a splendid market here for the iron.—Iron and Steel Trades Journal, July 29.

THE TIN MARKET FOR A WEEK.

Prices have fallen nearly 3c. per lb. in New York and about £8 per ton in London market during the past week. The decline seemed to have been in the nature of natural reaction from a most extraordinary advance, with more or less profit taking and not a little pressure upon values by operators who have been out of harmony with late upward movements in the market. A prominent feature was the transfer of a considerable quantity of tin from London to New York, partly in delivery on trades consummated some time ago, and preparations for additional shipments by following steamers. Naturally, consumers and dealers held aloof pending developments, and latterly did not bid within gunshot of sellers' figures, even for small quantities.

Towards the close there was a decided turn in the movements of large operators, some of whom bought freely late on Friday, paying 30⅝ to 30⅞c. for lots ex store and on vessels in port. They renewed their buying on Saturday, and had some company besides, under the influence of which 31c. was realized on actual sales. At the close no tin was on offer at less than 31c., and seemingly not a great deal at that price. At 31¼c. some might have been obtained.

The last official London quotations were £137 15s. for prompt delivery and £138 17s. 6d. for three months' futures on Friday, but private advices on Saturday quoted an advance of 15s. to £1 there, with active buying.—New York Journal of Commerce, August 7.

NEW YORK METAL MARKET.

COPPER—There was no sign whatever of any change in the favorable conditions that have existed for some time past. Deliveries continued heavy and involved all varieties of the metal, while more or less new business was effected at full prices, particulars of which were not divulged. This evidence of continued large consumption was accompanied by other unmistakable signs in the form of decided firmness in values, despite cautious buying by consumers and absence of speculative support. Lake Superior ingot sells readily at 18½c., and brings 18⅝c. in moderate quantities. Electrolytic bars, etc., go quite as well at 17¾c. Ordinary casting stock fetches 17½c. and up to 17¾c. is asked by smelters for some brands.

PIG TIN—London opened with 15s. rise on prompt delivery and £1 on three months futures, and brisk trading was reported in some cable advices. The later cables showed only slight reaction, and were without suggestion of change in the statue of the market. To a certain extent, New York prices moved sympathetically with the foreign quotations, but local conditions had some influence of their own in shaping values, and were mainly of a "bullish" nature. Business was reported at 32¼ to 32⅜c. for round lots, to moderate extent, and, at the close, 32½c. was the lowest price openly quoted by sellers, while 32⅝ to 32¾c. was generally asked.

PIG LEAD—For the day nothing distinctly new was reported here. Operations were of ordinary character and quite good volume, while offerings for early delivery continue light, with sellers firm on prices. Spot stock was at about 4.62½ to 4.65c.; August shipment, 4.60c., and September, 4.55c., delivered here.

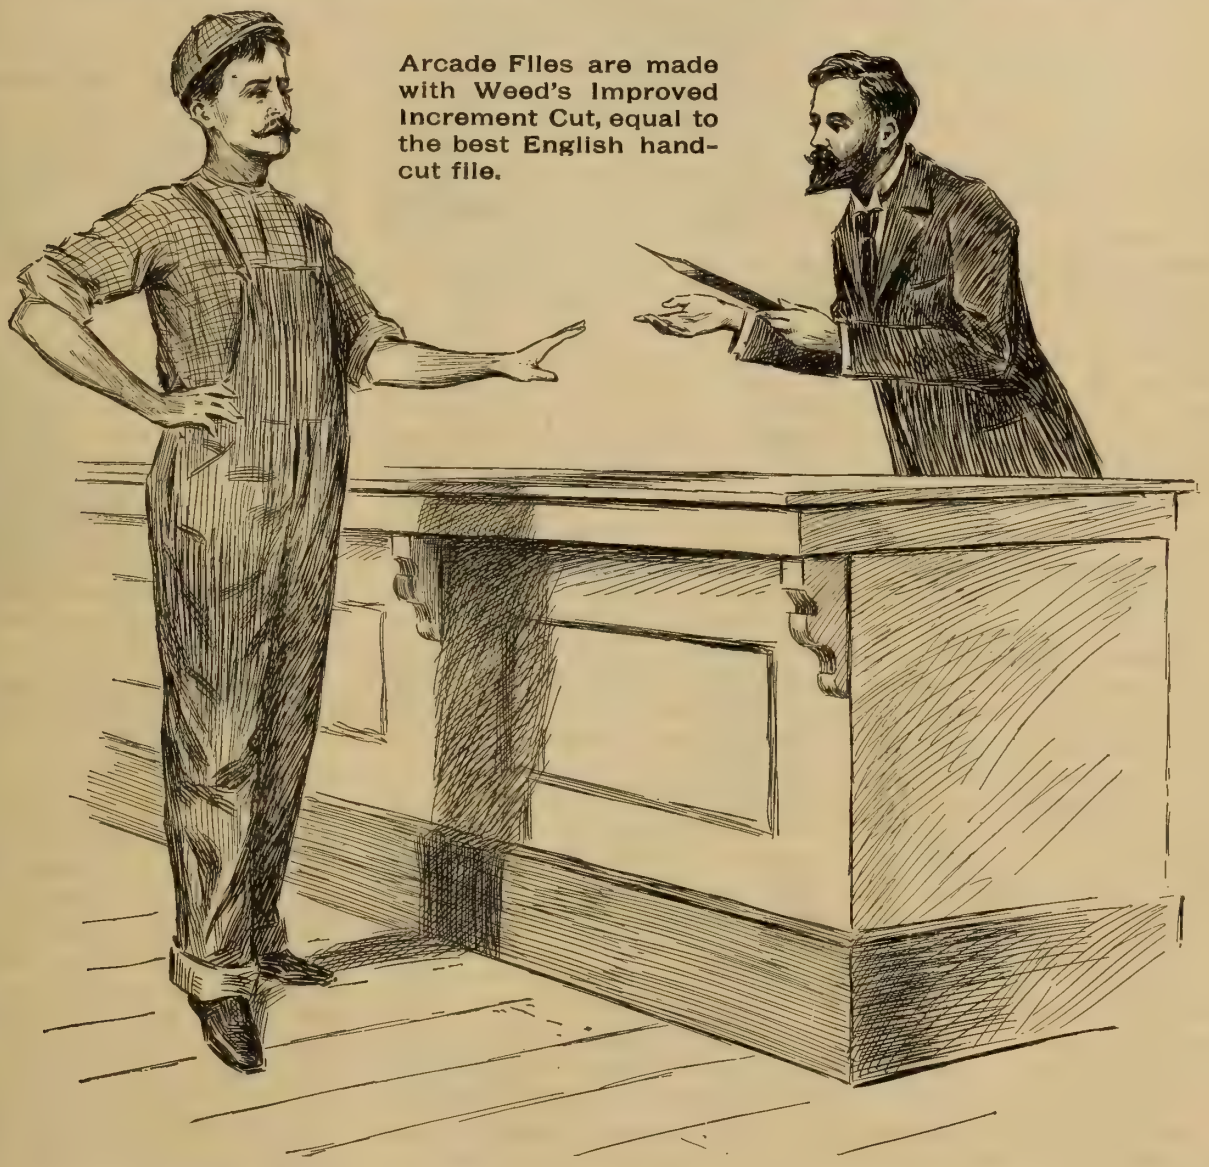
SPELTER—Merely fair business is being effected here at the moment, and the demand is rather slow as well. Prices are firm, however, owing to the condition of affairs at the West, with 6 to 6⅛c. quoted for spot stocks, and 5.75 to 5.90c. for future shipments, according to position, delivered here.

ANTIMONY—Regulus remains steady at 9¾ to 11c., as to brand, and is selling very fairly in a jobbing way.

TINPLATE—Fair sales were reported of American cokes from second hands at about $4.45 to $4.50 f.o.b. mill for early shipment. The business would probably have been larger but for the fact that comparatively little stock was obtainable. Manufacturers are taking only distant future delivery orders, and continue tardy with shipments. In short, supplies are inadequate for business satisfactory to buyers, and prices are very firm.

IRON AND STEEL—All branches of the market remain in good position, with considerable business passing, and prices very firm throughout.—New York Journal of Commerce.

IRON PIPE IN THE UNITED STATES.



Even at a discount of 50, 10, 10 and 5 per cent. it is difficult for exporters to obtain prompt deliveries of carload lots of wrought iron pipe. The few local speculators who had large stocks on hand when the price of pipe began to advance are all sold out, and now the foreign buyer must pay mill prices and take his chances on early delivery. It was said recently that during the week several substantial inquiries for export were in the market for various countries, but of these only one order was placed, and that was for several carloads for Eastern countries, and in order to take the goods from stock the purchasers here had to forfeit the last discount of 5 per cent. to assure shipment within a few days; otherwise two months would have been the time required to fill such orders from the mill. Pipe mills on the other side are equally as busy, and it is said that the same difficulty is being experienced in securing deliveries. The National Tube Works are to enlarge their offices in the Havemeyer building by taking the entire twelfth floor and a good part of the eleventh. — New York Journal of Commerce.

HEATING AND PLUMBING

PERFECT SEWERAGE AND PERFECT HEALTH.*

By W. R. Morrison.

PERFECT sewerage is one of the most important factors in the construction of a town or city, for on this may depend the future prosperity of the place; yet, with this known fact, how few towns or cities are laid out in a manner which recognizes this important factor. And, again, how few of the cities of the entire world are there that can say they have a perfect system of sewerage!

Having devoted a considerable amount of time looking into what are considered perfect systems of sewerage, I find that in my most earnest searches there are but few cities that have a perfect system. I wish that it was the law of the United States that commissioners should be appointed in every State composed of men who are well up in the question of perfect health and proper sewerage, their duties to consist of making thorough examinations of the sewerage systems in every town and city of the State.

The matter of laying a few cement pipes or building trunk sewers through the streets of a city does not make the sewerage system of that city perfect, as most people believe. These pipes may have a perfect grade and may discharge into some body of water at some distance from the city, and still I say to you that they have not a perfect system of sewerage. You ask what we have then? I will tell you. You have a system of condensing chambers for gases, you have a hatching machine for microbes of every description which, like everything else, are pushing out towards the light and air, and no sooner do they escape from their prison hatching grounds than some poor human soul comes along and absorbs them. What then you ask? The doctor. If by chance he happens to know just which one of these infernal microbes you have been unfortunate enough to swallow you are a well man almost immediately, but if he does not and there are a million chances that he does not, it means many weary weeks of sickness with the doctor using all his skill and energy trying to find out which one you took; until your vitality is all gone and life leaves your mortal body and you are laid at rest.

Now, as to a perfect system of sewerage and what it consists of, I will pass a few remarks. Of course, in the planning out a system of sewerage there are always the main trunk sewers and their branches. To have a perfect system there is only one way to make it so, and that is to erect at the end of each line of main or trunk sewer a large ventilating flue. These flues can be so constructed that they can be made the garbage reduction plants of the city and at the same time cause a draft which will help to keep the foul gases from concentrating in the sewers. By this system you insure clean sewers; having clean sewers means no microbes, perfect health, happy homes; and the latter mean a moral and prosperous city.

Having started with the main object of perfect sewerage toward perfect health, the next matter of importance is the house draining system, for this affects you all as individuals. Are not your wives and children the dearest things on earth to you, and should they not be protected from the evil effects of improper and unsanitary plumbing work in your homes, be they humble or grand? The lives of those dear ones are just as sweet to the laborer as to the highest and richest man in these United States, and such being so, too much can not be said towards the advancement of proper and sanitary plumbing and house drainage.

In starting in to have your plumbing work done, pick out your plumber, and great care should be taken in your choice of the man whom you are trusting to do your work. When you have decided on your man, be guided by him as to the construction of the work, as he knows what is best for your health; he has made it his life-study, and certainly should know what is best for you and yours. And let me say here that the plumber of to-day is not the plumber of the past; the plumber of to-day is a scientific man, ever on the alert, looking at the merits or demerits of every new invention that is placed on the market, and, if it is to be any good to the public health, he adopts it.

The selection of the sanitary fixtures for your house may be governed by your means, but the main part—the pipes, traps, and all the pipes used in the drainage ventilating work—should be of the best that can be bought.

If you desire to have your work done by contract, and the man you have selected gives you a price on the work, do not try to have him reduce his figure, as he has figured out just what you require to have a first-class job of plumbing put in, and if you reduce his figure he will cut down on the work, for the plumber, like all other contractors, is not giving his money away, and he can put in the work in such a manner that, sooner or later, it will cost you twice as much as he originally asked of you for a first-class job. If you must cut down on the cost of your buildng, do it on some of the decorations, but don't, I implore you, cut down on the plumbing work in your house, if you think anything of the lives of yourself and loved ones.

* Paper read at the convention of the Association of Master Plumbers of the United States.

PLUMBING AND HEATING NOTES.

ANTOINE BELANGER and Wm. Kelly have registered partnership as plumbers under the style of Belanger & Kelly, Montreal.

F. Duclos, plumber, Montreal, has assigned to Lamarche & Benoit.

The movable assets of D. Dugas, plumber, Montreal, are to be sold on August 14.

The Hamilton, Ont., Bridge Works are negotiating for a site on which to erect additions to their works.

Powell & Wideman, architects, Guelph, Ont., are preparing plans for remodeling a store for The Trusts and Guarantee Co.

T. J. Hepburn, architect, Stratford, Ont., is asking for tenders for extensive repairs to the St. Andrew's Presbyterian church of that place.

The recently opened tenders for the Woodstock, Ont., town hall were too high, and it is likely new plans and tenders will be asked for.

James W. Drake is superintending the erection of a new glass factory, 100 x 100, in Kingsville, Ont. Warerooms and workmens' cottages will also be erected.

Fred. T. Hodgson, Renfrew, Ont., is preparing plans for $5,000 repairs and alterations to the Queen's Hotel, Clarksburg, Ont. This building is to be fitted with up-to-date plumbing.

TORONTO BUILDING PERMITS.

Building permits have been issued in Toronto this week to Mrs. Ellen Sexton for a pair of two-storey brick residences on the south side of Pearson avenue, near Roncesvalles, to cost $2,500; to Geo. May, for a two-storey and attic brick dwelling at 7 Garden street, to cost $1,300; to H. E. Trent for a three-storey bank and office building, at the corner of Queen and Portland streets, to cost $4,500; to Mrs. G. E. Kingsinger for a two-storey and attic brick dwelling, near Queen street, on Lansdowne avenue, to cost $1,500.

SEND for specimen copy of Phillips' Monthly Machinery Register, containing over 5,000 entries of new and second-hand machinery of every description. The oldest established and most successful medium in the world. Established 25 years for the purpose of introducing those who have machinery for sale, to those who wish to buy, has a circulation of about 50,000 copies per annum, all over the world, and is used for continual reference by a large number of firms. It is consequently a most valuable advertising medium for all engineers and manufacturers. Subscription, 6s. per annum, price per copy, 6d. Sole Proprietor, CHAS. D. PHILLIPS, M.I.M.E., Newport, Mon., England. Telegraphic address: "Machinery, Newport, Mon."

PLUMBING AND HEATING CONTRACTS.

Rogers & Rogers, Summerside, P.E.I., have secured the contract of heating and and plumbing for the new Perry hotel in that town.

James Ballantyne, Montreal, reports the following contracts : Plumbing work, Tooke Bros. new shirt and collar factory, St. Henri; plumbing, heating and electric work of Mr. B. Tooke's new house, on the corner of Simpson and McGregor streets ; plumbing, heating and electric bell work of new summer residence for Mr. J. C. King, at Cartierville; plumbing and heating of new residence for Mr. L. J. Forget at Senneville; hot-water heating of two private residences at St. Laurent, Que.; hot-water heating of two private residences for Mrs. Jacobs, Victoria street ; extensive alterations to the steam-heating plant of the British-American Bank Note Co., Bleury street, and several smaller alterations. He reports prospects for the fall work good.

HE IS WORKING FOR NOTHING.

A story, which shows lack of business foresight, was told me the other day by a prominent jobber, which, I think, will bear repeating. A plumber in a large city tendered for certain work. Two months after putting in his tender the contract was awarded him. The work was not to be commenced for three or four months, so the successful tenderer laid the contract and specifications carefully away. About the time the work was to be commenced he went to his jobber to order his goods and the prices quoted staggered him. He actually had to pay more for his goods than he was getting for the contract. He protested, and then, in the course of conversation, the facts, already stated, came out. He had to have the goods and now he is working for very much less than nothing. I wonder if this man studies his trade paper. Perhaps not. His time is too precious.

SPOILING A GOOD FARMER.

A Chicago business man, according to an exchange, recently utilized a rather unique method of dismissing an employe. His bookkeeper had formerly been a farmer and had come to Chicago to enter the business world. His employer had thought him promising, but after a month's trial discovered his mistake. Then he wondered how he could get rid of him.

"John," said he one day, "you never let anyone beat you at plowing while you were on the farm, did you ?"

"No, sir," replied John.

"And no one ever got ahead of you at hoeing potatoes ? "

"No, sir."

"Well, I think my conscience won't let me keep you here, John. I'm afraid I am spoiling a mighty good farmer."

The "SAFETY"

ACETYLENE GAS MACHINE

manufactured by

The Safety Light & Heat Co.
DUNDAS, ONT.

What some of our friends say of us :

Dear Sirs,—The 10-light Safety Acetylene Gas Machine purchased from your Mr. Sparling has been in use in the office, composing and press rooms of the Vernon News since the beginning of the year, and it is giving excellent satisfaction. The light is clear, strong and much easier on the eyes than other forms of artificial light, and is admirably adapted for our purpose. The machine is easily operated and requires little attention. The automatic device for removing the ash from the carbide works to perfection. We find that there is no overgeneration of gas and consequently no waste. The ash is always dry when removed. Considering the volume of light we find it more economical than coal oil, and we can confidently recommend the Safety generator as a very excellent machine.

WORLD'S GOLD PRODUCTION.

The director of the mint at Washington has nearly completed his estimate of the world's gold production for the year 1898. The data at hand seems to warrant the conclusion that the production will amount to at at least $294,000,000, and possibly $295,000,000. Africa leads all other countries with $80,300,000, with Australia second with $67,500,000, and the United States third with $64,463,000. Russia is credited with $25,000,000, Mexico with $10,000,000, and Canada, including the Klondyke, with $14,000,000, In 1897, Africa produced $58,306,000, with the United States second with $55,863,000, and Australia third with $55,684,000, Russia fourth with $23,245,000, Mexico fifth with $9,436,000, and Canada, including the Klondyke, with $6,027,000. The total for that year was $237,505,000. Of the $14,000,000 credited to Canada in 1898, about $10,000,000 came out of the Klondyke, and, in the estimate of the production of the United States during the last year, $2,524,000 came from Alaska.

In 1896, and for nearly fifty years previously, the United States occupied the first place in the world's production of gold. In that year the output of the world was estimated at $202,682,000. These figures are subject to revision in making up the final estimate, but are believed to be approximately correct.

A FRONTIER GROCER.

Mr. G. R. Morden, representing The John Calder Co., Hamilton, has given HARDWARE AND METAL the interesting cut herewith shown, which gives an idea of a successful frontier store, of which Old John Black is proprietor. The sign itself is a bright idea, and the successful dealer in "groceries and guff" stands in the picture between the North West Mounted Policeman and his horse.

Old John has given the following interesting facts regarding his career. He has lived in the Northwest for 42 years, and is now well-known through that vast tract of country. For a number of years he was in the employ of the Hudson's Bay Co., but in 1885 he decided to start store for himself in Fort Macleod.

With a self-satisfied smile on his face, John remarked that he himself had hewed and placed the logs of his first little store, with a frontage of 12 feet. "Now," he said, "our store extends just seven times as far along the street, and our business has grown in proportion." Indeed Old John Black's store is one of the prominent features of Fort Macleod to-day. He is a self-made man, and has a steadily increasing business.

SCARCITY OF B. C. CEDAR.

The growing scarcity of fine cedar timb is making the price of that lumber go upwards all the time. Lumbermen are finding it more difficult to provide for the demand. In view of this fact the virgin forests of cedar, south of Vancouver on the Fraser, are coming into greater prominence for Coast mills are looking to this region for supply.

Mr. J. H. Veno, a millman of extensive experience, passed through Vancouver on Sunday bent on an enterprise of considerable interest to the people of Westminster and this city. From Mr. Veno it is learned that a big deal is pending whereby he means to obtain possession of several hundred acres of cedar timber lying about two and a half miles from the Fraser river and accessible by a trail to shipping. Mr. Veno has an option on the land and is on the inside track of the parties who own the tract.—The Province, Vancouver, B.C.

STAR

HACK SAWS
BUTCHER SAWS
BRACKET SAWS

THE STAR HACK SAW

Has a file temper, and one 5-cent blade will do more work than $1 worth of files. It will cut off an inch square bar of steel 100 times without filing.

THE STAR BUTCHER SAW

Will cut four times as long without filing as any other kind in use. It will cut off a half-inch rod of iron 30 times.

THE STAR BRACKET SAW

Is taking the place of all other kinds.

None of these Star Saws are to be filed, as the price is less than the cost of filing. They are taking the place of all other saws as fast as they become known.

For Sale by Most Hardware Dealers

We also make a Power Hack Saw which may be found in most machine shops and iron working establishments, and should be found in all.

THE BINDER TWINE SITUATION.

RETAIL hardwaremen throughout the country are not likely to reap this season the good profits on binder twine that they did last year. In fact, there is no question about it.

Last year they were handsome; this year they are the opposite.

In the first place, the supply is larger than it was last year, both the home and the foreign manufacturers being in the field to a larger extent. Then, as far as Ontario is concerned, the demand is not as extensive as it was in 1898, the wheat crop being less, while the straw is proportionately shorter than the yield of wheat. And, of course, the less straw there is the less binder twine is there necessary to bind it.

These conditions would naturally have a bearish influence upon the price of the stocks held, but this influence has been accentuated by the fact that a great many retailers throughout Ontario began peddling twine among the farmers in their respective neighborhoods, when they began to gather an idea of the prospects.

But while, however, the profits of the retailer are smaller than they were last year, those of the manufacturers are larger, for the prices at which they sold are higher than they obtained in 1898.

To-day, there are retailers in Toronto who are quoting pure manila binder twine as much as ¾c. per lb. below factory figures.

In view of the enormous yield in Manitoba it is possible, however, that the general condition of the binder twine market in Canada may improve. But that, of course, remains to be seen.

SCARCITY OF IRON AND STEEL.

There has been another advance in crude iron prices in the United States since a week ago, No. 1 foundry at Pittsburg jumping $2 the ton to $23 since last Wednesday. Billets also continue firm at $35, and all iron and steel material is the same. Some idea of the situation may be gathered from the fact that the Cramp shipyards at Philadelphia have been compelled to let off 1,000 men, not because there is no work for them, but owing to the fact that it is impossible to get delivery of iron and steel material sufficient for the the yards to carry out all their work. In Canada, also, similar instances have been noted, the work on the big Grand Trunk general offices in Montreal being blocked at present because the contractors cannot get delivery of the steel material for the big metal skeleton on which the masonry is to be constructed.

NEW CUSTOMS REGULATION ON HARDWARE.

The Montreal Metal and Hardware Association held a special meeting this week, President McMaster in the chair, to consider an anomaly in the Customs regulations regarding metal and hardware. As is well known, the rules permit the Department to collect duties based on the market price of the article imported, and not on the face value of the invoice. Of late the rule has been more or less inactive, but, now that prices of hardware have been advancing by leaps and bounds, it is being put into force. Importers have from time to time made purchases for future delivery, and in many cases the present market price is anywhere from 10 to 100 per cent. higher than what the goods coming in were bought at and paid for. Until a fortnight ago these goods have been coming in at the prices at which they were invoiced at, and not the current market value. Now, however, the Department has decided that the regulations shall be put in force. So far, only the large ports of entry have been notified of such a change, and the Montreal association at Tuesday's meeting decided to make representations to the Minister of Customs, urging him to enforce the regulation in question at all ports of entry, so as to obviate discrimination against the importers at large ports of entry, as contrasted with those who declare and clear their imports at the smaller subports. This is the old matter of a uniformity of appraisement which HARDWARE AND METAL has long urged, and the only way to secure its practical application is to have a Dominion board of appraisement. Otherwise injustice will be certain some time or other under the enforcement of the regulation under consideration.

BRIGHT TRADE CONDITIONS IN CANADA.

IT is no exaggeration to say that never in the history of the Dominion were the trade conditions so good or the auguries for the future so promising.

The manufacturing industries have certainly never before reached such a high state of development, and they were certainly never so busy.

The difficulty with them now is not the securing of orders, but the filling of them. This is true of every branch of the manufacturing trades. Then merchants, wholesale and retail, have not much cause for complaint. They have, for some months, been experiencing a brisk trade, while payments have been as satisfactory as they have probably ever been.

The agricultural industry, which is after all the chief industry in the country, is in a better condition than for many years. The price of wheat is 1c. per bushel lower than it was a year ago, but cheese, butter, eggs and bacon are dearer than they have been in August during the last six years. In fact, one of the best evidences as to the condition of the farmer is the general manner in which he is repairing old buildings and constructing new.

The lumber industry is perhaps not as brisk relatively as most of the other staple industries of the country, but a good business, and one that is decidedly the best for some years, is being done. The demand, both at home and abroad, is better. Mail advices from Liverpool show that from January, up to July, the aggregate tonnage of lumber received from British North America was about 27,000 tons in excess of the same period last year. The exports of lumber the produce of Canada during the fiscal year ending June 30 last were $28,025,487, compared with $26,533,060 the preceding year, an increase of $1,492,427, or nearly 5¼ per cent.

Turning to the mining industries, they are beyond all peradventure in a more active condition than ever. This is particularly true of the gold, coal and copper mines.

One of the best barometers as to the commercial condition of a country like Canada is its railways. And in the reading of these we again find food for satisfaction.

The gross earnings of the two great systems in the country aggregated, for the seven months ending July 31, $29,171,761, against $26,887,880 for the same period in 1898. The earnings of the Grand Trunk were $14,116,398, against $13,240,498, and of the Canadian Pacific, $15,055,363, against $13,647,382.

Still another reliable trade barometer is the bank clearings. Leaving out of the comparison the cities of Victoria and Vancouver, which in 1898 had no clearing houses, we find that the aggregate clearings for the seven months ending July 31 were $874,737,024, an increase of 9.5 per cent. over the same period in 1898, and of 26.5 per cent. over 1897.

Turning to the exports of goods, the product of the Dominion, for the fiscal year ending June 30 last, the aggregate figures are not as favorable as those of the preceding year, being $6,726,588. But when one comes to analyze the figures there is more in them for congratulation than for commiseration. Here is a table showing the exports, for the two years, of home products, exclusive of bullion and coin :

	1898.	1899.
Mine	$13,998,655	$13,351,064
Fisheries	10,793,852	9,947,957
Forest	26,533,060	28,025,487
Animals and their products	44,242,825	46,688,229
Agricultural products.	33 234,004	23,014,314
Manufactures,	10,455,289	11,457,162
Miscellaneous	146,894	201,478
Total	$139,402,279	$132,675,691

The decrease, it will be noted, is more than accounted for by the falling off in "agricultural products." And the depreciation in the latter is neither due to the want of a market abroad or the want of the material to export : It was due to the activity of the home demand and to the fact that farmers were in a better position to hold their wheat and did so. And many of them are holding it yet. The increase of over $2,400,000 in animals and their products, of $1,500,000 in products of the forest, and of over $1,000,000 in manufactured goods may be accounted pretty good salve for the decrease in other particulars. But if that should not be sufficient it might be pointed out that the total export trade of the United States also fell off during the past fiscal year. And yet we know that the commercial activity experienced by that country during the fiscal year 1899 was the greatest in its history.

AN UNBUSINESSLIKE HOUSE.

IF the business transacted during the session of the Dominion Parliament just closed, was in proportion to the length of the session, the country would scarcely suffer if the House did not meet again for two or three years. But, unfortunately, there was no such proportion.

The House was in session five months, and the solid business transacted during that time could easily be crowded into five weeks.

The members were sent there to transact business, but business was the exception and party strife the rule. And in the party combats some of the members managed to keep their tongues going as many hours a day as a laborer is expected to wield his pickaxe.

The average member seems to have about as little concern for the business interests of the country as he has for the welfare of the party on the other side of the House.

The people of this country do not send representatives to Ottawa to rehash stump speeches which have already probably been rehashed a score or more of times. Neither do they send them to pass resolutions to prove the loyalty of this country to the Empire. The Empire is already possessed of the proof of this. Nor did they send them to the capital to libel each other in a way that would land them in goal if uttered outside the precincts of the House. They sent them there to do business. Because they did those things which they ought not to have done and left undone the things they ought to have done they are deserving of the strongest censure. And the business men in every constituency throughout the country should not hesitate to express to their respeciive representatives their displeasure at the unbusinesslike practices which were so characteristic of the last session of Parliament.

THE SCARCITY OF WORKINGMEN.

ONE result of the industrial activity noted this year is the general scarcity of labor. British labor statistics for June show that, during that month, the percentage of unemployed in Great Britain was smaller than in any month since 1890. During this month, changes in the rates of wages of about 51,500 workpeople were reported, all of whom received advances. The increases were mainly in the iron and steel, tinplate, and textile trades. Changes affecting about 5,200 workpeople were preceded by disputes, causing stoppage of work.

The Ironmonger, in commenting on the conditions of trade in Sheffield, states that two phases of the labor question are exciting interest in that city. One is the serious shortage of workmen in the rolling mills and heavy iron and steel branches, and the other, the unprecedented amount of Sunday labor which has lately been necessary. It is stated that 1,500 men work throughout every Sunday in five or six of the great works, mainly in the armor departments, and to a less extent on ordnance and engineering. It is also alleged that these men work 12, 18, and even 24 hours at a stretch, and that many of them get no Saturday respite.

A director of one of the large works concerned stated in an interview that the employers are doing all in their power to extend their plant, in order to enlarge their ordinary workingday output, but are literally compelled to work their men on Sundays.

The Metal Worker, in an article on the Central Western States, states that workingmen are in active demand in that district. Many establishments are unable to get out their full product because of a shortage of men. The scarcity is not confined to skilled workmen, but common laborers are also in extremely short supply. Instances are cropping out of blast furnaces and rolling mills just starting up whose operations are seriously handicapped for the want of sufficient workmen.

The same conditions are observed in the industrial centres of Canada. Not for years have there been as few unemployed as is the case to-day. The Inspector of Factories for Ontario, in a recent interview, stated that it was the rule, rather than the exception, this year for factories to be working late into the night.

In Toronto, the improvement to the streets has been delayed, owing to difficulty in securing unskilled labor. In nearly all of the building trades there is a shortage of labor.

Most of the iron and steel manufacturers in Montreal, Toronto, Hamilton, Brantford and London have raised the wages of their employes 10 per cent. or more.

PIG TIN REACTS.

THE pig tin market has recorded considerable reaction during the past week, prices at Singapore dropping £4, to £143, and at London £2 10s., to £143 7s. 6d. Whether this is the beginning of the reaction that some students of the market have predicted is difficult to say, but it certainly seems unreasonable to expect that the frantic advance in tin, which is clearly due to manipulation, can be maintained. The following statistics from The Iron Age give the visible supplies, shipments from the Straits, and quotations by the month for the period covered by the operations of the French syndicate and the present movement :

	Visible supply at the first of each month.	Shipments from Straits during month.	Quotations at end of month. New York.	London. £	s.	d.

A SILLY ARGUMENT PRICKED.

AS everyone who has at all studied the matter knows, the route to China and Japan is much shorter from Vancouver than from San Francisco.

This fact has made the Canadian route to the Orient so popular as to incur the displeasure of some of the newspapers in California. Naturally, they have been looking for arguments in favor of the route from their own country. And the conclusions the Seattle and San Francisco papers have arrived at are to the effect that, while the Canadian route is the shorter geographically, this is minimized by the fogs and storms which are alleged to prevail on the northern route.

If this were so, the time occupied by the steamers, in making the respective routes, would reflect it. But figures which have recently been published show that they do not. The following table gives the average time taken by the steamers on the Canadian route during the years 1895 to 1898 :

	West-bound. Hrs.	Min.	Ea t-bound. Hrs.	Min.
1895	303	41	285	16
1896	303	30	289	32
1897	298	36	287	44
1898	302	32	287	16

Now the schedule time of the boats running from San Francisco and Yokohama via Honolulu is as follows : West-bound, 439 hours ; east-bound, 363 hours. On the basis of this time and the distance via Honolulu the schedule time between San Francisco and Yokohama direct would be ; Westbound, 425 hours ; eastbound, 351 hours. The speed of the San Francisco lines, according to their schedule is : West-bound, 12½ knots ; east-bound, 12.9 knots.

The boats running from Vancouver, which are of course owned by the C.P.R., easily maintain an average speed per annum of 14½ knots west-bound and of 15 knots east-bound.

If the Seattle and San Francisco papers want to create arguments that will tell against the Canadian route to the Orient, it is obvious they will be compelled to construct it out of better material than they have hitherto.

Perhaps we may be able to help them. Everyone knows the air of the ocean is pure and bracing, and that, therefore, the longer you are on it the better. We merely suggest this as an outline. The San Francisco and Seattle papers can do the filling in.

ABOUT CLERKS.

THE following opinions, written for an exchange by a merchant, are well worthy the attention of not only the clerks, but employers generally :

Help.—It is a mistake to employ clerks who do not properly look after their employer's interest. A customer gets his impressions of the house by the treatment he receives from its clerks. He may be repelled or drawn towards them.

Attracting Trade.—A business, to be successful, must have power to attract and hold custom. A clerk who fails to do his share in this direction is a positive injury, and should be dismissed.

Elements of Success. — The success of many men in business has not been solely their shrewdness, but ability to correctly read human nature and surround themselves with efficient and reliable help.

Qualifications.—Some of the qualities of the good clerk are loyalty to his employer, alertness in attending to the wants of customers, politeness and geniality of manner, honesty and industry.

Disloyal Clerks. — The disloyal clerk should be promptly discharged. He may be bright, intelligent and industrious, but he will do his employer harm. He will be continually making unfavorable comparisons between his employer's business and others in the town, sparing no pains to inform those who will listen to his twaddle how much better the business might be run. Nothing suits him about the store and he scatters the seeds of discontent among his fellows.

Artful Dodgers.— The clerk who dodges out of sight when a customer enters, instead of approaching him with a smile and pleasant word, is also a hindrance.

Bashful Clerks.—It may be diffidence or natural disposition which keeps him in the background and allows his less experienced comrade to go to the front, but the employer should keep his eye on his men and encourage the timid ones to throw off their modesty and always be prepared to greet people promptly.

Courteousness—Politeness and geniality go a long way in holding trade, but with it the clerk must be well informed and qualified to intelligently explain the goods he attempts to sell. Gruffness and curtness are calculated to repel buyers.

Punctuality.—Promptness in sending out parcels has much to do with the welfare of a business.

An Instance in Point.—A party bought some goods at a store and asked that they be delivered that evening. Through carelessness of the clerk, however, who waited upon the lady the goods were not sent as requested. The next day was very rainy in the morning and it was supposed that noon would do. But before that time the customer, who probably thought the establishment considered her unworthy of credit, called and informed the salesman that he need not trouble to send her parcel, adding that there were other hardware stores in town, leaving the store without waiting for explanations.

ALUMINUM IN ANTIQUITY.

AN incident in Roman history is recalled by The Stoves and Hardware Reporter, which seems to indicate that aluminum, instead of being new, may be only another new discovery of an old process. It is related by Pliny that during the reign of the Emperor Tiberius a certain worker in metals appeared at the palace and showed a beautiful cup made of a brilliant white metal that shined like silver. In presenting it to the emperor the artificer purposely dropped it.

The goblet was so bruised by the fall that it seemed hopelessly injured, but the workman took his hammer, and in the presence of the court speedily repaired the damage. It was evident that the metal was not silver, although almost as brilliant. It was more durable and much lighter.

The emperor questioned the man, and learned that he had extracted the metal from an argillaceous earth—probably the clay known to modern chemists as alumina. Tiberius then asked if anyone besides the worker knew the process, and received the proud reply that the secret was known only to the speaker and Jupiter.

The answer was fatal. The emperor had reflected that if it were possible to obtain such a metal from so common a substance as clay, the value of gold and silver would be reduced, and he determined to avert such a catastrophe. He caused the workshops of the discoverer to be destroyed, and the luckless artificer to be seized and decapitated, so that his secret might perish with him. It is quite possible that the wanton cruelty of Tiberius deprived the world for a long time of the valuable metal known as aluminum.

There are other accounts which come down to us of castings which the ancients made in metal, the process of which has been entirely lost. That this casting was done on a gigantic scale, equal to or exceeding anything in the present day, is evidenced by the existence of huge iron pillars, the date of whose manufacture is unknown, but which are still standing in different parts of India. The application of metals to industrial uses, in a more or less crude form, dates from almost the beginning of time.

AVOID CHANGES IN SALES FORCE.

IT is certainly not advisable, says The Stoves and Hardware Reporter, for the merchant to make changes in his sales force unless he is absolutely compelled to by unavoidable circumstances. Owing to a restlessness and frequently exaggerated desire on the part of clerks to change around under the delusion that they are bettering themselves, it is inevitable that the merchant should be obliged to employ clerks who are not always as competent or satisfactory as the old ones. But where it is possible to retain clerks who are competent in most respects, it should be done ; for, the longer a clerk is in one position, the better he is fitted to serve his employer and promote the interests of the business as well as his own. Countless blunders are made by new clerks, who are unacquainted with prices, location of goods and methods of selling them. Customers are continually annoyed by this ignorance, and business is often delayed by it. Employes who have in turn become employers, and who have risen to positions of prominence in the commercial world, have made it a point to remain with the same firm when they saw the possibility of securing what appeared to be better positions elsewhere, but which in reality would not be as advantageous and secure as the one they had. Of course, there are many exceptions to this rule, but it is a good plan for the merchant to make every effort to retain clerks who have an intimate knowledge of the business, and it is also well for the clerk to regard it as a stroke of diplomacy to make himself indispensable to the business and become conversant with all its various departments. Though conscientiousness is one of the most desirable attributes which an employe can possess, it is for almost that very reason one of the rarest. When it is discovered in a clerk, he may be considered a pearl of great price, which should not be parted with under any consideration. Real worth and merit are the most valuable things in the world, and should, therefore, receive due consideration and adequate remuneration.

THROUGH FAILURE TO SUCCESS.

THE following story, told by Brains, is true from beginning to end, and it tells how one man made a success out of a failure: "A young man being compelled to leave college because his father could not afford to keep him there, took a position as office boy in his father's office. By keeping his eyes and ears open and his mouth shut, he learned many things about the inside workings of the business of which he had never dreamt. He always supposed that his father's business was making money, but he soon found that, instead of making, the business was losing. His father was borrowing on the outside for the support of the business.

"A year or so after the son began his business career, his father failed for many thousands of dollars. The strain under which the 'old man' had been laboring was too much, and his health gave way. The support of the entire family fell upon the son, but instead of looking for employment in a line of business of which he knew nothing, he went to his father's creditors and requested that he be allowed to continue the business for a short time. So earnest was his appeal and so forcible was his talk on his father's failure, the previous conduct of the business, and what he believed he could do with it that the creditors agreed to let him try his hand for a short time. The worst period of the year was just approaching, but, undaunted by the outlook, he started the work of putting the business on a paying basis. He recognized one grand principle of success, and that was to make every one of his employes earn more than his salary for the business. He insisted on strict economy, and he carried out the latter principle to almost a miserly point. But the little savings in every quarter amounted to quite a large item at the end of the month. Some of the older employes in the establishment told him in a friendly way, that he would turn out to be a slave driver and a miser if he were not careful, to which he always replied that he was doing it then so that he would not have to do it later on.

"One month after the son had taken charge of the business he went to the creditors with a detailed statement. He had lost money, but not as much as his father had during the preceding month, which, by the way, was a better month for the business. He was allowed to continue for one more month, at the end of which time the creditors declared they would quit unless he came out at least even. By cutting and shaving and saving a little more here and there, he managed to come out even at the end of the month, much to the surprise of his creditors. From that day on he made the business pay, not so much by increasing the volume of trade as by making that which he already had carry the business along.

"A small business, started in a small way, gradually pushed to the front, is far more apt to become a success than the one which is started with one grand blast of trumpets and beating drums and then left to fall back for business on the first great hurrah."

PAINT ADAPTABILITY

is an important factor in paint-making and paint-selling.

One paint for all surfaces will not do. A "paint all" is as impractical as a "cure all."

It has therefore been our life study to make a separate paint for each surface. We have taken into consideration the varying conditions, have made chemical and practical tests without end, until to-day we stand ready to supply every possible painting demand with its best and most adaptable painting material.

Each one of these paints represents the highest development in paint-making. For covering capacity, durability, easy-working qualities, economy, beauty and uniformity in color they all far excel any other goods on the market.

BETTER THAN THE KLONDYKE.

Two years ago the wheat crop of Manitoba and the Northwest Territories was placed at 16,000,000 bushels. Last year it was about 25,000,000 bushels.

This year, it is estimated by competent authorities, such as W. W. Ogilvie, the Montreal flour miller, that the crop will be at least 40,000,000 bushels, and, if favorable weather continues throughout the next few weeks — the harvesting period, the production will be fully 50,000,000 bushels.

The wonderful wealth of the Klondyke has often been extolled of late. This year the clean-up is estimated at between $12,000,000 and $20,000,000.

It can be seen at a glance that the wealth of the wheat areas of the Northwest is still greater than the golden regions in the valley of the Yukon.

What this remarkable development of our wheat areas means to the business men of both Western and Eastern Canada will be harder to figure out. One of the first results of good crops is always increased demand for the necessities and luxuries of home life. And this case is not likely to be an exception.

MORE IRON WORKS FOR SYDNEY.

A despatch from Sydney, C.B., says that another huge iron and steel works, eclipsing even the Whitney establishment now being erected at Sydney, will be located at North Sydney. Information has been received from England that a deal is about to be consummated to merge the Nova Scotia Steel Company, of New Glasgow, N.S., and the General Mining Association. The latter is the oldest coal company in Cape Breton. The directors are Englishmen. Its mines are at North Sydney. A representative of The Nova Scotia Steel Company has been in England for some time consulting with the directors of the coal company. The new concern's plant at North Sydney will include a shipbuilding plant, steel rail plant and dock. The company own iron mines at Belle Isle, Newfoundland, and it is said that 300,000 tons of ore have been sold in Europe for immediate delivery. The concern will have a capital of $25,000,000, principally English. The price to be paid for the General Mining Association coal mines is not stated.

BRAINS IN BUSINESS.

MANY of the most successful means to success have been chance hits, which those who have profited by them have had the wisdom to make the most of; but we do not remember ever coming upon a circumstance of this nature that was based upon quite so apparently trivial cause as one related in our New York contemporary, Hardware. A certain tradesman found, it is related, in a consignment of wrapping paper for use in his shop an odd roll of a bright red color, which, by some mistake, had got mixed with the more sober hued article he was accustomed to use. Instead of sending it back or putting it aside, as he was first disposed to do, and as most men would have done, an idea occurred to him as bright as the paper itself. Saturday was approaching, a big shopping-day in the market town in which he lived, and he advertised a special sale for that day, sprinkling his advertisement with the mysterious words, "Watch the Red Bundles." Then he distributed the brilliant wrapping paper throughout his shop, and gave orders that no other was to be used. The mystery of the enigmatical lines in his advertisement first directed general attention to his shop, and as the gay-colored parcels began to appear on the streets, more and more people flocked to "Murphey's," and more and more lively grew the thoroughfares. The result was big business, and any amount of outside talk and questions and explanations. Everyone who was carrying a red-covered parcel had to explain how and why, and the shopkeeper telegraphed that very afternoon for some more of the red paper, and he still keeps that line standing in his advertisements: "Watch the Red Bundles." He has made a fortune, and he traces it all, or nearly all, to that lucky mistake which gave him his first big start. But if he had not had a few brains he would probably have missed the chance after all.

COPPER AND ITS MANUFACTURES.

No class of our exportation shows a more rapid growth than that of copper, says an exchange. This is due both to the increased demand in all parts of the world for copper, which has arisen largely by reason of the increased use of electricity, of which copper proves the most acceptable conductor, and to the further fact that the United States has become the world's largest producer of copper ore, and that of a superior quality. The bulk of the exportation of copper, while classed as manufactures, goes abroad in the lowest form of manufacture, namely, ingots and bars. Naturally a very large proportion of the copper exported goes to European countries, which, in 1898, took over $30,000,000 worth of the $31,075,636 worth exported in that year, $8,079,164 going to the United Kingdom, $8,081,661 to the Netherlands, $6,770,671 to France, $3,704,937 to Germany, and $3,270,549 to Belgium. Under the head of manufactures of copper, the total exportation in 1898 amounted to $1,105,236, of which $298,584 went to the United Kingdom and $620,083 to Canada. Of brass, which is composed of about two parts copper and one part zinc, the exportations have also grown very rapidly during the decade, having been in 1889 but $321,137 in value, against $1,320,093 in 1898.

Use Gilbertson's Tinplates

for the following reasons:

They are heavily coated with Tin.
They are of soft Siemens quality.
They are noted for deep stamping qualities.
They are the best for canning purposes.
They cost NO more than inferior brands.

Gilbertson's make the following brands and qualities:

"Gwyned," Coke Finish,
"Regina," Coke Finish,
"Comet," Charcoal Finish,
"Lincoln," Charcoal Finish,
"Crown," Charcoal Finish,
"Pontardawe," Best Charcoal Finish.

BE PARTICULAR to ask for these brands when ordering from your jobbing house. They can be supplied in all sizes and weights.

GILBERTSON'S TERNEPLATES

"Regina" brand

This is a superior plate and heavily coated—a good roofing plate that will give satisfaction to your customers.

Large Assortment. Graham Wire and Cut Nails are the Best. Close Prices.

THE CHANGES OF THE WEEK.

THE following changes in prices or discounts show that the market is firm throughout, with an upward tendency manifesting itself in all lines changed :

ALL ROPES DEARER.

Owing to the blockade of Manila, the manufacturers of rope the world over are already short of material. This has resulted in higher prices everywhere. In Canada, manila and sisal ropes are both 1c. dearer, while New Zealand has advanced 1½c. New Zealand is now quoted at 11c.; sisal, 7-16 in. and larger, 11½c., and manila, 7-16 in. and larger, 13c. Lath yarn has also been advanced from 8¾ to 10c., a rise of 1¼c. this week.

STEEL WIRES UP.

The manfacturers of smooth steel wire again advanced the price of smooth steel wire, oiled and annealed. The price is now $3, as compared with $2.85 quoted last week, which shows an advance of 15c.

The discount on fine steel wire has been reduced from 25 per cent. to 17½ per cent. factory.

Clothesline wire, too, is higher, the price now being $3.30, as compared with $2.75 to $3.

One of the greatest advances of the season has been made by the manufacturers of picture wire, which has been advanced fully 150 per cent. The extent to which this advance will be followed by Canadian jobbers will depend largely on the stocks they hold at present. The estimated consumption of picture wire in the United States and Canada is but $100,000. This, distributed amongst a number of factories, does not mean very great business, but the advance just noted will swell receipts considerably.

WHITE ZINC PAINT DEARER.

Jobbers and wholesale dealers have advanced the price of white zinc paints 1 to 1½c. Pure white is now quoted at 8 to 9c.; No. 1, 6 to 7½c., and No. 2, 5 to 6½c.

LINSEED OIL ADVANCED.

Linseed oil is advancing in England. The United States market is unchanged, but prices there are too high for competition in this market. The result of these conditions is an advance of 1c. per gal. in both Montreal and Toronto markets. The price at both points is now 58c. for raw and 61c. for boiled.

TURPENTINE HIGHER.

In sympathy with steady advance in the primary markets, the price of turpentine has been advanced 4c. per gal., the price in Montreal and Toronto now being 76c. Three weeks ago turpentine was quoted at 64c., so the advance for three weeks amounts to 12c. per gal.

HINGES HIGHER.

Canadian makers have raised the price of heavy T and strap hinges 1c. per lb. The 4-inch hinges are now selling at 6c.; 5-inch at 5¾c.; 6-inch at 5½c.; 8-inch at 5¼c., and 10-inch at 5c.; wrought butts have also been advanced.

M.L.S. TINPLATES ADVANCE.

The price of M.L.S. tinplates has been raised 25c. per box. The prices for this week are : I.C., $6 50; I.X., $7.75; I.X.X., $9.

MISCELLANEOUS ADVANCES.

Lanterns have been advanced 50c. The prices now ruling are : $7.50 per doz. for "Cold Blast," and $8.50 per doz. for "Wright's" No. 3.

The past week has witnessed a large increase in the price of sash weights. Sectionals have risen from $1.75 to $3.25 per 100 lb., and solids from $1.25 to $1.50.

Japanned and N.P. door knobs have been advanced 10c., the price quoted now being $1 per doz.

Copper bull rings, 2½-in., have advanced 10c. They are now selling at $2.50.

DISCOUNTS REDUCED.

The discount on cast steel and malleable Canadian rakes has been reduced from 60, 10 and 5 per cent. to 60 and 10 per cent., revised list.

The discount on Canadian locks has been lowered from 50 to 45 per cent.

Discounts on steel black M. and carriage section wagon box rivets, etc., have been reduced from 60 to 55 per cent.

The discount on Broad's draw knives has been dropped from 75 to 60 per cent. That on Warnock's has been changed from 50 and 10 per cent. to 60 per cent.

Wrought brass butts are now net, revised list, whereas, last week, there was a discount of 10 per cent., revised list. The discount on first joint wrought steel butts is lowered from 70 and 10 per cent. to 60 and 10 per cent.

WINNIPEG'S JULY TRADE.

During July last Winnipeg exported goods to the value of $167,859, as compared with $112,015 in 1898, showing an increase of $55,844, almost 50 per cent.

In the same month the imports of that city amounted to $766,279, as compared with $698,927 last year, showing an increase of $67,352, or about 10 per cent.

COLLECTING OLD ACCOUNTS.

IT appears that an unpaid bill of long standing keeps the debtor away from the creditor's store as effectively as though a plague were raging there, says The Dry-goodsman.

How unfortunate it is that debtors who may be unable to pay, have not got the gumption to tell a merchant plainly that they are unable to pay their bills, that they will do so just as soon as they are able, and that until they are able they will continue to trade with their creditor and pay cash for what they buy. Action of this nature would rob bad bills and losses of their sting.

When a person fails to meet his bills, and through this cause ceases to deal with his creditors, the creditor should not hesitate to speak to the debtor regarding the matter, and say: "Mr. Can't Pay, you know you owe me for some goods bought of me. I realize the fact that you cannot pay me just now, but I know that you will do so just as soon as you are able. Now, I want you to keep on trading with me. Your cash trade is just as good to me as anybody else, and I believe I am entitled to it. I won't bother you about that bill. I know it will be all right some time."

If you succeed in getting their trade back, just treat them as though they didn't owe you a penny. You may find it profitable.

Business rivalry in a town should not prevent the merchants in a town from having a little credit bureau of their own. They should exchange confidential reports to each other regarding the accounts and standing of the people in the community, but the privilege should not be abused by anyone.

When mortgages on crops are taken as security for goods sold it can hardly be considered a credit transaction, although many losses are entailed when crops prove failures. It would be advisable when a doubt exists as to the quality of such security to have an extension clause in the mortgage covering crops for two or more successive years. In this way a merchant continues his protection at least a year longer.

Many merchants cannot afford to give credit even though they may feel disposed to do so, because of their limited capital.

The refusal of credit should always be made in such a way as to give no offence to the person asking it.

Refusing credit in a cold or harsh manner reacts strongly to the disadvantage of a merchant, as those who are refused may speak ill of a merchant who refuses them, and being spoken badly of is not conductive to the profit or progress of any man, be he a merchant or not.

A very safe plan for a merchant beginning business, or even an old-established one, to pursue is to limit his credit to an amount that will approximate his net profit on cash sales. By closely following this rule, he will be always in a position to keep up very satisfactory communication with his own bases of supply, and, should a merchant's creditors press him hard occasionally, he will find it very convenient to be able to show a stock of goods equal or excessive in value to the amount of their claims. A merchant will find this to be a splendid implement to extend the patience of his creditors should it be necessary.

Summing up the credit question, it may be likened unto a business tonic, which, used according to the directions of prudence and wisdom, proves very healthy to business, but used without much consideration and in an uncautious manner, proves very disastrous and destructive.

WOMEN AS INVENTORS.

Some of the most valuable, as well as important, inventions, have been patented by women, among which may be numbered the first cook stove, a permutation lock having 3,000 different combinations, a machine for making screws (invented by a little girl), which revolutionized that industry, and the valuable Burden process of making horseshoes, which resulted in a saving over the old process of many millions of dollars per year. The first patent to a woman was granted in 1806, and since then the number has increased to many thousands. These facts are interesting not only because indicating the rapid and almost marvelous growth of woman's intellect, but also from the fact that the inventive genius of women invades fields one would scarcely credit her with any interest in, much less knowledge of. We would not be surprised that a hatpin, a corset or a glove-fastener, should be invented by women, but when we learn that such inventions as telescopes, making marble from limestone, dams and reservoirs are evolved, people begin to be interested. In Canada, also, women are becoming interested in inventions, as is evidenced by the number of women applicant seeking patents through Marion & Marion, of Montreal.

A HOT WEATHER PUN.

A leading iron firm that sends out a weekly bulletin on metals has, according to The American Artizan, perpetrated a clever mot in the last issue of the same, as they say, referring to the week ending August 5: "During the week mercury has been the most active of metals and has reached the century mark without apparent effort." Lead and iron and zinc and tin may all be climbing rapidly, but they will have to take their hats off to the metal named.

WILL THERE BE A PIG IRON FAMINE?

It has frequently been reported that a pig iron famine is imminent. Taking the figures of the weekly production of the country, compiled for the month of July, and it seems almost incredible. All the available furnaces in the country are now in blast. Now and then a number of those running will have to be taken out of blast for repairs. New furnaces of enormous capacity are under construction, and these will add 3,600 tons per week as each is put in blast, while many other furnaces are being enlarged.

The weekly capacity is 269,032 gross tons, which, multiplied by 50 running weeks, gives a total capacity of 13,451,600 gross tons. Taking the losses of pig iron while it is being reworked into finished shapes, which is sometimes estimated at 10 per cent., and there still remain something over 13,000,000 net tons of finished material. Is the country consuming and exporting this amount of finished material? Estimating the price of material at $35 per ton, and the 13,000,000 tons of finished material will approximate $445,000,000, but at ruling prices it will be found that $500,000,000 for steel and iron products will be nearer the correct figure, providing present prices continue for one year. It is doubtful if a pig iron famine will result in this country, although it is well known that under present conditions there is none to spare for export. —American Manufacturer.

A UNIQUE FOUNTAIN.

At the Greater Britain Exhibition, at London, the Government of Queensland, Australia, has on display a fountain of quicksilver, which probably attracts the greatest attention of the exhibition. One of its striking features is that a few ordinary household flatirons float in the bottom basin, as the density of the mercury supports iron as water does wood. The fountain consists of two basins, one above the other. These are of iron, enameled black, to give a greater effect to the falling quicksilver, the top some five feet in diameter, and the lower one three feet larger. The mercury runs into an upper bowl from a height, and thence by little channels around the edge into the lower basin. The supply is so arranged that there is almost continual flow. The arrangement can scarcely be called a fountain in the ordinary acceptance of the word, for the difficulties of dealing with such a heavy body as mercury are too great to allow of a jet.

PERSONAL MENTION.

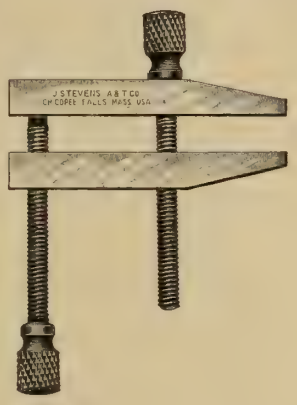
Mr. W. H. Cottingham, general-manager of the Sherwin-Williams Paint Co., Cleveland, sails to-day on the steamer St. Louis from Liverpool en route to Cleveland.

TIN AND TINPLATES.

THE question of the future supply and price of tin has come to the front with considerable force during the past few weeks, says Metal Worker. The recent extraordinary rise in the price of the metal to a point 120 per cent. above the price a year ago is attributed to speculation in London, based upon short supplies and an increased demand, and in the judgment of authorities in the trade there is more chance of higher than of lower prices ahead. This matter is one of close concern to the tinplate trade, where the possibility that the supply of tin may, in the near future, fail to meet the increasing demand, is a more serious one than the dearness of the metal, a factor which may be readily eliminated by a corresponding advance in the price of tinplates. It is shown that the supply of tin from primary producing points fell off in 1898 as compared with several years preceding, and the output of the current year does not seem, so far, to show an increase at all adequate to the great expansion in the consumption of tin in this country. The visible supply, in fact, was several thousand of tons less on July 1 last than it was a year ago, while deliveries into consumptive channels are materially larger than they were last year. In other words, while the consumption of tin has been steadily increasing, the supply has not only not increased but has actually diminished. This is the condition that has brought about the recent extraordinary upward movement in the price of the metal.

As illustrating the increased consumption of tin in the manufacture of tinplate, the following table is of interest :

	Tinplate exports from United Kingdom.	Tinplate production in United States.	Total.
1891	448,379	1,000	449,379
1892	395,449	18,400	413,849
1893	379,233	55,000	434,233
1894	353,928	74,000	427,928
1895	365,982	112,500	478,482
1896	266,965	155,800	422,763
1897	271,909	256,598	528,507
1898	251,760	326,915	578,875



This table, of course, does not include the production of other countries, which is small, however. There are no data relative to the production of Wales, so that the exports must be used. Consequently this takes out of consideration the English home consumption, which is of some importance. It suffices to indicate, however, one direction in which the consumption of tin has increased materially in the past two or three years. It also brings out a fact, often forgotten, that the transfer of the larger part of the tinplate business from Wales to this country has been coincident with increased requirements.

FOR YOUNG CANADIANS.

Don't wait until the iron's hot,
But make it hot by muscle.
Don't wait for the wealth your father's got,
Take off your coat and hustle.

What a year 1900 is to be! What a time for the young Canadian hustler—the rapid stenographer, the expert bookkeeper and the nimble telegrapher! They will all be wanted just as surely as that bright year is coming around. A start now will put you with the successful ones, and we can start you aright. Will you send us your name and let us tell you how? It is no trouble to us, and will benefit you.

MARKETS AND MARKET NOTES.

QUEBEC MARKETS.

MONTREAL, August 18, 1899.

HARDWARE.

BUSINESS in wholesale hardware circles has been fairly active for the season of the year, and values all around maintain the buoyant tendency that has characterized them since the beginning of the year. Builders' hardware is notably strong, and a good movement is maintained in nuts, bolts and screws. Other lines have shown less activity.

BARBED WIRE — Trade is quiet and prices unchanged, at $3 f.o.b. factory, and $3.10 to $3.15 in a jobbing way.

SMOOTH STEEL WIRE — There is little to report in this line, except a fair movement in bay-baling wire. Prices are unchanged at $2.85 f.o.b. factory.

GALVANIZED WIRE—There is a moderate movement in this line of material. We quote the base $3 for No. 9.

FINE STEEL WIRE—Quiet and steady at 20 per cent. off list.

BRASS AND COPPER WIRE — Remain the same, at 50 and 2½ per cent. on brass, and 45 and 10 per cent. on copper wire.

FENCE STAPLES—Unchanged: $3.05 for bright and $3.65 for galvanized per keg of 100 lb.

FINE STAPLES—Quiet and steady. Discounts are: Cooper, 55; poultry netting, 45, and electrician, broom, bed, etc., 40 per cent. off.

WIRE NAILS — Prices are steady at the rise, $2.80 per keg for standard nails, with the miscellaneous list 75 per cent. discount.

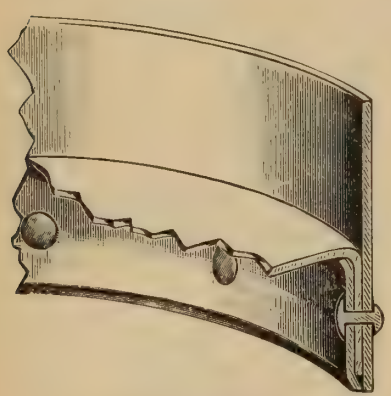
COPPER WIRE NAILS—Remain at 50 per cent. off list.

CUT NAILS—Continue quiet at $2.25 per keg f.o.b. the usual delivery points.

FLOUR BARREL AND COOPERS' NAILS—Without feature. Flour barrel 30 and coopers' nails 35 per cent. off list.

BOAT NAILS — Moderate inquiry and steady at 33⅓ per cent. discount on black and galvanized.

GALVANIZED ROOFING NAILS — Steady, at 8c. per lb. and 15 per cent. off list.



PRESSED SPIKES — Quiet, with discounts the same, at 30 per cent.

HORSE NAILS — Trade quiet and discounts unchanged, at 50 per cent. on standard and 50 and 20 on Acadia.

HORSESHOES — A moderate demand is to be noted. We quote as follows: Iron shoes, light and medium pattern, No. 2 and larger $3.50; No. 1 and smaller, $3.75; snow shoes, No. 2 and larger, $3.75; No. 1 and smaller, $4; X L steel shoes, new light pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; featherweight, all sizes, Nos. 0 to 4, $5.15; and toe weight steel shoes, all forward, all sizes $6.25 f.o.b. Montreal, St. John, N.B., and Halifax, N.S. Delivered f.o.b. in Toronto, Hamilton, London and Guelph 10c. per 100 lb. extra.

SCREWS — Inquiry for screws is still fair. Discounts are as follows: Flat head, bright, 80 and 5 per cent; round head do., 75 and 5; flat head, brass, 75 and 5; round head do., 67½ and 5.

BOLTS—In fair request and steady. Discounts are as follows: Carriage bolts, 5-16 and smaller, 55 per cent.; ⅜ and up, 50 per cent.; full square bolts, 65 per

Section of Bottom.

cent.; machine bolts, 55 per cent.; coach screw bolts, 67½ per cent., and sleighshoe bolts, 72½ per cent.

NUTS AND WASHERS — The same can be said of these. We quote: Square, 3¾c. and hexagon 4¼c. per lb.; discount off list. Washers in 50-lb. boxes are 50 per cent. discount.

RIVETS—Trade fairly brisk. Discounts are: Black and tinned, 45 per cent.; ditto burrs, 40 per cent.; copper rivets and burrs, 35 per cent.

CORDAGE — There is not much business doing. We quote as follows: Manila, 7-16 and up, 12c.; ⅜, 12½c., and ¼ and 5-16, 13c. Sisal, 10¾c. for 7-16 and up; 11¼c. for ⅜, and 11¾c. for ¼ and 5-16. Binder twine: Pure manila, 10½c.; 550 feet, 10c.; sisal, 500 feet, 9½c.

WRINGERS — Business quiet and prices the same at $48 to $60, as to brand, with 45 per cent. discount.

BUILDING PAPER—Business is moderately good. We quote: Plain building, 28c.; tarred lining, 35c.; tarred roofing, $1.40, and carpet felt, $2.25.

CUTLERY—Orders for forward delivery are coming in well.

SPORTING GOODS—Without change, with inquiry fair for firearms and ammunition.

CEMENT—Mail advices from London have been somewhat easier in tone, and indicate that manufacturers would shade prices on large contracts, but advices from other foreign makers continue as firm as ever. Locally, a fairly active jobbing trade has been done, there being a good demand for small lots, and prices show no change. We quote: Belgian, $1.90 to $2.10; English, $2.30 to $2.40, and German, $2.45 to $2.65, per cask ex wharf.

FIREBRICKS—There is a steady demand for firebricks and the market is active, with prices unchanged at $17 to $23 per 1,000, as to brand, ex wharf. Receipts for the past week were 80,000, as against 30,500 for the previous one, making a total to date of 1,279,400.

METALS.

The heavy iron and metal market continues strong, but there are no important changes to report this week in spot values.

PIG IRON—The pig iron market remains firm, No. 1 Summerlee having sold at $24 for round lots, and we now quote $24 to $25, as to quantity.

BAR IRON—The firm feeling is maintained, and nothing can be bought here under $2 f.o.b.

BLACK SHEETS — These are held firm at the rise noted last week. We quote: 8 and 16, $3; 18 and 20, $2.40; 22 and 24, $2.60; 26, $2.65, and 28, $2.70.

HOOP IRON—Firm and unchanged at $2.60 to $2.70.

STEEL — Firm, and stocks are extremely light. We quote as follows : Sleighshoe and tire, $2.50; spring, $2.75 ; machinery, $3, and toe calk, $3.

GALVANIZED IRON—An active inquiry is noted, but stocks are light and business is restricted. We quote as follows: Queen's Head, $4.55 to $4.80 ; Comet brand, $4.30 to $4.55, according to the size of the order.

INGOT COPPER —This market is steady, and local quotations are unchanged at 19½ to 20c.

INGOT TIN—There is an active demand, and values are firmly held as last noted at 36c.

PIG LEAD—Firm outside and unchanged here at $4.25 per 100 lb.

LEAD PIPE—Dull but steady. We quote as follows : Ordinary, 7c., and composition waste, 7½., with 20 per cent. discount.

IRON PIPE — There is a good business doing. We quote : Black pipe, ⅛ and ¼-inch, $3.12 ; ½-inch, $3.09; ¾-inch, $3.72 ; 1-inch, $5.14 ; 1¼-inch, $6.82 ; 1½-inch, $8.66 and 2-inch, $11.02. Galvanized pipe, ⅛ and ¼-inch, $5.64 ; ½-inch, $6.64 ; ¾-inch, $7.41 ; 1-inch, $10.12 ; 1¼-inch, $14.03 ; 1½-inch, $17.16, and 2-inch, $23.

TINPLATES—These are firmly held at last week's rise. We quote: Coke, I.C., $4.40; charcoal, I. C., Allaway or Comet brands, $4.80; do. I. X., $5.05; Lincoln, $5; P. D. Crown, $5.30; do. I. X., $5.80 ; Bradley's, $6.25.

CANADA PLATES — Continue firm at the rise, and prices point still higher. We quote as follows : 52's, $2.60 ; 60's, $2.70 ; 75's, $2.80 ; full polished, $3.25 ; galvanized Canada plates, $4.55 for 52's.

TERNE PLATE—No further change is noted in ternes, which we quote at $7.50.

COIL CHAIN--Quiet and steady. We quote: No. 6, 10¾c.; No. 5, 9¼c.; No. 4, 8¼c., and No. 3, 7¼c. per lb.; ¼-inch, $6; 5-16, $4.75; ⅜, $4.25; 7-16, $4.10; ½, $4; 9-16, $3.95; ⅝, $3.85 ; ¾, $3.65, and ⅞, $3.55 per 100 lb.

SHEET ZINC — Remains stiff at 7½ to 7¾c.

ANTIMONY—Unchanged, at 10 to 11c.

SPELTER—Nothing special to report, prices being steady at $7.

GLASS.

There is no change in window glass. We quote as follows : First break, $1.90 ; second, $2 for 50 feet ; first break, 100 feet, $3.60 ; second, $3.80 ; third, $4.25 ; fourth, $4.50 ; fifth, $5 ; sixth, $5.50, and seventh, $6.

PAINTS AND OILS.

Turpentine has continued the interesting feature of this market, a further advance of 4c. being established this week in sympathy with the advance at primary markets, which continue very excited. Business is over in paris green, and leads and paints are steady as last quoted. Linseed oil is 1c. per gallon dearer.

WHITE LEAD—Best brands, Government standard, $6.00 ; No. 1, $5.62½ ; No. 2, $5.25 ; No. 3, $4.87½.

DRY WHITE LEAD—$4.75 in casks; kegs, $5.

RED LEAD—Firm ; casks, $4.75 ; in kegs, $4.50.

WHITE ZINC PAINT—Pure, 8c.; No. 1, 6½c.; in oil, pure, 9c.; No. 1, 7½c.

PUTTY –We quote : Bulk, $1.65 ; bladders, in bbls., $1.80; bladders, in cases, $1.95; in tins, $2.05 to $2.30.

LINSEED OIL — Raw, 58c. ; boiled, 61c., five to nine-barrels, 1c. less, ten and twenty-barrel lots open, net cash, plus 2c. for 4 months. Delivered anywhere in Ontario between Montreal and Oshawa at 1c. per gallon advance and freight allowed.

TURPENTINE—Single barrels, 76c.; two to four barrels, 75c.; two to four-barrel lots, 1c. less, five barrels and over, open terms, the same terms as linseed oil.

MIXED PAINTS—Firm ; $1 to $1.20 per gallon.

CASTOR OIL—Firm ; 7½ to 8c.

SEAL OIL—35½ to 37½c.

COD OIL—35 to 37½c.

NAVAL STORES—Fair demand for all lines, and prices show no change: Resins, $2.75 to $4.50, as to brand; coal tar, $3 to $3.50 ; cotton waste, 4½ to 5½c. for colored, and 6 to 7½c. for white ; oakum, 5½ to 6½c., and cotton oakum, 9 to 11c.

PETROLEUM.

In moderate request. We quote as follows: Crown Acme, the new Sarnia oil, 15½c. ; Perfection and Silver Star, Canadian refined, 14½c.; American prime white, 17c.; water white, 18c., and Pratt's astral, 19½c., in small quantities.

HIDES.

Steady and unchanged. We quote : Lambskins, 40c. Beef hides, 9, 8 and 7c., while calfskins are 11 and 9c.

COAL.

As last reported. We quote : Stove, $5.75; chestnut, $5.75; egg, $5.50; Scotch grate, $6; Scotch steam, $4 to $4.50; Tower ports steam, $3.50 to $3.75.

Two carloads of machinery, consisting of a boiler, engine, shafting, lathes, etc., and a car of firebricks have arrived for The Abbott-Mitchell Iron and Steel Co. The machinery has been unloaded and will be erected in the east end of the spike factory, where it will be used to make bolts and other iron work needed in the construction of the building.

ESSEX HANDLE and WOOD TURNING WORKS.

Late of Essex, now LEAMINGTON ONT.

Makers of Axe, Fork, Rake, Hoe, Sledge, Broom, Hammer, and all kinds of Handles. Neck Yokes, Singletrees, and Doubletrees, Bench Saws, Exercise Clubs, Baseball Bats, etc., etc. Do you sell any Shaved Pattern and Octagon Axe Handles? The largest and best trade in Canada does, because they give best satisfaction. **All stock air-dried,** not kiln-dried. If you are going to be in it, place your order with

GARDNER BROS. & CO.

This light we claim produces a steady incandescent light, double the value of ordinary, and consumes less oil (Canadian prefered). Requires snuffing only once in two months—does not smoke—chimneys need no wiping. Positively without smell. Why? Because our automatic battery produces an electric current from the chemicals of the oil which carbonizes the wick, thus, the above results. Less explosive. Will fit any lamp. Sells at sight. Write for prices.

Shipment Prompt. Prices the Lowest.

ONTARIO MARKETS.

TORONTO, August 18, 1899.

HARDWARE.

THE feature of the market this week is the change in prices made by Canadian manufacturers of cast hardware, who have made advances ranging from 10 to 50c. on the various lines made by them. The manufacturers claim that not only the scarcity of raw materials but also the higher prices they are now compelled to pay, have compelled them to at last follow the American manufacturers in making the advances noted. The movement of general hardware continues active for the season. The demand seems to apply to all lines. Sales to Ontario points are rather of the smaller order, but many good shipments are being called for from Manitoba, the Northwest and British Columbia.

BARBED WIRE—Business continues quiet, with prices unchanged at $3.25 f.o.b. Toronto.

SMOOTH STEEL WIRE—The demand is somewhat better. An advance of 15c. is noted in the base price of oiled and annealed wire, which is now quoted at $3 per 100 lb. Clothesline wire, 19 gauge, is also 30c. dearer, the present price being $3.30. Haybaling wire continues in good demand.

GALVANIZED WIRE — A moderate but steady demand is noted. We quote as follows: Nos. 6, 7, 8 gauge $3.40; No. 9, $2.90; No. 10, $3.50; No. 11, $3.55; No. 12, $3.05; No. 13, $3.15; No. 14, $3.90; No. 15, $4.50; No. 16, $4.65.

WIRE NAILS—Prices continue firm, but are as yet unchanged at $2.75 as a base price.

CUT NAILS — Continue quiet, at $2.25 f.o.b. Toronto, Hamilton and London.

HORSE NAILS — Very little doing. We quote: Standard, oval head, 50 per cent.; Acadia, countersunk head, 50 and 20 per cent.

HORSESHOES—A fair business in noted. Prices are firm, but unchanged. We quote as follows: f. o. b. Toronto, Hamilton, London and Guelph: No. 2 and larger, light, medium and heavy iron shoes, $3.60; snow shoes, $3.85; light steel shoes, $4.00; featherweight shoes, all sizes, $5.25. No. 1 and smaller, light, medium and heavy iron shoes, $3.85 per keg; iron snow shoes, $4.20; light steel shoes, $4.15; featherweight steel shoes, all sizes, $5.25.

SCREWS—The demand continues brisk. Prices are steady. No change. We quote as follows: Flat head bright, 80 and 5 per cent. off the list; round head bright, 75 and 5 per cent.; flat head brass, 75 and 5 per cent.; round head brass, 67½ and 5 per cent.; flat head bronze, 67½ and 5 per cent.; round head bronze, 62½ and 5 per cent.

BOLTS — The activity in the demand is well maintained. We quote as follows: Norway bolts, full square, 65 per cent.; common carriage bolts, 5-16 and under, 55 per cent.; ditto, ⅜ and larger, 50 per cent.; ditto, full square, 65 per cent.; machine bolts, all sizes, 55 per cent.; coach screws, 67½ per cent.; sleighshoe bolts, 72½ per cent.; blank bolts, 55 per cent.; bolt ends, 62½ per cent.; nuts, square, 3¾c.; nuts, hexagon, 4¼c.; tapping nuts, 60 per cent.; tire bolts, 60 and 10 per cent.; stove bolts, 60 and 10 per cent.

RIVETS AND BURRS—An improvement in the demand is noted. The discount off list on steel carriage section, wagon box. and black M rivets, etc., has been reduced from 60 to 55 per cent. The discount off list on Norway iron carriage, section, wagon box rivets, etc., has been increased from 55 to 60 per cent.

ROPE—There is still a little doing. The price of sisal and manila has advanced 1c. throughout. New Zealand is 1½c. dearer, and lath yarn has been advanced 1¼c. We quote as follows: Sisal, 7-16 in. and larger, 11½c. per lb.; ⅜ in., 12c.; ¼ and 5-16 in., 12½c. Manila, 7-16 in. and larger, 13c. per lb.; ⅜ in., 13½c.; ¼ and 5-16 in., 14c.; New Zealand, 11c. per lb.; Deep sea line, 13½c. for water laid, and 14½c. for machine-made; hemp, 7 to 9c.; lath yarn, 10c. Clotheslines, 48 feet, 90c.; 60 feet, $1.20; 72 feet, $1.50; 100 feet, $2.

CHURNS — Trade has been somewhat better this week. Prices are steady. We quote: Metal frame—No. 0, $3; No. 1, $3.20; No. 2, $3.40; No. 3, $3.75; No. 4, $4.50; No. 5, $5.90. The price of wooden frames is 15c. per churn less than the above. Terms, 3 per cent. off 30 days f.o.b. Toronto.

WRINGERS — The demand keeps quiet, We quote as follows: "Leader," $60 per doz.; "Royal Canadian," $58; "Royal American," $48. Prices are all f. o. b. Toronto, Hamilton, Brockville, and Montreal. Discount, 45 per cent. Terms, four months, or 3 per cent. 30 days.

BUILDING PAPER—A good demand is noted. Prices are firm. We quote: Plain building, 28c. per roll; tarred lining, 35c., according to quality; tarred roofing felt, $1.40 per 100 lb.; carpet felt, $2.25 per 100 lb.

CUTLERY — A stiff feeling is reported. The demand keeps very active.

LANTERNS —The demand is brisk. Another advance of 50c. has been made in cold blast and Wright's No. 3 lanterns. We now quote: Plain cold blast, $8 per doz.; ordinary, with "O" burner, $4.50; "Dashboard," cold blast, $10; ditto, No. 0, $6.50; Wright's No. 3, $8. Japanning 50c. per doz. extra.

CEMENT — The demand continues brisk. As foreign Portlands are not offering in large quaatities, there is a heavy movement of the native article. We quote in barrel lots as follows: Canadian Portland, $2.65 to $2.90; English do., $3; German do., $3.10; Belgian do., $2.70; Canadian hydraulic cements, $1 to $1.10; calcined plaster, $1.90; asbestos cement, $2.50 per bbl.

WARE — There is a good movement of enameled ware, but tinware continues rather quiet.

METALS.

A strong tone is still manifesting. The demand for pig tin has quieted down somewhat, buyers looking for a reaction in prices. Holders, however, claim this is not in sight. Some lines of tinplates are 25c. per box dearer. Black sheets, 28 gauge, have also advanced 15c. The demand for all iron and lead metals continues unusually active.

PIG IRON—The situation is unchanged. Prices are firm and the demand heavy. We still quote : $21 f.o.b. Hamilton.

BAR IRON—An active demand continues with prices firm at $2 per 100 lb. base.

BLACK SHEETS—Trade continues good. There is an advance in 28 gauge, which is now quoted at $3.10.

GALVANIZED IRON—There is still an active demand. Stocks here are low. Quotations are unchanged at $25 for 28 gauge.

COPPER—There is a fairly good demand. Prices are well maintained. We quote : Ingot tin, 20 to 21c. per lb. and sheet, 23 to 23½c. per lb.

PIG TIN—The demand has eased off somewhat. Prices are fluctuating considerably in New York and London markets. No change is noted here, 37c. per lb. being the general quotation.

TINPLATES—A good trade is being done. M.L.S. plates are 25c. dearer. I.C., in the usual sizes, are quoted at $6.50 ; I.X. at $7.75.; I.X.X. at $9. Other brands are unchanged.

CANADA PLATES—The demand is unusually large. Import orders are now coming forward rapidly. We quote : All-dull, $2.75 ; half-polished, $2.85 ; all-bright, $3.20.

IRON PIPE —A big business is still being done. Prices are firm and unchanged. Quotations on black pipe are : ¼ to ⅜ inch, $3.35 ; ½ inch, $3.40; ¾ inch, $4 ; 1 inch, $5.50 ; 1¼ inch, $7.35; 1½ inch, $9.25 ; 2 inch, $12.50 ; 2½ to 6 inch, discount off the list 45 per cent. Galvanized pipe is quoted as follows : ½ inch, $6.50 ; ¾ inch, $8 ; 1 inch, $11; 1¼ inch, $15.25; 1½ inch, $19 ; 2 inch, $27.

PIG LEAD—Trade is fairly active. The market is advancing, but locally prices are yet unchanged at 4½ to 4¾c. per lb.

LEAD PIPE — The demand is improving. We quote : Ordinary pipe, 7c.; waste, 7½c. Discount, 20 per cent.

RANGE BOILERS—A brisk demand continues. We quote: Galvanized, 30 gals., $9; 35 gal., $10; 40 gal., $11. Copper, 30 gal., $22 ; 35 gal., $26 ; 40 gal., $30; discount off copper boilers, 10 per cent.

SHEET ZINC — The improvement noted last week is well maintained. Prices are unchanged at 8¼ for cask lots and 8½c. for smaller quantities.

SPELTER—The demand is rather less than it has been, but is still good. Prices are unchanged at 7½ to 7¾c. per lb.

SOLDER—The same causes that have led buyers to reduce their purchases of pig tin have lessened the sale of solder. Prices are unaltered. We quote : 21 to 22c. for half-and-half ; 20 to 21c. for refined, and 18 to 19c. for wiping.

ANTIMONY—A more active demand is noted, with prices steady at 11 to 11½c. for Cookson's.

SOIL PIPE—A big trade is being done. The discount is unaltered at 50 and 10 per cent.

PAINTS AND OILS.

A fair demand is noted. The market is still stiffening. Turpentine is 4c. and linseed oil 1c. per gallon dearer. White zinc paint is 1 to 1½c. dearer, pure being quoted at 8 to 9c., No. 1 at 6 to 7½c., and No. 2 at 5 to 6½c. Some dealers quote pure liquid paints 10c. dearer, but others are still selling at $1. White lead is firm, but unchanged. We quote :

WHITE LEAD—Ex Toronto, pure white lead, $6.12½; No. 1, $5.75; No. 2, $5.37½; No. 3, $5 ; No. 4, $4.62½ ; dry white lead in casks, $5.10.

RED LEAD—Genuine, in casks of 560 lb., $4.90 to $5 ; ditto, in kegs of 100 lb., $5.15 to $5.50; No. 1, in casks of 560 lb., $4.75 ; ditto, kegs of 100 lb., $5.

LITHARGE AND ORANGE MINERAL—Litharge, 6 to 6½c. ; orange mineral, 7½ to 8½c.

WHITE ZINC—Genuine, French V.M., in casks, $7 to $7.25 ; Lehigh, in casks, $6.

PARIS WHITE—90c.

WHITING — 55c. per 100 lb.; Gilders' whiting, 85c.

GUM SHELLAC—In cases, 20c. ; in less than cases, 24c.

PLASTER PARIS — Ordinary, $1.75 per barrel ; New Brunswick, $2 to $2.20 per barrel.

PUMICE STONE—Powdered, $2.50 per cwt. in barrels, and 4 to 5c. per lb. in less quantity ; lump, 10c. in small lots, and 8c. in barrels.

LIQUID PAINTS—Pure, $1 to $1.10 per gallon ; No 1 quality, 90c. per gallon.

SEAL OIL—59 to 60c. per gallon, and yellow seal at 49 to 50c.

CASTOR OIL—East India, in cases, 9c. per lb. and 10c. for single tins.

LINSEED OIL — Outside western points (freight allowed) : Raw, 1 to 4 barrels, 59c.; boiled, 1 to 4 barrels, 62c. Prices in Toronto, Hamilton, London, are 1c. per gallon less.

TURPENTINE — Outside western points, freight allowed, 1 to 4 barrels, 77c.; in less quantities than barrels, 5c. per gallon extra will be added and packages charged for.

A Third of a Century

is a long period for the supremacy of a brand of horse nails to have been maintained. The "C" brand, made by us, has never been beaten in the contest for first place by our competitors. The only Gold Medal ever awarded in Canada for horse nails, was granted to us in competition with the world. Such a creditable record has not been obtained without good cause.

Temporary success is comparatively easy to obtain ; but for a manufacturer of horse nails to maintain the popularity of his brand year after year, as we have done since 1865, and over such a widely extended area as is comprised within the limits of the Dominion, from the Atlantic to the Pacific, it must have a more permanent basis than mere passing fancy. The "C" brand nails, when used, tell their own story : they represent the perfection of horse nail production. The basis of a good nail is good material. We use the best Swedish charcoal steel nail rods exclusively, which is the best known material for the purpose.

Our nails are all hot-forged from the rods, as in the old-fashioned hand hammered process, but with greater uniformity. The pointing and finishing processes are done by machinery used exclusively by our company. All our nails are carefully hand-picked, and we claim that not a single imperfect nail is to be found in a box bearing our name and brand. They are the most economical to buy and use, because they are the best, and every box warranted. They are the same price as other brands—and should be obtained from all dealers on our terms plus freight.

In ordering, specify for the "C" brand, made by

Canada Horse Nail Company,

MONTREAL.

Prices in Toronto, Hamilton, and London are 1c. less than the above. Terms, net 30 days.

GLASS.

No import arrivals are yet noted. Stock prices are firm here. The European markets are advancing. We quote: Star, first break in 50-foot boxes, $2.15, and in 100-foot boxes, $4; double diamond under 25 united inches, $6, Toronto, Hamilton and London; terms 4 months or 3 per cent. 30 days.

OLD MATERIAL.

No change is noted. Prices are firm throughout. We quote as follows: Agricultural scrap, 55c. per cwt.; machinery cast, 60c. per cwt.; stove cast scrap, 45c.; No. 1 wrought scrap, 55c. per 100 lb.; new light scrap copper, 12½c. per lb.; bottoms, 11c.; heavy copper, 15c.; light scrap brass, 7½c.; heavy yellow scrap brass, 10c.; heavy red scrap brass, 11c.; scrap lead, 2½c.; zinc, 3c; scrap rubber, 4c.; good country mixed rags, 65 to 75c.; clean dry bones, 45 to 50c. per 100 lb.

HIDES, SKINS AND WOOL

HIDES -- There is a good demand at firm prices. We quote cowhides: No. 1, 8½c.; No. 2, 7½c.; No. 3, 6¼c. Steer hides are worth ½c. more. Cured hides are worth 9c.

SKINS—Prices are firm and unchanged, and a good demand absorbs all supplies. We quote: No. 1 veal, 8-lb. and up, 9c. per lb.; No. 2, 7c.; dekins, from 30 to 35c.; culls, 15 to 20c. Sheepskins are worth 90c. to $1, and lambskins, 35 to 40c.

WOOL—The bulk of this season's clip seems to be in the hands of dealers. These find little inquiry. No sales are reported yet. We quote fleece at 14 to 14¼c., and unwashed at 8 to 9c.

PETROLEUM.

Business is brisk. Prices are steady. We quote in barrels, Toronto, as follows: Canadian, 14c.; Sarnia prime white, 14c.; Sarnia water white, 15c.; photogene, 15½c.; American water white, 16½c.; Pratt's astral, 18c.

COAL.

Prices are well maintained. We quote as follows: Anthracite for August delivery at Buffalo and bridges: Egg, stove and nut, $4.50 per gross ton, or $4.01 per net ton; grate, $4.25 per gross ton or $3.79 per net ton.

MARKET NOTES.

Lanterns are 50c. dearer.

Oiled and annealed smooth steel wire is 15c. dearer. It is now quoted at $3 per 100 lb.

White zinc paint is 1 to 1½c. per lb. dearer.

Turpentine is advanced 4c., and linseed oil 1c. per gal.

Japanned and N.P. door knobs are 10c. per dozen dearer.

Sectional sash weights are $1.50 per 100 lb. dearer. Solids have advanced 25c. per 100 lb.

Sisal and manila ropes are 1c. dearer. New Zealand is advanced 1½c., and lath yarn 1¼c.

Since the wire nail markets went to press, word has been received of an advance of 15c. The base price is now $2.90.

DESIGNS AND PRICES.

Every merchant should feel ambitious to lead in his locality in all matters pertaining to designs and finish of goods as well as value says Stoves and Hardware Reporter. There is no more expense attatched to having all up-to-date goods before competitors can show them than it is to buy that which will not meet with as great popularity. With every facility for ascertaining just what is the most desirable and attractive, there is no excuse for the merchant having lines in stock which sell slowly or not at all. The importance of having staple goods—which have an assured position in the hearts of the people—in the store cannot be gainsaid. Nothing disgusts a customer with the store more than to call for a certain article, which is universally known, and then to be told that it is not in stock. As everyone knows, it is much less difficult to sell goods which have attained some prestige than it is to push others, which are less known and therefore less attractive. The best way for the merchant to build up a reputation is to have the goods when they are called for, and sell them at reasonable prices. If the efforts which some merchants put forth in trying to lower prices were more properly expended in devising some original methods for drawing customers to the store and securing trustworthy merchandise for them after they were there, it would be much better for all concerned in the matter. The merchant must be always taking the future into consideration when he is selling as well as buying goods, for it should be his earnest desire to make all patronage permanent.

"NEWS" IN ADVERTISING.

The trouble with most advertisers and advertising writers, says Advertising Experience, is that they have not the newspaper sense of what is "news." Items of knowledge that would be of the highest interest to the persons they are talking to are so familiar to the advertiser himself as to seem commonplace and hardly worth speaking of; yet, it is probable that the average man knows nothing regarding it, and would be thankful for the information. One advertiser of wide experience, who has been very successful in the preparation of "newsy" advertisements, makes the practice of finding out just what his friends and acquaintances know concerning his goods and their method of manufacture. Wherever he finds the slightest degree of ignorance, he promptly starts a "campaign of education."

The British Columbia Assay and Chemical Co. has been incorporated, with headquarters at Vancouver.

F. C. Marquis, glue manufacturer, Quebec, has sold out his business to parties representing the United States glue trust. The purchasers were Paul Galibert, Montreal; Alphonse Wheil, New York, and H. Lazaare, New York.

LONG CREDITS AND OVERBUYING.

THIS is the time when many ironmongers are deploring the names of long-winded customers upon their books, and many hardwaremen are concocting innocent, courteous billet-doux so as to entice their money from these customers, says The Hardwareman, London, Eng. It is at a time such as this when the hardwareman wonders if it pays to run a business on credit terms. It is so irritating to be continually pressed for money when there is so much money on the books. Then is the cash trader envied, and sundry resolutions come to, only to be broken when the next credit customer enters the shop.

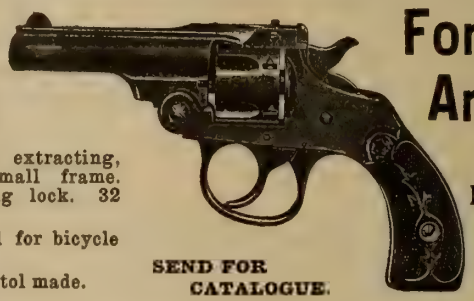
It is well to remember, however, that as much harm is done and as much danger incurred by buying too heavily as by giving too much credit. If an ironmonger buys a dozen of any particular article when nine will do—and it is probable that this is one of the besetting sins of our trade—and if he buys £8,000 worth a year, it means that he has £2,000 worth too much stock. This means heavier depreciation, added expenses for warehousing, and not a penny to his turnover. When one is in difficulties, it is well to look facts well in the face and realize how we stand. We give credit because we want that sort of business, but it is necessary always to remember that we cannot have our money both in our books and in our stock.

A further disadvantage accruing from overstocking is, that there is no space to set out our goods attractively. It is probable that English ironmongers' windows are the least interesting in most thoroughfares. Generally speaking, a great mass of hardware is thrown into the window helter skelter, with the result that many a customer is lost.

They have learned this business in America, where the windows of hardwaremen are quite as attractive as drapers. When our commissioner was in Chicago he found himself gazing into a hardware window, and was quite fascinated. On looking up he saw in white enamel letters on the window glass these words :

COME IN—WE CAN'T TALK TO YOU THROUGH THE WINDOW.

Something of this might not be amiss in the Old Country.



In a recent interview, J. A. Bain, of the Bain Wagon Co., Limited, Woodstock, Ont., stated that his firm will probably turn out 6,000 wagons this year. The demand comes from all the Canadian Provinces, but the Manitoba and British Columbia business shows greatest increase.

AMERICAN COW TIES
WILL OUTLAST ALL OTHERS.

This is because the form of the link, the exact size and shape of which are shown above, is such that the wear is distributed evenly over its entire end. The bearing surface is thus very large, and the chain will wear for years without becoming worn appreciably.
With other styles of chain the bearing surface is only a very small portion of the extreme end of the link. Grooves are soon formed, and in a comparatively short time the links are worn—or, properly speaking, cut—through.
These facts are well shown on a cow tie recently brought us for repairs. It was an ordinary No. 00 three chain tie. One chain was wire, the other two American. One of the wire links was worn entirely through. The others were nearly as bad—a strong pull would have broken almost any of them. With the American chains on the other hand, the wear was very slight, and hardly noticable—three times this amount would not have weakened the chains seriously.
In addition, because of its flat link and smooth surface, American chain is much easier for the neck of the animal than the twisted or wire chain. The American link cannot injure the animal's neck—other styles of link are very liable to.
American Cow Ties are made in all the standard patterns and sizes. They are sold by all jobbers.

ONEIDA COMMUNITY, Limited, NIAGARA FALLS, ONT.

MANITOBA MARKETS

WINNIPEG, Aug. 14, 1899.

THIS market shows one or two slight advances during the week, and an increased demand for building hardware. Otherwise, building is quieter than it has been through the season, but still better than at the same period last year. A number of changes are anticipated in the near future. We quote :

Barbed wire, 100 lb	$3 75

LAMPS.

The season is now at hand when the retailer must think of replenishing his stock of lamps, says Stoves and Hardware Reporter. They should be varied in assortment according to the pocketbook of the clientele to which the dealer caters. Everyone knows by this time what things of beauty lamps can be. However, it is also equally well known that the latter variety are generally quite expensive and are only in demand by the better class of trade. But there are styles in lamps which are quite pleasing and yet are not so very high in price. These are the kind that are most popular and which the retailer should strive most energetically to purchase. It has been said that there is no other line of goods so difficult to keep an unbroken stock of as lamps, nor is it always possible to readily gauge the demand for them. Decorated parlor lamps are always in request. Those with china bowls and shades and embossed decorations are quite cheap, yet equally attractive. These may be obtained with lavender, green and canary decorations, and when fitted with brass sun burners make lamps which would suit a fastidious taste which is not accompanied by a very fat pocketbook. Others equally desirable and yet cheap, are decorated with pastoral scenes on globes as well as shades. These have yellow, rose color and blue decorations on the bowl of the lamp, and are fitted with brass gallery burners. A somewhat more expensive style, which is even more pleasing, has a fancy, rounded and somewhat fluted bowl, tinted in delicate shades, with a conventional design in rose color, green and canary on the bowls and shades. Below these are sprays of flowers, forget-me-not spray, daisy spray and wild flower spray. The colors in these are pleasing and harmonious.

OUR TRADE WITH NEW ZEALAND.

Mr. J. S. Larke, Canadian commercial agent for Australasia, in his report to the Department of Trade and Commerce, on the trade between Canada and New Zealand, gives the exports for this colony to the Dominion for the year 1898 at $18,550, an increase of $13,400 on the previous year. The imports from Canada were $357,556, an increase for the year of $52,905.

Besides the increases, Mr. Larke says that the returns show "the introduction of small lots in many lines, showing activity and an interest in trade with Canada. Much of this was the result of the calling of the Canadian Australian steamers at Wellington. With the withdrawal of the line from that port this influence will cease, but if the Canadian manufacturers desire to continue the trade with New Zealand, what has been gained will be held and added to."

BUSINESS CHANGES.

DIFFICULTIES, ASSIGNMENTS, COMPROMISES.

DANIELS & TILSON, general merchants, Burk's Falls, Ont., are offering to compromise.

H. Lafkovitz, general merchant, St. Tite, Que., has assigned.

Assignment has been demanded of Abraham Loyer, builder, Montreal.

Robert Conn, general merchant, Thornbury, Ont., has assigned to James Glanville.

Chestnut & Hopwell, carriagemakers, Woodstock, Ont., are offering 30c. on the dollar.

F. Gagnon & Fils, general merchants, etc., Baie St. Paul, Que.. are offering 25c. on the dollar.

Mrs. J. A. Blondin, general merchant, St. Maurice, Que., has assigned to Lamarche & Benoit.

The creditors of M. W. Ridley & Co., general merchants, Wales, Ont., meet in Toronto on August 18.

A meeting of the creditors of J. & P. Vadeau, general merchants, etc., Grand Cascapedia, Que., has been called for August 21.

PARTNERSHIPS FORMED AND DISSOLVED.

Jos. Dube & Cie., builders, Montreal, have registered partnership.

Wm. Williamson, dealer in hardware, etc., Medicine Hat, N.W.T., has admitted — McIntyre under the style of Williamson & McIntyre.

John Wyman and Isaac Hipson have registered partnership as general merchants under the style of Wyman & Hipson, East Pubnico, N.S.

Roderick R. McKenzie and Thomas H. Hartigan have registered partnership as general merchants under the style of Roderick R. McKenzie, North Sydney, N.S.

SALES MADE AND PENDING.

T. W. Dingwell, harnessmaker, Martintown, Ont., has sold out.

Wm. H. Reed, mfr. pumps, Milton, Ont., is advertising his business for sale.

Clinton J. Campbell, general merchant, etc., Duncan City, B.C., is selling out.

U. F. Drouin, wholesale and retail hardware dealer, Quebec, has sold his stock to J. E. Martineau at 51½c on the dollar.

May Bros. hardware dealers, Montreal, have bought out the hardware business of J. H. Gardiner & Co., plumbers and hardware dealers, Montreal.

CHANGES.

A. T. Davidson, sr., blacksmith, Bullock's Corners, Ont., has retired from business.

John Hart, blacksmith, Brucefield, Ont., has sold out to D. Campbell.

Pierre Malette, carriagemaker, etc., St. Eugene, Ont., is retiring from business.

James McDonald, blacksmith, Teeswater, Ont., has been succeeded by Thos.deGreer.

James Weeks, harness dealer, Thorold, Ont., has sold out to Wood Bros.

Arden Cameron, blacksmith, Waterdown, Ont., has quit business and left that place.

S. F. Pierce, general merchant, Cypress River, Man., has sold out to A. Sharp & Co.

McKeown & Co., dealers in stoves and housefurnishings, Hamilton, have been succeeded by Herbert Jones.

S. W. Moore, general merchant, Alberton, Ont., has sold out to Chas. Robertson, who will take possession on October 1.

FIRES.

J. Robson & Sons, tanners, Oshawa, Ont., have been burned out.

John Hillock & Co.'s planing mill, Toronto, has been damaged by fire.

Peter Weese, general merchant, Rossmore, Ont., has suffered slight loss by fire.

The warehouse of Body & Noakes, linseed oil manufacturers, Winnipeg, has been burned.

The C. Beck Manufacturing Co., of Penetanguishene, Ont., Limited, manufacturers of lumber, etc., have suffered loss by fire.

The Wm. Gray & Sons Co., Limited, manufacturers of carriages and wagons, Chatham, Ont., have suffered slight loss by fire.

IRON PRICES IN GERMANY.

Every week, remarks an English trade paper, brings news of a further advance in prices, sometimes for one class of article, sometimes for another ; now it is the hoop-iron makers' syndicate, which sends around circulars to announce an advance in price of 7.50 marks per ton for hoops after the rise in raw materials.

Though prices have not yet attained the level of 1879-80, they have made progress during the last few years. In the year 1888, mouldings, Luxembourg moulding, bars, boiler sheets, fine sheets, Spiegel and Thomas were respectively 58.33 fr., 38.22 fr., 125.87 fr., 167.50 fr., 152.40 fr., 50.46 fr., 55.83 fr., and in 1898, 67.25 fr., 49.60 fr., 128.57 fr., 186.25 fr., 127.10 fr., 58 fr., 66.67 fr., 60 fr.

NO EXHIBIT AT TORONTO FAIR.

The Sherwin-Williams Co. will have no exhibit at the Toronto Exposition this year. They will, however, be pleased to have any of their friends visit them at their Toronto warehouse, 86 York street, where they will receive a hearty welcome, not only from the salesmen of the different territories, but from Mr. C. C. Ballantyne, manager of the Canadian division of the company's business, who intends taking advantage of the Exposition time to have the pleasure of getting better acquainted with their many friends in that part of the country.

CATALOGUES, BOOKLETS, ETC.

CAREY'S ASBESTOS COVERINGS.

The Philip Carey Manufacturing Co., manufacturers of felt, asbestos and asbestos-magnesia coverings, Lockland, Ohio, U.S.A., have issued a post card circular giving illustrations and descriptions of many of the lines they manufacture. This card should be of use and value to all using or handling coverings for pipes, boilers, domes, heaters, tanks, etc. It is worth writing for.

BRASS GOODS AND SUPPLIES.

T. McAvity & Sons, manufacturers of and dealers in brass and iron goods for steam-fitters, plumbers and engineers, St. John, N.B., have just issued their 1899 catalogue. The 94 pages of this work are full from first to last with illustrated descriptions, with prices, of the thousand and one articles made by this firm. Many new lines which were not included in former catalogues are shown in this one, and all lists have been revised and corrected to date. As this firm have a high reputation as manufacturers of valves, cocks, gauges, whistles, oil cups, lubricators, pumps, fittings, etc., every hardware dealer or plumber who has not received a copy of their catalogue should write for one. Ask for catalogue No. 27.

HE KNEW HOW TO ADVERTISE.

An original form of advertisement comes from Russia, where a shopkeeper posted up the following announcement:

"The reason why I have hitherto been able to sell my goods so much cheaper than anybody else is that I am a bachelor, and do not need to make a profit for the maintenance of my wife and children. It is now my duty to inform the public that this advantage will shortly be withdrawn from them, as I am about to be married. They will, therefore, do well to make their purchases at once at the old rate."

The result was that there was such a run on the shop that in the course of a few days this shopkeeper had made enough money to pay the expenses of his wedding on a very lavish scale.—Sketch.

CANADIAN ADVERTISING is best done by THE E. DESBARATS ADVERTISING AGENCY. MONTREAL.

FOR SALE.

FOR SALE — BRANCH STORE — PLUMBING. Hardware, Stove, Furnace and Tinning Business, Established five years. Sales doubled in last year. Only store of its kind within ten miles. Reasons for selling—Have all the business proprietors care to see to at their main store. $3,500 stock and fixtures. Rare chance for business man. Address, H. L. WHEELOCK Rock Island, Quebec. (t.f.)

HEATING AND PLUMBING

ACETYLENE.

FROM a recent issue of a contemporary, we subtract a few notes on "The Romantic History of the New Illuminant," meaning, of course, acetylene. "The Special Commissioner" of the paper in question, whose knowledge must by this time be as colossal as it is varied, is happy in his power to make interesting subjects which have hitherto been regarded by the general public as "dry," and the article in question is no exception. It is over 60 years since Edmund Davy showed the Dublin Royal Society of Chemists of his day that when a mixture of calcined tartar and charcoal was heated in an iron bottle there was often produced a black substance which, when dissolved in water, liberated the gas—then called bicarbonate of hydrogen, and now known as acetylene.

Its suitability as a brilliant illuminant was also pointed out, provided it could be produced cheaply. Matters, however, remained dormant for just 50 years, when Sir William Siemens introduced the furnace in which the electric arc was used to obtain intense heat; and amongst the uses to which this invention was turned was the production of aluminum, and in this process large quantities of carbide of calcium were made accidentally by the action of the great heat on the lime and carbon lining of the furnace. During the years 1886 and 1887, the lads employed at the works used to amuse themselves during their dinner hours by pouring water on the old crucible linings and lighting the gas which was thus liberated. No one, however, attached any commercial importance to the knowledge, and some years elapsed without any attempt to turn the gas to practical account. In 1892, an American, Mr. Willson, having failed in his experiments to make aluminum bronze, tried to reduce lime with carbon, and thereby obtained calcic carbide. The discovery got noised abroad, and those who should know agree that the honor of showing the road to the practical application of the wonderful gas belongs to Willson. In 1895 not 100 h.p. in all the world was being used in connection with the production of acetylene, whereas, in Europe alone, at the beginning of 1888, 35,000 h.p. was at work; and it is expected that very soon the resources will be such that the production of carbide will be at the rate of 20,000 tons per annum. The process, though highly technical, may be outlined simply enough. Lime and hard coke of the highest degree of purity, are employed—100 parts of lime to 68 parts of coke, and about ⅛ lb. of this mixture yields 1 lb. of carbide. It is curious that lime of sufficient purity for the purpose is difficult to obtain in large quantities, and is very costly. The lime and coke are put into a crucible, and, under the intense heat, the raw material is gradually transformed into an ingot of carbide. When the ingot is complete the crucible is withdrawn from the furnace and another substituted. Some part of the lime and carbon is incompletely reduced, and forms as a crust on the outside of the ingot; this is not so fertile in producing gas as the material within. By another process the lime and carbon are heated to liquefaction, and the crucible is tapped at short intervals. There is no unreduced material here, and the process is simpler and less costly; but, on the other hand, the output of carbide is less. From this carbide the acetylene gas is produced, and in the simplest way—by the application of water. Carbide can be kept quite safely so long as it is in a perfectly dry state, but the presence of moisture leads to the evolution of the gas. There is something almost uncanny in the production of the gas by the application of a jet of water; but science performs many miracles, and this is one. On the present scale, acetylene will not rival gas or electricity for general purposes; but it can be used wherever ordinary gas installations are not available, or can only be laid down at a cost for plant and working expenses out of proportion to the possible return. For lighting churches, factories, stations, country houses and other buildings, as well as villages and small communities where coal gas is not available or profitable, it is both handy, simple and effective; it can be used in floating buoys, bicycle and carriage lamps, table lamps, magic lanterns, photography, and in carriages on the Prussian railways it has been used successfully to enrich oil gas for lighting. In tram cars and 'busses, what would we, who know the wretched oil lamp, give for the acetylene substitute? The brilliancy and purity of its light forbid the assumption that it can be allowed to go unused, and those associated with its production confidently believe that it must have a future as brilliant as the flame itself.

J. H. Gardner & Bros., plumbers and hardware dealers, Montreal, have sold out their hardware business to May Bros., of that city.

PLUMBING AND HEATING NOTES.

A meeting of the creditors of F. Duclos, plumber, Montreal, has been held.

The stock of D. Dugas, plumber, Montreal, has been sold at 55c. on the dollar.

Tenders are asked by Robert Clohecy for a new Roman Catholic church in Brantford.

Two brick business blocks, one to cost $10,000, and the other $12,000, are to be erected in Nelson, B.C.

All plumbers should get a copy of T. McAvity & Son's August, 1899, catalogue, mentioned in another column.

J. A. Goth, Carleton Place, is inviting tenders for heating and ventilating in the new high school, Carleton Place.

N. S. Hoffar, architect, Vancouver, is asking for tenders for building a large brick block in that city for Thos. Dunn.

The Massey-Harris Co., Limited, Toronto, are having prepared plans for a clubhouse for their employes. It will be fitted with library, baths, lecture-rooms, etc., and will cost about $50,000.

TORONTO BUILDING PERMITS.

Permits have been issued in Toronto to Mrs. Jane Hine, for a two-storey brick dwelling on Broadview avenue, near Queen street east, to cost $1,300; to Mrs. F. M. Patreardon, for a two-storey and basement brick residence on the corner of King and Dowling avenue, to cost $3,500; to M. Langmuir Manufacturing Co., trunk manufacturers, for a two-storey solid brick factory near King street, on Niagara street, to cost $3,000; to Hugh Glenn, for the erection of a pair of semi-detached dwelling houses at 646 and 648 Gerard street east, to cost $1,700; to Seaman, Kent & Co., blind manufacturers, for the erection of a factory at the corner of King street and Atlantic avenue, to cost $5,000, and to L. P. Steward, for a two-storey and attic dwelling at 84 Delaware avenue, to cost $2,000.

COLORING SOLDER FOR COPPER.

When it is desired to solder copper and to have the solder the same color as the copper surface, it may be done, says an English exchange, in the following manner: Moisten the solder with a saturated solution of vitriol of copper, and then, touching the solder with the iron or steel wire, a thin skin of copper is precipitated which can be thickened by repeating the process several times.

PLUMBING AND HEATING CONTRACTS.

R. Paulin, Ottawa, has secured the contract for plumbing and heating the St. Jean Baptiste school in that city. The price is $732.

SEND for specimen copy of Phillips' Monthly Machinery Register, containing over 5,000 entries of new and second-hand machinery of every description. The oldest established and most successful medium in the world. Established 25 years for the purpose of introducing those who have machinery for sale, to those who wish to buy, has a circulation of about 50,000 copies per annum, all over the world, and is used for continual reference by a large number of firms. It is consequently a most valuable advertising medium for all engineers and manufacturers. Subscription. 6s. per annum, price per copy, 6d. Sole Proprietor, CHAS. D. NEVER NAG CUSTOMERS.

It is often remarked that, in small stores, the merchant and clerks are so anxious to make sales that they frequently overdo the thing, and in being overly attentive and effusive to customers, they harass and annoy them instead of pleasing them. Nobody, says a writer in Stoves and Hardware Reporter, likes to be hounded into buying, any more than he likes to be absolutely neglected and ignored when he does want to buy. Sales which are made under partial compulsion are never very satisfactory to anyone engaged in the transaction. The customer who buys something with which he is not wholly pleased when he first buys it, will not be any more so after he has taken it home, nor does his opinion of the clerk who persuaded him into buying it rise very high. On the contrary, the chances are that he feels he has been bulldozed more or less and that he has been to some extent the victim of an imposition. It has been maintained that one of the reasons the large stores are so extensively patronized is because their sales force allow perfect liberty of ingress and egress. Visitors and patrons are allowed to go about freely looking for what they want and inspecting goods without being hounded every step of the way by insistent and persistent clerks urging them to buy. There is in this an independence which is most pleasing to people, and which is an evidence of tact on the part of the store management. Care must be exercised not to go to an extreme in this particular and fail to give patrons attention when they want it.

SHEFFIELD CUTLERY IN CANADA.

A pleasant feature of Sheffield business during the last three or four weeks has been an improvement, both in the Canadian and in the Indian markets. Under the new arrangement which the Laurier Cabinet brought about, English goods are admitted at a tariff 25 per cent. below that on German wares. That is one factor which makes for success in British business with our oldest colony. But that is not the only one. The representatives of Sheffield cutlery houses who have returned from Canada state that they were exceedingly pleased to find that everywhere they found a preference to purchase English goods instead of German, American or French. Of all the three rivals, the Germans have been most energetic and successful in their efforts to obtain a firm footing in Canada, but the preferential tariff, combined with the loyal feeling of the people, has practically baffled their efforts, with the result that our leading manufacturers now are convinced that, so long as they send out reliable goods at as narrow a profit as they can afford, the Canadian trade will get increasingly important. —British Trade Journal.

"JARDINE" TIRE UPSETTERS WILL UPSET TIRES

Some machines sold as Upsetters will not. Perhaps you make as much money on the sale of a useless Upsetter as on a good one, but your customer does not. He don't want a machine because it is called an Upsetter; he wants a machine to upset tires. Sell him one of ours.

IT PAYS TO SELL THE BEST TOOLS

CURRENT MARKET QUOTATIONS.

August 18, 1899.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying, and promulgating information, no effort is spared and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world. Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by respectable and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its Offices. **Correspondence invited.**

WHEN WRITING ADVERTISERS PLEASE MENTION THAT YOU SAW THEIR ADVERTISEMENT IN THIS PAPER

MERCHANTS AND TOURIST ACCOMMODATION.

IN TRAVELING, one cannot help being struck with the way in which many places in Canada with natural attractions and advantages are largely deprived of their attractiveness to tourists by the passiveness of the regular residents.

When tourists visit a locality, they are not satisfied with its natural attractions, no matter how famous these attractions may be.

They want accommodation.

"God knows a man cannot work unless he ates," is the remark accredited to an Irishman. And everybody knows that people cannot go holiday touring unless they "ate," and "slape," too, might be added.

Yet, many summer resorts which are all that the heart can desire otherwise are so deficient in the essential of accommodation that not one-tenth the people visit them who otherwise might.

It is as much the duty of the business men in those summer resorts as of any other class to concern themselves in regard to accommodation for tourists at the hotels, etc., in their respective districts.

The better the tourist travel the better it is for the business men.

Every tourist that visits a town or city may not leave money directly with the merchants, but most of them do. And this is certain: There is not a dollar left in a town by a tourist but that a goodly portion of it is not subsequently distributed among the merchants doing business therein.

Wherever there is a village, town or city which has, or should have, attractions for tourists, either winter or summer, there should be an organization of business men and any others sufficiently alive to interest themselves in the matter, whose special duty should be both to induce tourists to visit their particular locality and to see that proper accommodation is provided for their entertainment.

Canada has enormous possibilities in the way of attractions to tourists. No country has probably more in either bulk or variety, but it is deplorable how little this is known. It is true that the attractiveness of the country for tourist travel is gradually becoming better known. It is largely, however, in spite of ourselves. But what might not be done if within the next few months a few hundred live tourist organizations were to spring up in Canada?

WATCHING THE OTHER FELLOW.

Merchants who never make a move until they see what their competitors do never lead; and because they never lead they are never really what can be termed successful.

It is the same in business as in a race: the prizes fall to the leaders.

When a man is preparing for a race, he does not concern himself about what his competitors are doing. All he is concerned about is getting himself "fit."

It is the same with bright up-to-date merchants. They want to get "fit." And in pursuance of this desire, they never cease trying to master the details of their business; they keep themselves informed as to the condition of the market, and as to new goods so that they can buy right; they read trade papers and keep their eyes open when abroad, so that they can gather ideas and enlarge those they already have; they keep their stores in good order and study window dressing and advertising.

Business is not a lottery with them; it is a success.

STEEL WORKS FOR NOVA SCOTIA.

Another large iron and steel establishment is to be organized in Nova Scotia.

It appears that a scheme is being developed in Great Britain whereby the Nova Scotia Steel Co., of New Glasgow, and the General Mining Co. will be merged into one.

The new company is to establish works at North Sydney, which, it is declared, will surpass those of the Whitney syndicate. Shipbuilding and steel rail plants are to be put in and the concern is to be capitalized to the extent of $25,000,000.

The company owns iron ore mines in Newfoundland, and it is understood that 300,000 tons have been sold in Europe for immediate delivery.

THE CANADIANISM OF THE MARITIME PROVINCES.

THE address of Mr. Jarvis, President of the Maritime Board of Trade, a report of which will be found in full elsewhere, should be read and digested by every Canadian.

In point of ability, in extent of information, it is exceptionally rich. But its Canadianism is one of its most striking features.

The Maritime Board of Trade, as its name implies, is a sectional organization; that is, the object of its being is to promote the commercial interests of the three Provinces of New Brunswick, Nova Scotia and Prince Edward Island. Had, therefore, the address dealt with nothing but that which appertained to these three Provinces it is only what might have been expected.

But, while the Maritime Provinces received a large share of attention, an undoubted national spirit was abroad in the address. Even in the references to some of the matters appertaining to the Maritime Provinces one could read between the lines much that was gratifying to national pride.

When Confederation was consummated there was very little in the immediate prospect that was encouraging to the people of the Maritime Provinces; and this is implied in Mr. Jarvis' address. From the rest of the Dominion the Maritime Provinces were as isolated as they well could be. But the Confederationists were walking by faith, not by sight. And the references in Mr. Jarvis' address to the development of the Maritime Provinces prove that they had reason for the faith that was in them.

In the Western part of Canada there is a feeling, which is happily growing less and less every year, that the people of the Maritime Provinces are not in sympathy with them; that they have little or nothing in common nationally.

If those who are that way of thinking had been present at the convention of the Maritime Board, and listened to Mr. Jarvis' patriotic words and the enthusiasm with which they were greeted by the business men representing the three Provinces of Prince Edward Island, Nova Scotia, and New Brunswick, they would have learned how unjust they were in their views.

The people of the Maritime Provinces are as much concerned in the development of the Dominion as the people of any other part of the Dominion. And if more people from Western Canada would hie themselves to the summer resorts of the Maritime Provinces, instead of to summer resorts of foreign countries, they would have an opportunity of learning this as well as of appreciating the beauty and the majesty of the scenery in that part of the Dominion.

FURTHER ADVANCES IN VALUES.

DURING the past week there have been radical advances in several important lines of raw material at points of production. This, and the possibility of still further increase in the cost of supplies, has compelled makers, both in the United States and Canada, to advance prices on several important lines of finished material.

For instance, there have been advances of 15c. in the base price of both smooth steel wire and wire nails, the former being quoted at $3 per 100 lb. and the latter at $3 per keg f.o.b. Montreal, and in Toronto $2.90 and $3 respectively. The list discount on fine steel wire has been reduced from 20 to 17½ per cent., meaning an advance of 2½ per cent. in prices.

Escutcheon pins are 5 per cent. higher also, now selling at 40 instead of 45 per cent. discount off the list. Fence staples are 20c. per keg higher, at $3.25, and double pointed tacks are advanced 5 per cent., the discounts now being 85 per cent. in dozens and 40 per cent. in bulk, instead of 85 and 5 and 45 and 5 respectively.

Other changes are in contemplation in addition to these, but at this writing have not been actually decided upon.

Merchants' bar iron has been advanced 10 to 15c. per 100 lb., the base now being $2.10 to $2.15. Makers' reserve stocks are practically exhausted, and they are so choked up with orders, that a further rise is not at all impossible in the near future. Horseshoe iron has also been marked up 15c. from $2.25 base to $2.40.

Similar strength is noted in raw material abroad, as intimated above. In Glasgow, pig iron has advanced 2s. the ton on the week, and, at Pittsburg, billets have jumped $1.50 the ton to $36.50. Last year, at this time, they were selling at $16 the ton. With this further advance in billets, which makes $3 in the past four weeks, it is quite natural to see the rolling mill men advance their prices.

A TIME TO APPLY PRESSURE.

IT is often said that "misery loves company." We in Canada are prone to complain that commercial interests have to play second fiddle to political interests. There is some comfort in the knowledge that even in so well-governed a country as Britain, commerce feels itself pushed aside in Parliament.

There was a meeting of the Leicester Chamber of Commerce the other day. Some plain language was used in connection with the neglect of business interests by the House of Commons. One member thought that railway influence was predominant in the House. Another argued in favor of forming a commercial party. At present, he said, they could not get commercial legislation passed.

This resembles a condition which is often deplored in Canada. Again and again such subjects as insolvency, a fast Atlantic line, railway rates, etc., are either overlooked or scamped altogether, by reason of the fact that the politicians turn to other questions —and we business men allow them to do so. They should be made to toe the mark. As long as we merchants do not insist on being attended to, why, the political managers will go on with other business.

A good time to remedy this state of things is on the eve of a general election. Governments are believed to be more pliable and more amenable to reason then than at other times. Many persons believe that a general election is at hand in the Dominion.

If, therefore, our merchants have certain legislation or reforms at heart, we would advise them to lay their heads together and make the demand now. Is it insolvency laws, Customs' regulations, or something similar which they want? Let them go in strong deputations to the Ministers and press their claims. They will be listened to.

ADVANCE IN TINNED SHEETS.

Tinned sheets have again advanced. The appreciation is ½c. per lb., and we now quote as follows: 24 gauge, 7½ to 8c.; 26 gauge, 8 to 8½c.; 28 gauge, 8½ to 9c.

THE LESSON OF THE SITUATION.

There is no question but that the outlook this season is exceptionally bright. Large crops and high prices are making the Canadian farmer rejoice; manufacturers of all varieties of goods are working their men overtime at advanced wages; our mineral resources in the Klondyke, in British Columbia, in the new Ontario and in Cape Breton are being developed at an unprecedented rate; the value of our great spruce forests in Quebec, Ontario and New Brunswick are being recognized and utilized as never before; not for years has there been so few unemployed in our large cities.

In fact, in whatever direction one looks; from whatever viewpoint the matter be considered, the result is to strengthen one's belief in the brightness of the outlook for Canada in the next few years. It would be a veritable pessimist who would talk "hard times" to-day.

Yet, a word of caution would not be out of place. The greater the prosperity of the next few years, the more competition will surely be induced to enter the field; and greater will be the reaction when it comes.

There has never yet been a boom without a panic, and exceptional prosperity is generally followed by a reaction.

While this is more true of older countries, and while the continued development of the wheat areas of the Northwest and the mineral resources of many of our Provinces may be depended on as a force to allay or lessen the reaction, yet the exceptional conditions cannot be expected to always prevail.

If, in a country town, the grocers, hardware dealers, druggists, or any class of merchants, evince unusual prosperity, there is a likelihood of new competition. Others not getting as large a share of the good times may enter this seemingly fertile field to get a share of the pasturage. They may be fitted to compete, and soon cut down the revenues of the older merchants to what they had been making before the season of unusual prosperity commenced. They may not be fitted to compete, but, by unwise cutting or giving credit, they may, in another way, hamper the older merchants, and reduce their incomes to a normal figure.

Should then, a merchant refrain from taking advantage of the good times prevailing in the fear of inciting competition? By no means. But he should never allow a year or two of exceptional profits to establish an exceptional rate of personal expenditure.

It is pleasant to increase one's home or personal expenses, but it is neither easy nor pleasant to curtail them.

The wise plan during the good years is to either put the extra earnings into the business or put it into a safe investment, so that when a few lean years come, a reserve will be in readiness for all possible obligations.

The man who lives up to his income obviously cannot ever attain to riches. But he who takes advantage of the good year to lay the foundation of a "banked reserve" may lay at the same time the foundation to a fortune.

In time of peace, prepare for war,
In time of plenty, prepare for want.

A BIG BICYCLE COMPANY.

A syndicate of Canadian capitalists, including the Hon. Geo. A. Cox, Toronto; Warren Y. Soper, Ottawa; W. E. Hart Massey, Toronto; Hon. Lyman M. Jones, general manager of The Massey-Harris Company, and E. R. Thomas, manager of The Cleveland Bicycle Co., Toronto, has purchased four of the principal bicycle manufacturing firms of Canada.

These firms, which are The Massey-Harris Bicycle Co., Limited, Toronto; H. A. Lozier & Co., Toronto Junction, makers of the "Cleveland"; The Welland-Vale Mfg. Co., St. Catharines, makers of the "Perfect" the "Garden City," etc., and The Goold Bicycle Co., Brantford, makers of the "Brantford," have been paid for their business, and the syndicate will assume control of them all on September 1.

The output of the four factories is over 30,000 wheels a year. The new company intends to increase the capacity in many respects. All the different wheels made by the four factories will still be manufactured. It is intended to build up a good export trade, to capture a large proportion of the home trade that now goes to the United States makers, and to start making juvenile wheels and automobiles.

The making of automobiles is a new field for Canadian enterprise, but the company believes that it can produce them at a cost that will bring them within the reach of people of moderate means. At present they cost from $1,500 to $2,000 each. Most of the material used in their manufacture is also employed in making bicycles, and only slight additions to existing plants would be required.

A HEAVY TRADE IN STOVES.

DEALERS who have not yet placed their orders for stoves should do so without delay.

On account of the heavy demand, manufacturers, last year, experienced a great deal of difficulty in supplying it.

But great as the difficulty was last year, it promises to be even more so this year. At any rate the demand, so far as can be learned, is much larger than it was up to this time in 1898.

Heavy shipments are already being made in view of the threatened return of last year's difficulty.

How possible a scarcity of stoves in the future is may be gathered from the fact that the manufacturers cannot now supply their show-rooms with complete lines of samples.

In furnaces, while the heavy shipments are not yet being made, a greater number than is usual at this time of the year are going forward.

CEMENT IS DEARER.

The great development of the Portland cement industry in Canada has been the subject of several articles in this paper. It has been stated that the production of this article has increased from 30,580 to 96,825 barrels in four years, and the output this year is likely to show as great an increase as has been noted in recent years.

The large offering of high-class Canadian Portland has naturally caused a reduction in the sales of German and Belgian cements in the Province of Ontario.

Some large contracts have been let recently. One of these, calling for 12,000 barrels, for the Trent canal, has been secured for the Dominion Government by a Canadian firm, the Rathbun Co., Deseronto, Ont.

The result is that, notwithstanding the great increase in the production, these contracts have combined with the large general demand to raise the price of carload lots of Canadian Portland from $2.50 to $2.60 per barrel. Barrel lots can still be purchased at $2.65 to $2.90 per barrel.

THE MAKING OF A MERCHANT.

By H. N. Higinbotham.

IN discussing the entry of a young man into the retail business there are certain things which are so fundamental that they must be taken for granted. Without them there can be no permanent or substantial success in any undertaking. Among these requirements are character, integrity, and a fair "business head."

The first rule which a young merchant going into the retail trade should make for himself with heroic determination is that of doing a business consistent with his captial. Failure to observe this rule is the rock on which thousands of promising commercial undertakings have gone to pieces. Whether the capital put into the enterprise be large or small, its size should absolutely govern the volume of business.

What should we think of an architect who would start a building on a foundation 40 feet square, and then build without reference to its limitations, until the structure completely overhung the underpinning on all sides? Yet, this is precisely what thousands of young retail merchants throughout the country are attempting to do. They try to brace up their top-heavy structure with the timbers of fictitious credit. These may hold it in fair weather, but when the period of storm and stress comes—as come it surely will—this false support will come crashing down, and the enterprise tumble with it.

My individual conviction is that the only way in which a retail business can be conducted on lines absolutely consistent with its capital is on the cash basis. For this reason, I would not advise any young man to make a venture in retail trade on credit lines. It is too much like working in the dark. Almost inevitably, the accounts grow beyond your control, and the business structure expands at the top while the foundations weaken.

In certain communities, conditions seem to be such that it is practically impossible for the young merchant to introduce the strictly-cash method of doing business. In this event, he has but one hope of success—that is, to watch his accounts with a zealous vigilance that never relaxes, and to act with promptness and decision in the matter of credits and collections. This may require a high order of business and moral courage, but he must be able to do it, if he would avoid wreck.

In his dealings with his creditors, the wholesalers, let the young merchant keep firmly to the rule of incurring no obligation that he cannot with certainty meet in 60 days. Too much emphasis cannot be placed on his connections with the wholesale house or houses from which he obtains his goods. At the very beginning of his venture let him go to the credit man of the wholesale establishment, and state his case without reservation.

So thorough and searching are the means employed by the big wholesale houses to obtain an accurate knowledge of the standing and affairs of their debtors, that it is practically hopeless for the latter to attempt any concealment of unfavorable conditions. Again, the credit men of the wholesale houses are the keenest men in the business, and their judgment of human nature is quick and shrewd. Then, it should be constantly held in mind that the honesty of a patron seeking credit is half the battle, and that their confidence is won by an ingenuous statement of affairs that does not spare the one who is asking for credit.

The first interview of the young retail merchant with the credit man of the wholesale house is sometimes a trying ordeal in which many uncomfortable questions have to be answered. This may incline the beginner in the retail trade to avoid the credit man after the initial interview has been successfully passed. He could make no greater mistake than to allow this association with a disagreeable ordeal to alienate him from a close acquaintance with the credit man. To the contrary, he should improve every opportunity to strengthen and build up a confidential relationship with that important functionary of the wholesale house. Not once, but constantly, should he acquaint the credit man with the real condition of his affairs, and should ask and follow the advice of this counselor on all important matters. The more he does this the better will be his standing with the house and the safer will be his course. Advising patrons is one of the most important duties of the credit man. I place great emphasis on this matter because its importance is so often overlooked by young men starting in the retail trade.

Another cardinal point in the success of the retail merchant is that of having a small but frequent influx of new goods. This is founded on a universal trait of human nature which craves "something new." There is a subtle flattery, practically irresistible, in being shown goods that have not been exposed to the eyes of others in the town.

"Here are some of the latest styles," says the retailer, as he reaches into a packing-box and takes out a bolt of dress goods. "They have just come in, and no one has seen them. You may have first choice, if you wish." This argument seldom fails to effect an immediate sale. And, even if it does not do so, the woman to whom this courtesy is shown goes away with the impression that the young merchant is wide awake and thoroughly up with the times.

The dealer who puts in a small stock at the start and keeps constantly adding thereto with fresh but limited invoices has an immense advantage over the tradesman who buys in large quantities and does not freshen his stock for six months at a time. In these days women are the most numerous and important customers of the retailer, and they do not like to see the same old goods. They will trade where they can find something fresh every time they call.

All big businesses have had small beginnings. I do not know an exception to this rule. This means that a successful enterprise must have a normal, substantial and legitimate growth. If a young merchant finds himself in quarters larger than he at first demands he should change for smaller ones, or partition off a portion of his room at the back. The latter is better than attempting to put in a larger stock than his trade really demands or his resources warrant. It is really better judgment than to attempt to "spread" his stock over a large space for the mere purpose of filling up.

While the proprietor should be the first at the store in the morning and the last to leave it at night, and should be always ready to do anything that he would ask his humblest clerk to do, he should always remember that he must do the headwork of the business. He can hire a boy to candle eggs, sweep out and deliver goods, but if he does not do the thinking and planning it will not be done. That is something that he most faithful and conscientious clerk cannot do for him. If he allows the physical part of the work so to encroach on his time and energies that he does not find opportunity for a frequent and thoughtful survey of his business, he makes a great and a common mistake. This principle is stated forcibly, if uncouthly, in the old expression: "Let your head save your heels."

The young merchant who takes time at regular intervals to make a close summary and analysis of his accounts, and takes his bearings so that he knows precisely his position on the sea of business, is the man who will succeed. In other words, the

WIRE NAILS
TACKS
WIRE
Prompt Shipments
The ONTARIO TACK CO.
Limited
HAMILTON, ONT.

mental part of the business is the most important feature. However, I hold that, at more or less frequent intervals, the storekeeper should personally do every task about the establishment for the sake of influence and example.

Let him take the broom from the hand of the boy and show the latter how to "sweep out" without stirring up a dust or leaving dirt in the corners; this will give added respect in the eyes of the boy, and the store will thereafter be cleaner by reason of the example; and so with every task, no matter how trivial or humble.

Then, the young merchant will do well always to bear in mind that courtesy is the biggest part of his capital. This does not mean that he should be obsequious and fawning, but simply and invariably attentive to all who enter his place of business.

The matter of advertising is not an unimportant detail. In the local newspaper the young retailer may wisely use a limited amount of display advertising space. This will be most advantageously occupied by a simple, dignified and modest announcement of new goods. Like his stock, the subject matter of his advertisement should be kept fresh by constant change. It should also have the individual quality both in its wording, form and type—something that expresses the personal good taste of the advertiser.

There is no doubt that a neat circular or folder sent personally to patrons is a strong method of advertising. Such announcements may be delivered by messenger or distributed through the mails. Best of all is the neat personal note written to the merchant's best customers, calling attention to fresh arrivals of goods. The spare moments of a young merchant may be put to a far less effective use than this writing of individual advertising letters.

It is scarcely possible to put too much emphasis on attractive window displays. Here, again, the element of constant freshness plays an important part. The displays should be frequently changed, and, while striking, they should never fail to have the quality of good taste. Good statuary, pictures, curios and art objects of every kind may be used to unfailing advantage in dressing windows, and they always command the attention and admiration of women. It pays the enterprising merchant to secure the loan of works of art for this purpose, and they are not difficult to obtain.

In looking after all these details, which are of importance in the general result, the young retailer should not fail to keep a proper perspective of his business as a whole. He should know just where he is sailing, and be sure that he is not drifting. In this way, he will become a safe pilot, and will bring his enterprise into the harbor of success and independence. And the prosperous retail merchant is a very independent and respected member of the community in this country, where the honest tradesman commands the regard to which he is entitled.

CONSTANT ASSISTANCE

from us in the way of advertising helps and suggestions means a great deal to any enterprising merchant. It means progress and success.

We have spent thirty years in perfecting our present advertising system so as to make it the greatest help to dealers. We believe that the way to reach the consumer is through the dealer, and all our advertising efforts are directed to that end. Our regular methods are supplemented by special, personal help. We are always at the service of our customers. We want to give all the help we can, not in paint selling alone, but in general business as well.

Backed by The Sherwin-Williams goods and advertising, you can sell more paint than in any other way.

Do you want particulars?

CATALOGUES, BOOKLETS, ETC.

ENAMELED-WARE CATALOGUE.

The catalogues issued by the enameled-ware manufacturers of Canada will, as a class, compare favorably with the catalogues of any class of article produced in this country. One of the best of these that has ever been received by HARDWARE AND METAL is the catalogue just issued by The Ossekeag Stamping Co., Hampton, N.B. The value of this work does not consist only n its great beauty, but in the truth of its illustrations and in the lucid descriptions and price list which it contains. The work is well worth sending for.

WHILE AT THE FAIR.

Those patrons or friends of The Gurney Foundry Co., Limited, Toronto, who have in past years visited the warerooms of this company during Exhibition time, will not fail to accept, if possible, the invitation that this company sends out to them to call again this year. The sole exhibit of this firm will be, as in former years, at 500 King street west. Their large display will include a number of modern goods, which have been added to their stock during the year.

For the convenience of those of their friends who cannot visit Toronto, this company intend making a complete exhibit of their leading lines at the store of Joseph W. Chambers, 382 Richmond street, London, during the dates of the Western Fair.

MANY KINDS OF BASKETS.

John H. Grout & Co., Grimsby, Ont., have issued a brief folder describing the various styles of boxes, crates, etc., made by them. One of the latest productions is their "Ideal" crate for berries, etc. It is so constructed that there is sufficient space between the berry boxes and the intersections to prevent crushing of berries and allow lots of air space for ventilation. The "Climax" baskets made by this firm have already earned an excellent reputation. The folder, which contains a price list as well as illustrated descriptions of the various lines manufactured, can be had upon application.

J. & G. Powell, general merchants, Tilbury, Ont., have assigned to C. B. Armstrong, and a meeting of their creditors will be held on August 25.

BUSINESS CHANGES.

DIFFICULTIES, ASSIGNMENTS, COMPROMISES.

PIGEON & CO., general merchants, Ottawa, Ont., have assigned, and their creditors meet on August 28.

Mary E. McNaughton, general merchant, Creemore, Ont., has assigned to Robert R. Hall.

Mrs. J. A. Blondin, general merchant, St. Maurice, Que., is offering 40c. on the dollar.

F. P. Bruneau, general merchant, Lyster Station, Ont., has assigned to Bilodeau & Renaud.

Herman Cleland, general merchant, Hallsville, Ont., has assigned to W. B. Lawson.

Urgel Plouffe, harness dealer, Penetanguishene, Ont., has assigned to A. B. Thompson.

Copartnership has been registered by McKay, McAskill & Co., general merchants, Baddeck, N.S.

J. A. Palmer, general merchant, Maple Creek, N.W.T., has admitted A. J. Smith under the style of Palmer & Smith.

The creditors of Isaac Lewis, contractor, Westmount, Que., whose liabilities are placed at $5,000, have arranged for a meeting on August 28. Robert Lewis, of Westmount, has been appointed provisional manager of the estate.

PARTNERSHIPS FORMED AND DISSOLVED.

Annie Trudel has registered as proprietress of J. F. Trottier & Co., general merchants, Grand Mere, Que.

J. L. Johnson & Co., hardware dealers, etc., Edmonton, N.W.T., have dissolved, J. L. Johnson continuing.

Charles Malburn and Florent Mouille have registered partnership under the style of T. Mouille & Co., locksmiths, Montreal.

Joseph Laporte and Aristide Valiquette have registered partnership as coal dealers, under the style of Valiquette & Laporte, Montreal.

CHANGES.

Joseph St. Onge is starting a general store in St. Onge, Que.

Charles Robertson, general merchant, Strabane, Ont., is removing to Alberton, Ont.

George Keeley, blacksmith, Vankleek Hill, Ont., has given up business in that place, and has started in Ottawa.

Antoine Robert has registered as proprietor of the Canada Lamp, Brass and Aluminum Works Co., Montreal.

Agnes Robillard, has registered as proprietress of A. Robillard & Co., bricklayers, Montreal.

SALES MADE AND PENDING.

Thos. E. McMillan, blacksmith, Ottawa, has sold out.

The real estate and plant of J. W. Smith, electrical contractor, Point Gatineau, Que., has been sold.

E. Newton & Co., general merchants, Greensville, Ont., have sold out.

The assets of H. R. Noyer, general merchant, Bic, Que., are advertised for sale.

The C. Dahl Co., general merchants, Orangeville, Ont., have sold out to Armitage & Lee.

FIRES.

Pimodon Langlois, general merchant, Kamouraska, Que., has been partially burned out.

T. W. Nolan, carriagemaker, Buctouche, N.B., has been burned out; insured.

DEATHS.

I. G. Hutchinson, general merchant, Brighton, Ont., is dead.

F. X. Gougeon, hardware dealer, St. Henri de Montreal, is dead.

A SUCCESSFUL MAN'S VERDICT.

C. P. HUNTINGTON, president of the Southern Pacific railroad, who rose from the hardware business to his present position in the railroad world, relates to an exchange his advancement in life in the following interesting manner :

"It was merely evolution. I had been a trader from my youth. I began gathering shillings when I was eight years old, and had a wide experience before taking up railroad work. It was not a jump for me.

"It isn't by sudden jumps that healthy success is attained. It's by steady work and honesty of purpose. A middle-aged man may jump from one business to an entirely different one and succeed, but it will need hard work and the probabilities will be against him. The foundation of success is laid in youth.

"Between the ages of 15 and 22 most men are made. A man can learn more in those seven years than in any others in his whole life, yet those are the years that many youths spend at college unfitting themselves for commercial pursuits, learning things that are of no use to them—actually building up a barrier against success.

"The successful man learns the rudiments of business in early life. The unsuccesstul man is the one who in his youth watched the clock to see that he did not begin work a minute ahead of time—or quit a second behind it. Those are the boys who are discharged first, whenever the staff is reduced ; but the boy who thinks of working instead of quitting, and looks after his employer's interest instead of his own ease, is the man who is kept on, and goes ahead and succeeds.

"Success is a simple thing. The money saved in early life grows in fortunes later on. The young man who can always save 10c. a day is a man of sense. He is on the road to success. But the young man who trades this 10c. for a cigar is a fool.

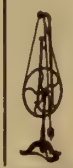
"There may be cases where fortunes are made by jumps, but great success comes from persistent effort. It is a mistake to point out the accomplished work of a successful life and ask a young man to duplicate it. The immensity of such a work appals him. It is like taking him suddenly to the top of a high steeple to see a great city. The great height makes him dizzy, but to the steeplejack, who knows his business and has scaled the steeple, it is quite a little matter. That is the reason why rising men should not look ahead. They should work for to-day and to-day only, and if they do that faithfully and live economically, they'll be ready for whatever comes on to-morrow.

"My part in the organization and building of the Central Pacific did not seem a great task for me, because my hardware business, when I laid it down, was greater than my railroad business when I took it up. I called it a hardware business ; we bought and sold all kinds of things—thousands and thousands of dollars worth of goods that never saw the inside of our store. We bought whole cargoes and sold them direct from the ships. I recall buying one cargo at 10 per cent. above the invoice prices, paying only $5,000 down. The aggregate business done by our firm amounted to perhaps more than $5,000,000 annually, and so the organization of the Central Pacific came as a comparatively easy task."

WHAT TO DO ON DULL DAYS.

It is a good time when business is rather slow to burnish and polish up plated wares, brass goods, etc., which have grown tarnished from damp air, dirt and neglect. These goods present a very bad appearance when tarnished. Do you have a water cooler near the door with plenty of ice water in it? If you do not, it would be well to put one up as soon as possible. Customers will be highly appreciative of the convenience. Also have plenty of palm-leaf fans handy ; they will all be needed. When dressing windows this time of the year it would be well to use draperies which are cool in color ; that is to say, blue or green. Red or yellow give the impression of warmth and should be reserved for winter use. Everything should be done now to give an appearance of coolness at least. Ice coolers, filters and everything intended more particularly for summer use should be prominently displayed. If it is possible odd lots of goods should be closed out cheap, instead of keeping them till next season, for by keeping them just so much money and store room are tied up.

OF INTEREST TO THE TRADE.



During Fair time, this year, as in recent years, The Gurney Foundry Co. have decided to welcome all visitors at their own commodious show-rooms instead of making an exhibit on the Fair grounds. All friends and patrons of the firm, and all interested in any of the many lines of cooking and heating goods they manufacture, will receive a cordial welcome at 500 King street west, Toronto, where the ample space of their show-rooms will give everyone a chance to view the various good at leisure and in comfort. As cars to and from the Exhibition Grounds pass the door every minute, visitors to Toronto will find it very convenient to drop in and see the extensive lines manufactured by this well-known firm.

CONVENTION OF THE MARITIME BOARD OF TRADE.

BUSINESS MEN FROM NEW BRUNSWICK, NOVA SCOTIA AND PRINCE EDWARD ISLAND MEET AT ST. JOHN AND DISCUSS LIVE SUBJECTS.

THE Maritime Board of Trade, composed of representatives from the Provinces of New Brunswick, Nova Scotia and Prince Edward Island, held its fifth annual convention in St. John, N.B., on August 16, 17 and 18. This is the second time the convention has been held in St. John, the first meeting having been held there.

The convention was opened on Wednesday evening shortly after 8 o'clock. President W. M. Jarvis, of St. John, N. B., was in the chair, and about 60 delegates were present. The names of the delegates present at this and subsequent sessions were as follows :

St. John — W. M. Jarvis, S. Schofield, D. J. McLaughlin, W. S. Fisher, W. F. Burditt, George Robertson, I. I Barry, J. A. Lakely, T. N. Estabrooks, W. F. Hathaway, F. A. Dykeman, C. E. McMichael, T. H. Somerville, T. H. Hall, H. A. Harvey, James Jack, W. H. Thorne, T. B. Robinson, F. S. Potts.

St. Martin's—W. H. Moran.

St. Stephen—G. W. Ganong, M.P., E. G. Vroome, A. I. Teed, F. M. Murchie.

Amherst—B.W. Ralson.

Berwick—H. V Broome, J D. Clarke, jr.

Ridgetown—John Erwin.

Charlottetown—H. Hazzard, George Hughes.

Chatham—D. G. Smith, W. S. Loggie.

Dartmouth—J. B McKenna.

Halifax—C L. Dodge, James Seely, G. E. Calkin, M. G. DeWolfe, R. S. Eaton.

Kings County Fruit Growers Association—P. Innes.

Middleton—O. E. Roger, F. E. Cox.

New Glasgow—C. G. Armstrong, J. D. O'Connell, W. B. McKay, M. Heustis.

Woodstock, N.B. — Alex. Henderson, James Carr, T. C. L. Ketchum.

Hartland, N.B.—J. T. G. Carr.

Digby—G. T. Detney.

Mr. H. C. Creed, secretary of the Halifax Board of Trade, occupied a seat at Secretary F. C. Allison's desk, and lent the latter gentleman his assistance.

"I think, gentlemen," remarked President Jarvis, after the roll had been called, "that we can congratulate ourselves upon having the best and most representative gathering we have ever had." Everybody smiled and said "hear, hear."

The number of boards represented at the meeting was 16.

A telegram was read from the Sydney, C.B., Board of Trade regretting inability to send delegates. The Kentville board wrote tendering best wishes and inviting the Maritime Board of Trade to hold its next annual convention in that town. The Montreal, Ottawa and Kingston Boards of Trade wrote regretting inability to accept an invitation to send representatives to the convention.

President Jarvis : "I might explain that we sent invitations to six of the principal boards of trade in Western Canada, and I regret that none of them have been able to send representatives.

SECRETARY'S REPORT.

Secretary Allison presented his report, which read as follows : Your secretary-treasurer begs herewith to hand you his report for the past current year. After the close of the last annual meeting, which was held at Truro, on August 17, 18 and 19, 1898, the secretary, Mr. G. A. Hall, handed to me the books and papers of the Board of Trade of the Maritime Provinces, together with a financial statement for the fiscal year 1897-1898, showing a balance in favor of the board of $36.35, which amount was also paid to me by Mr. Hall. I herewith beg to hand you separately my account for the past year, showing a balance of $67.80 in favor of the board. On September 15, 1898, a meeting of the council was held at St. John, which was attended by delegates from the Boards of Trade, of Halifax, Kentville, Sussex and St. John, at which, in addition to other business, it was decided to hold the present annual meeting at St. John.

The following is an alphabetical list of the boards of trade now established in the Maritime Provinces :

GENERAL VIEW OF ST. JOHN.

Amherst, N.S.	North Sydney, N.S.
Berwick, N.S.	New Glasgow, N.S.
Bridgetown, N.S.	Parrsboro', N.S.
Charlottetown, P.E.I.	Pictou, N.S.
Chatham, N.B	St. Andrews, N.B.
Dartmouth, N.S.	St. John, N.B
Fredericton, N.B	St. Martin's, N.B.
Halifax, N.S.	St. Stephen, N.B.
Kentville, N.S.	Springhill, N.S.
Kings County, N S.	Sussex, N.B.
Londonderry, N.S.	Sydney, C.B.
Lunenburg, N.S.	Truro, N.S.
Middleton, N S.	Windsor, N.S.
Moncton, N.B.	Wolfville, N.S.
Newcastle, N.B.	Woodstock, N.B.

The report, on motion, was received.

President Jarvis : "Our constitution and by-laws declare that one delegate from each board shall form a committee to determine the order in which matters for discussion shall come before this convention. The

board which has the largest membership has the right to name the first subject, the next the second, and so on."

NOMINATING COMMITTEE.

The following nominating committee was named: Messrs. D. J. McLaughlin, St. John; M. G. DeWolfe, Kentville; W. S. Loggie, Chatham; J. M. Carmichael, New Glasgow; H. Hazzard, Charlottetown; John Ervin, Bridgetown; J. E. DeWolfe, Halifax; W. V. Brown, Berwick; Alex. Henderson, Woodstock; A. I. Teed, St. Stephen; W. H. Moran, St. Martin's; P. Innes, Cold Brook; J. B. McKenna, Dartmouth; F. E. Cox, Middleton; C. J. Armstrong, Sussex.

On motion of Mr. John Ervin, of Bridgetown, the members of the above committee were also appointed a committee to nominate the officers for the ensuing year.

THE PRESIDENT'S ADDRESS.

President Jarvis then delivered his annual address, which was as follows:

It will be five years next October since the conference to which the Board of Trade of the Maritime Provinces owes its existence was held at St. John. Upwards of 20 years ago a Dominion Board of Trade was established, and, in July, 1874, its annual meeting was held in this city, and the St. John board gladly welcomed their friends from other parts of Canada. But the difficulties of maintaining so extended a connection proved too great, for the time at least; and, finally, the meetings of the Dominion Board were discontinued.

When the conference in October, 1894, was proposed, there was very little thought of its expansion into a Maritime Board of Trade. But the president of the Halifax board was able to attend the meeting. He was warmly welcomed. It was felt that benefit could not but result if such gatherings could be held from time to time. In August, 1895, the Maritime Board of Trade was organized at Halifax. In 1896 a constitution and rules were formally adopted at St. John; and it has since met at Charlottetown, in 1897, and at Truro, in 1898.

MARITIME AND LOCAL BOARDS.

Perhaps it may be well at the outset to admit that even yet the Maritime Board has hardly passed beyond the experimental stage.

With the local boards it is different. Here and there some one may flag for a time, but it is unlikely that, at least in the larger centres, they will ever cease to exist. And, indeed, their existence and their vigor may be taken in some degree as an index to the life and energy of the locality in which they have their place. The scope and interests of the local board are coming to be generally understood. The first thoughts of its members are given to the well-being and prosperity of the place in which they live. It claims in return the support of the citizens whom more or less directly it represents. There is no interference with the municipal authorities as representing the people at large. But as the duties of such municipal bodies are largely administrative, the need is felt for another organization, representative in a limited sense only, composed in part perhaps of such members of the municipal bodies as can spare time for the consideration of public questions outside the administrative routine, but including also other citizens who can act with them in considering matters of public interest and suggesting measures which may promote the general good. Suggestions emanating from such a body can carry weight only in proportion to their intrinsic worth, and the arguments by which they may be sustained. The boards of trade exist as means through which information may be circulated at home and abroad, as channels through which the views of their members can be made public, criticized, approved or condemned, and as factors in the education of the public mind. If they are consulted by the governing bodies on matters of local importance, it is only because they represent and centralize the opinions of the citizens whom their membership includes.

The Maritime Board has a wider field, and that very circumstance deprives it in some degree of the interest which attaches to the local boards. It appeals to us as dwellers in the Maritime Provinces of Canada, as Acadians, shall I say? For I think that that good old word should not be left altogether to our fellow-countrymen of French descent. But the Acadian idea is in its infancy. Too often in the past have the Maritime Provinces shown a divided front, and too often, indeed, have differences appeared within the Provinces themselves. We are beginning now to realize how much we have in common, and that in union there is strength. We are being welded together as our relations became more intimate and intercourse extends. We find in the existence of this Maritime Board the expression of a desire for yet closer union. Its well-being can be threatened only if it it is found to be in advance of the general desire for such union that exists.

The Maritime Board of Trade was formed to strengthen the ties that bind these Provinces together. It furnishes a means through which questions of extended interest may be brought into more general notice by the local boards. It is intended to bring together delegates from all parts of the Maritime Provinces, and to enable them to enter into each other's circumstances and each other's wants. A legislative union of the three Provinces has often been thought of as a means of harmonizing divergent interests and enabling them to present a united front. The difficulties in the way of such a union have proved insuperable. But the Maritime Board of Trade, if it can be maintained, may furnish a field where such wider questions can be considered, information can be extended, local jealousies removed, and a more united action encouraged and even secured.

And the Maritime Board may well prove useful, too, in extending through the rest of Canada the more intimate acquaintance with the varying interests of Nova Scotia, New Brunswick, and Prince Edward Island, which it promotes at home. It is impossible to pay an extended visit to the Upper Provinces or the West without realizing how little is known of Maritime interests there. Our summer visitors come very largely from the United States. We gladly welcome our cousins from the South, but we have ample room, also, for our brethren from the West. Trade relations are slowly extending, but very much yet remains to be done.

This meeting, indeed, has furnished an opportunity to invite the presidents of the principal boards of trade in Ontario and Quebec to be present with us, which has been gladly welcomed. A suggestion made by the editor of The Monetary Times, at Toronto, was acted on, and invitations were sent out as soon as the necessary railway arrangements could be made.

When the Dominion of Canada was established in 1867, the

MARITIME PROVINCES WERE CUT OFF

by the forests of south-eastern Quebec. Seven years passed before Prince Edward Island joined the union, and nearly ten before the thin iron line of the Intercolonial railway cut through these forests, and gave an easy access to the St. Lawrence and the West. It was nearly ten years more before the completion of the Canadian Pacific railway brought us within less than a day's journey of Montreal. Until these connecting links were established, it was not to be expected that mutual intercourse would extend. And, unfortunately, even at the present day, our fellow-subjects elsewhere in Canada seem unable to realize the resources of the Maritime Provinces, or the extent to which the well-being of all Canada is bound up with their development. Millions may be spent on the canals and other public works of the interior, on the harbors of Montreal or Quebec, or on railways in the West. But appropriations for Halifax, St. John, or some other Maritime Province point, are keenly and jealously watched.

Let us be careful that we do nothing among ourselves to increase this tendency, and let us not forget that it exists. It is natural that our claims should be thought lightly of by those who, cut off in the past from us as we have been from them, have learned to look to Boston and New York as their most convenient outlets, and who have never realized the advantages which the Maritime Provinces possess and the facilities which their ports can supply. It is unnatural when the just claims of some struggling centre are spoken lightly of, or opposed even, from a want of interest or fancied rivalry among ourselves. It is fratricidal. The Maritime interests must develop together or not at all. Whatever may be urged from any one point against another will most surely turn against its authors in the end.

It is not, I think, too much to claim that the Maritime Board of Trade has already given proof of its usefulness. Not only have several harmonious gatherings taken place, but their effect has been lasting. Warm friendships have been established. Halifax and St. John are coming to look on each other with less of rivalry and a growing desire for each other's welfare. Prince Edward Island can feel that its interests have a place in the thoughts of those on the mainland. And those who met last year at Truro were able to realize not only the hospitality, but the beauty of our inland towns, and brought away with them pleasant recollections not soon to be effaced.

Year by year, if these meetings can be maintained, the benefit must increase. We have much to interest us: The coal and iron interests of Sydney, North Sydney, New Glasgow and Pictou; the lumber industries of the Miramichi; the commercial activity and growth of Truro; the manufactories of Moncton, Woodstock and almost every other town; the wonderful recuperative power which Windsor has shown since the devastating conflagration in 1897; the summer attractions of Fredericton, Wolfville, Kentville and the many other points of beauty in a fair country which is a tourists' paradise throughout; the growing traffic at Halifax and St. John; mines being developed; factories starting into existence; fisheries prospering; agriculture and commerce extending. Such topics are coming to have more than a local interest, and, as each new development is heard of, it should be felt that, wherever within the three Provinces it may have its place, it cannot but contribute to the good of all.

THE GROWTH OF THE MARITIME PROVINCES.

We have, in these Provinces, a rich inheritance. It is a new country. Little more than a century ago it was a wilderness. Look at the contrast now. The natural features are the same. Halifax and Sydney had their magnificent harbors. The St. John river then, as now, flowed for nearly 500 miles from its head waters to the sea. But the forest wealth has been reached, though not exhausted. The fertile land is tilled, though there is an abundance for the new settler still. Mineral wealth has been found where its existence was not dreamt of. Two thousand miles of railway bring each city, town, and village, even, into close connection with others and with the world beyond. Steam vessels, furnishing every comfort to their passengers, ply, during the open season, on the River St. John, through the Bras d'Or lakes, and elsewhere. The Bay of Fundy is crossed from St. John to Digby in two hours and a half. Along the coast from St. John to Eastport and St. Andrews in one direction, and to Yarmouth, the towns on the westward shore, and Halifax in another, and from Halifax to Sydney and beyond, regular services are maintained; and to Prince Edward Island two steamship routes are open during the summer and one during the winter months.

In the cities and larger towns electric railways carry their passengers for a trifling fare. The telephone brings each house and village, even, into close connection with the rest. Coal gas and electricity furnish us with light, and, where these are not available, the earth oils are to be had at a trifling cost. Fuel, both coal and wood, is abundant, and, if we have a longer winter than more southern climes, in the warmly-built houses we have learned to construct, we scarcely feel the effects.

Factories have extended and new industries are springing up. There are the sugar refineries at Halifax; the large cotton mills at six different points; the pork factory at Charlottetown; the pulp mills at Chatham and St. John; steam sawmills and other woodworking factories, foundries and machine shops, smelting works, nail factories, paint factories, canning factories and woollen mills; the wrapper factory at Woodstock, the stamping company turning out glazed ware at Hampton, and other manufactories of almost every description steadily making good their foothold at these and other points.

Agriculture, too, in the widest sense of the term, is improving. Yearly exhibitions encourage the farmer in the production of better stock. The old staple crops—hay and potatoes—are still grown, but the tendency is towards utilizing these bulky products, not easily sent to an outside market, for the growth of stock and the manufacture of cheese and butter at home. The apple product in Nova Scotia, on the Upper St. John and elsewhere, is extending. Small fruits are produced in abundance. Some parts of the Maritime Provinces indeed, and, especially Prince Edward Island, seem intended by Nature to furnish the later garden product for the rest of Eastern Canada and the Northern States. Asparagus luxuriates in the rich Prince Edward Island soil; and where, 40 years ago, the cultivated berries were almost unknown, and the wild fruit only was to be had, we have now the garden fruit everywhere exposed for sale; while the poorer farmers have turned the wild fruit to advantage, and the strawberries, raspberries and blueberries, grown in barrens and clearings, are gathered by their children and give a ready cash return.

We speak of the poorer farmers, and yet pauperism, as it exists in older countries, is unknown. There are hospitals and there are almshouses for the suffering and the unfortunate. But a considerable proportion of those cared for at the public expense are waifs from other lands, and the remainder, almost without exception, consist of those who might have done better if they would.

And in many a country district poverty, even of this kind, is almost unknown. Our public school system furnishes a free education to all. Artizans and laborers find employment at good wages. There is a livelihood for all who will work, if not in the towns, in the country where there is ample room and to spare.

The days of wooden shipbuilding are passing away, but there is good ground for hope that before long iron shipbuilding in the Maritime Provinces may take its place. The iron and steel works now under construction at Sydney will bring its noble harbor to the front. Halifax, long the headquarters for the North American station of the Imperial Navy, has now its dry docks, and furnishes not merely an Atlantic seaport, but a safe retreat for vessels disabled or in distress. St. John hopes to have its dry dock too, and the two cities are striving side by side to secure their due share of the great and growing traffic coming from the rich farming lands of the interior. Their rivals in the United States, Boston and Portland, supported by the Central Government at Washington, are straining every nerve to keep to the front. But for four winters regular ocean freight services have been carried on by steamship lines from Halifax and St. John. New grain elevators now under construction at each port will be in readiness for next winter's use. And Charlottetown is to have direct steamship communication with Liverpool as well.

The picture may seem a bright one, but is it overdrawn? Put it at the least, and, if some Rip Van Winkle of but 60 years ago could awake, would he not think himself in some singular dream rather than in this portion of the busy world in which we live?

HINDRANCES.

And if I remind you of the progress which has been made, it is in no spirit of boasting but rather as an encouragement to future effort. Much has been done, but very much remains. There has been much in the past, and there is much now for which we should be thankful to the Giver of all good, and yet we must not forget that future progress, while not dependent altogether upon ourselves, cannot be maintained unless prudence and energy continue to be shown. The foundation is but laid. It is for us and those who come after us to build upon it, and to build with such harmony of purpose that each may advance the common good.

There is no marked wealth in these Maritime Provinces. While there is very general comfort, there is little of what may be called affluence, and, of what there is, very much is invested where assessors cannot reach it, or concealed.

Capital is required for the development of new industries, and it is well known that several of those recently originated could not have been established without assistance from abroad. This is one of the drawbacks we have to deal with. The boards of trade may well consider in what way it can best be met.

In our temperate climate we are free from the earthquakes of the tropics and the tornadoes of the west. Our seasons are not always equal, but we have never undergone the long drouths which are impoverishing our sister colonies in Australia, and almost forcing them to call for outside help. But we may have poor seasons for the farmer still, or in some other way our progress may be checked.

The city of St. John, in which we meet, has had its sad experiences in the past. For the first 50 years of its existence it prospered through the influence of import duties levied in the United Kingdom on Baltic lumber. Gradually they were reduced, and at last repealed, and there followed a period of trouble and distress. Then came the days of wooden shipbuilding, and St. John became not only celebrated for the vessels it produced, but one of the great ship-owning ports of the world. Wooden ships gradually passed out of use, and then, again, came depression and decay. And upon this followed the disastrous conflagration of 1877, when nearly $15,000,000 worth of property was destroyed, and less than half of this was insured. But St. John, supported indeed and encouraged by the kindly sympathy and generous contributions of her friends, rallied from the shock, though it was many years before the loss was overcome.

Windsor, too, Bridgewater and Digby, and even St. John in part again, have suffered more recently. Such trials have everywhere to be met. They teach us to husband our resources, but they should never damp our energy. It is to the present we have to look. I have spoken of the past. I think there is much to encourage us now.

THE PRESENT CONDITION OF THE MARITIME PROVINCES.

Within the Maritime Provinces, while much will yet depend upon the weather of the next few weeks, there is every prospect of an abundant harvest. Mr. Bigelow, the president of the Nova Scotia Fruit Growers Association, tells me that it is expected there will be 400,000 barrels of apples for export this year, against 300,000 exported in 1898. Strawberries and other small fruits have been plentiful among ourselves, and in good demand abroad. Though in some sections the grass was partially winter-killed, the hay crop will be a good one generally. The potato and other root crops promise an abundant yield. Oats, also, are promising well. The growth of wheat is being developed. A larger acreage seems to be coming under cultivation. More stock is kept by the farmers, and dairying is generally on the increase.

The lumber cut of last winter was probably from one-third to one-fourth below the average, but the high freshet and subsequent rains have enabled the lumbermen to get out a large supply of logs. Less than 5 per cent. of the cut has been hung up. There may not be enough to keep the mills busy during the whole year, but prices have improved. The English market for lumber has been firm, and shingles again are in general demand.

Factories of all kinds are busily at work, and the energy of the manufacturers is steadily extending their market over Canada and elsewhere.

Notwithstanding the recent accident at the Caledonia mines, near Glace Bay, the output of coal for 1899 will be larger than in any previous year. The introduction of improved machinery is enabling the gold mines of Nova Scotia to be worked to greater advantage, and the product is steadily increasing. With the completion of the iron works at Sydney the annual production of pig iron in Canada will, in the near future, be more than doubled. Mineral products of various other kinds are being worked or developed.

The trade of the year has been fair. Failures have not exceeded the average, and business seems generally to be in a healthy state. The hardware business has a sister association of its own, and aims to bring its interests throughout the Maritime Provinces into one. Quietly, but steadily, the wholesale trade in every department is being developed. It would, I believe, extend much more rapidly but for the pressure of municipal taxation, to which I shall presently allude.

It would be out of place in this connection to give statistics of the progress in the various industries, even were I in a position to do so. Such statistics are essentially of a local nature, and should be furnished rather by the local boards. But it is safe to say that, throughout the Maritime Provinces generally, there is every reason to feel satisfied with the present condition of affairs, and reasonable ground to hope that the general prosperity may continue and increase.

PREFERENTIAL TRADE.

The Maritime Board of Trade, during its brief existence, has dealt with many important questions. First among these stands, I think, the position affirmed at Halifax, in 1895, that the products of Canada should be exported through Canadian ports. The memorial based upon the resolutions then adopted has been acted upon by the Government of the Dominion. Subsidies for Atlantic steamship services are now offered only when the western port of arrival and departure is within Canada itself. This great principle has become fully recognized and generally accepted. It seems unlikely that any subsidy will hereafter be given, as such subsidies were given for years in the past, to assist in building up the commerce of foreign ports.

The day may come when such subsidies will no longer be required, and I feel certain that there is no member of this board who will not rejoice when such shall be the case. It would mean that all Canada was at one in its desire for preferential trade within this great Dominion. It would mean that Canada was complete in itself, and at last taking its due place in the great British Empire encircling the world. It would mean a thorough development of commerce from our ports. Mails and passengers would no longer be conveyed across the Atlantic by the longer, but by the shortest possible routes. Paying freight services from the Maritime ports of Canada must bring fast passenger and mail services in their train. The one is but the development of the other, or rather its complement. As the traffic extends the correspondence expands, and the merchant will himself cross the Atlantic again and again to establish and regulate his connections on either side.

But, while our railway connections were incompleted, vast interests have grown up to the south, and fast lines of steamers have been established with which it would be hopeless, without some such temporary aid, to compete. Not only is the longer railway haul against us, but facilities for the export trade have been established at ports in the United States which we can only hope to gain in time. Canadians are not given to change. They have become accustomed to the established routes. It will take years, perhaps, before our fellow citizens in the interior learn to look on the Maritime Province ports as their business outlets and to give them the preference even on equal terms.

And, again, the

QUESTION OF RETURN FREIGHTS

has to be considered. Rapidly as the Maritime Provinces are developing, the traffic originating within their limits is as yet comparatively small. Steamship owners naturally desire to carry freight both ways, and it is the same with the great railway lines. Only as preferential trade within the Empire becomes thoroughly developed can it be hoped that full freights will be found for the great carriers by land and sea, and only as such full freights are found can it be hoped that the freight will be carried on the most favorable terms.

Meanwhile, in order that such traffic may be developed, the subsidies are given. And, surely, with such an end in view no patriotic Canadian can object to their continuance for a time.

It was hoped at one time that the older of the great Canadian railway systems, established by British capital and controled from the Motherland, would have carried its rails across New Brunswick to Salisbury or Moncton, and thence found outlet at Halifax, St. John or elsewhere, over the Intercolonial railway or parallel lines. Unfortunately this purpose, and I believe it was once thought of, seems to be abandoned, and Portland, Me., is being built up through its means. We have still the Canadian Pacific and the Intercolonial routes with their outlets at St. John and Halifax. While these great lines, the one under private and the other under Government control, must have their rivalries, they have also great common interests which should lead them to work harmoniously together. It is only through their doing this that their great work can be successfully carried out.

The resolution adopted four years ago at Halifax was but a step towards the accomplishment of a purpose fast gaining a foothold in the minds of subjects of the British Empire throughout the world. We wish to maintain friendly relations with all men, and especially with those who are our brethren, who are of the same race, speak the same language, even though they may prefer a different form of Government to our own. But the Imperial idea is gaining ground, and finds its expression in the topic "Imperial Trade within the Empire," which has been suggested for your consideration now.

PRINCE EDWARD ISLAND.

Improved communication between Prince Edward Island and the mainland has also been already considered and should always have a place in our thoughts. I think sometimes that our Island friends have many and great advantages. If they are cut off from us by a few miles of sea they have wonderful resources within themselves. Their Island is a garden whose capabilities are only beginning to be developed. The Straits of Northumberland are so narrow that the songbirds cross with ease, and yet they may serve to keep more noxious visitors away. And, so, luxuries which are not always benefits may be shut out, and perhaps the home of a prosperous Prince Edward Island farmer is, in all that makes up the truest enjoyment of human life, one of the happiest in the world.

But for purposes of trade, if on no other account, the most ready communication with the mainland is required. Another steamship has just been completed for the winter route. This may well be supplemented by a telegraphic service on the same terms as that enjoyed over the rest of the Dominion.

IMPROVED TRAFFIC SERVICES, PASSENGERS AND FREIGHT.

Last year, at Truro, the Maritime Board urged upon the Government of Canada, the importance of more perfect regulations for preventing accidents at the crossings on the Intercolonial railway. This year, a kindred subject has been brought forward under the head of "Improved Regulations for Passenger and Freight Service on the River St. John." There is, I am informed, great need for such improvement. Elsewhere, steamers like railways have their freight and passenger stations with wharves or piers at which their traffic can be safely carried on. On the St. John it is the custom to pick up passengers and freight from boats almost wherever these may put out. The boats are not always manned by expert or licensed boatmen. It

may be a convenience to have the conveyance thus brought to the door of each farmer or summer resident. But it may be a question whether, as population and traffic increase, the convenience of the individual should not yield to the need for guarding against danger to human life, and whether some regulations should not be adopted, either as to fixed stopping places or licensed boatmen, which may serve to prevent the accidents which may otherwise occur.

Other subjects of like nature suggested for consideration are: The construction of the electric railway through the Annapolis Valley from Digby or Annapolis to Halifax; daily or more frequent sailings in winter by the steamship line between Digby and St. John; the rate of freight on apples via Halifax, St. John, and United S ates ports, and the more careful handling of freight. Such topics are more than local in their nature. They affect wide districts, even though the whole of the Maritime Provinces may not be concerned. And such prominence as may be given them now will enable the local boards more directly interested to deal with them, feeling that their efforts are better understood, and that they have the sympathy and support of all.

FIRE INSURANCE—STATUTORY CONDITIONS.

Last year, at Truro, the subject of "Statutory Conditions for Fire Insurance Policies" was considered, and I am now able to submit for your consideration a copy of the Act passed by the Nova Scotia Legislature, under which such conditions came into force in that Province on the first day of July last. The object of the Act is to secure uniformity in the fire insurance contract, and this object has, to a very great extent, been secured. There was no opposition on the part of the insurance companies. They would have preferred generally a stricter form of contract as more likely to prevent fraud and entitle the fair insurer to protection at the least possible cost But even this has, to some extent, been attained, through the power given to the companies to add variations to the statutory conditions, subject to the decision of the court as to whether such variations may be reasonable and just.

The extent to which fire insurance enters into the business transactions of the Maritime Provinces may not be generally understood. The premiums received by the companies average a little more than $1,000,000 yearly, or very nearly one-seventh of the premiums paid within the Dominion. They were but $750,000, 15 years ago. The entire fire loss of the last three years in the three Provinces together has been about $4,200,000, or an average of $1,400,000 for each year. Of this amount about $1,800,000, or an average of $600,000 yearly, has been borne by the fire insurance companies, or perhaps, I may say, has, through their means, been distributed in the shape of fire insurance premiums over the community at large.

The expense of conducting such a business over a wide and scattered field is serious, reaching from one-fourth to one-third of the premiums received. The greater part of this expense, however, goes back to the community in the shape of agents' remuneration, rent, taxes, and other charges. It will be seen that, after the losses incurred and these expenses are allowed for, the companies are not receiving a large return for the protection they give. And I need hardly say that the present year is not likely to turn out to their advantage.

The great cause of fire loss is carelessness, carelessness in the construction of buildings, and carelessness in their use. Where this carelessness can be lessened or prevented the loss is at once decreased, and the premiums are proportionately reduced. Steam sawmills built in accordance with the standards furnished by the fire insurance companies can be insured at one-half the old average rate; and for the better classes of hazards the rates are generally lower than in former years. There is no reason to believe that incendiarism is of frequent occurrence. Many fires are, indeed, I believe, set down to an incendiary which are the result of spontaneous combustion, or of some heedlessness on the part of the owner or the occupier of the property, which he cannot bring himself to believe has produced the unfortunate result. The business has become a science, and, in the effort to adjust the rate to suit the risk, the companies are benefiting the community, since they are encouraging safer construction and deprecating the reverse. Greater care taken to prevent loss must not only tend to preserve property, but also to reduce the rates charged for the protection which the companies give.

Every effort was made to obtain copies of the Nova Scotia Fire Insurance Policy Act in time to enable the committees appointed at the last meeting of this board for New Brunswick and Prince Edward Island to bring the subject before the Legislatures of those Provinces if they saw fit. Unfortunately the copies could not be procured and the matter therefore remains open for further consideration on this occasion.

MARINE INSURANCE RATES.

Passing from fire to marine insurance we have an important topic to consider "The Increase in Marine Insurance Rates in Connection with Canadian Atlantic ports."

This increase has come from Great Britain. Canada has held out her hand with the offer of preferential trade, and charges one-fourth less duty on the products of the Mother Country and her colonies than on those of other lands. It seems hard that almost at the same time her harbors should be singled out and discriminated against in favor of foreign ports.

The fact remains, however, that prohibitory clauses have been inserted in the marine insurance policies, and special charges are made when permits are granted for Canadian Atlantic ports.

It may be freely admitted that the last two or three years the business of marine insurance has been unfortunate. But are the circumstances such that the misfortunes should be visited on the Canadian Atlantic ports alone?

The navigation to the Maritime Province ports, at least from Sydney to the United States boundary, is as open as it is to Boston or New York. The usual route across the Atlantic to Portland and Boston is very much the same. The Castilian was lost last winter, not on her passage from St. John or Halifax, but on her way from Portland, Me. Fogs there may be, but they extend from the banks of Newfoundland to Cape Hatteras. Tidal currents have been exaggerated. Probably they occur all along the North Atlantic coast.

Shipwrecks there will be. When the sailor approaches a harbor he must needs approach the headlands which give protection and safety to the vessels anchored within. If heedlessness is shown, if the lead is not used, or the course is not observed, there can be but one result. We may feel deep sympathy for the unfortunate sailor whose vessel has struck the shore. We may leave him to settle the matter even with his employers, but the port should not be blamed, unless, indeed, there be circumstances which render access to it peculiarly difficult and dangerous. Is this the case with any of the principal Maritime Province ports?

This question has been dealt with by the Halifax, North Sydney and St. John Boards of Trade, but so far without success. It seems to be one which calls for united action. If it primarily concerns the shipowners and the seaport towns, it affects also the fair fame of the Maritime Provinces throughout.

MUNICIPAL TAXATION.

Municipal taxation in the Maritime Provinces is another subject suggested for consideration. There may, perhaps, be some feeling of surprise at its mention. And yet it has a vital bearing on their trade relations, their prosperity and their growth.

Upwards of $1,000,000 is levied each year in the Maritime Provinces for local purposes through direct taxation.

It is a serious charge, and yet it cannot be escaped. Each locality must bear its own burden, and distribute it among those whom it can reach.

The distribution should be fair and just. It is unlikely that any system of taxation can ever be devised which will meet with universal approval. But it may at least be expected that the taxation shall be certain and not arbitrary, and that each ratepayer shall contribute to the public revenue in fair proportion to his means; and that it shall be so distributed that trade shall not be unduly hampered, or the wealth which is necessary for its development forced into concealment or driven away.

THE NARROWS, ST. JOHN RIVER, NEAR INDIANTOWN.

In early days a simple plan was very generally pursued. The assessors determined in their minds the amount each ratepayer should contribute, and entered it against his name upon their roll.

But, as local charges increased, it became necessary to introduce some general system under which the individual assessments should be apportioned.

The systems of municipal taxation followed at the present day may be classed under three general heads:

1. In England, the basis of taxation is real estate, the assessment is usually collected, not from the owner, but from the occupier, and, where the occupier is a tenant, is paid by him in addition to his rent.

2. In the United States, each ratepayer is taxed theoretically on the capital value of his real and personal property, and very generally, though not always, upon his income of the past year, derived from his skill or labor, over a certain exempted amount, or, in other words, upon his personal earnings, above a bare living expense, as well. But, inasmuch as, except in the case of those receiving salaries and the artizan and laboring classes, each ratepayer's earnings are very largely within his own

knowledge, and personal property can readily be concealed, the universal result is that those of only moderate means are required to contribute more than their due proportion, and but a small part of the personal property or invested capital is actually reached.

3. A third plan has prevailed from time immemorial in Scotland, and has been adopted, with some modifications, at Montreal. Under this system, the municipal taxation is divided between the owner of real estate and the occupier. At Montreal, the rental paid is taken as the standard of the occupier's ability to contribute. Neither personal property or income is assessed at all; but special charges in the form of license fees are imposed where the circumstances are such that this can be fairly done.

In no part of Great Britain is personal property or income the subject of municipal taxation. An income tax is levied, but for Imperial purposes only. Personal property, as a rule, is not assessed in any form.

In the Maritime Provinces, the system of the United States has been followed, and the burden of municipal taxation is supposed to be distributed between the owners of real and personal property, and generally, also, subject in some cases to living expense exemptions, upon the income or wage earner, in some proportion to their means.

I have endeavored to tabulate the result of the application of this system to 22 of the cities and towns in the Maritime Provinces, returns from which have been kindly furnished by the boards of trade, or procured from local sources. It is, I fear, but a crude attempt, but its imperfections may be pardoned, since it is, I believe, the first comparative statement of the kind that has ever been prepared:

RATIO OF MUNICIPAL TAXATION AND ITS PROPOSED DISTRIBUTION OVER REAL AND PERSONAL PROPERTY AND INCOME IN THE MARITIME PROVINCES, ACCORDING TO THE ASSESSMENT RETURNS.

	Year.	Ratio of Taxation.	Real Estate.	Proportion charged to Pers'l prop.	Income.
St. John, N.B.....	1899	1.55	.50	.35	.15

* The Halifax assessment law provides that stocks of merchandise shall be rated at three-fourths of the actual value, and some other classes of personal property are exempt.

In Nova Scotia, generally, income up to $400 is exempted, and also funds invested in Provincial or municipal debentures, except as to the income derived therefrom.

† At Charlottetown, the ratios for real and personal property differ slightly, and the figures given for the ratio of taxation for Charlottetown and St. Stephen are approximate.

‡ At Moncton, an exemption up to $300 is allowed on all incomes derived from personal earnings.

⅔ At Fredericton, an income exemption up to $300 is allowed, and one-fifth of the supposed value of real and personal estate is taken as the taxable value, against income, over the $300, at the face.

With regard to this table, let me say, first, that the ratios of taxation are, for purposes of comparison, utterly delusive. Real estate is in many cases undervalued, in order that the district may contribute the less to the charges of the larger municipality, of which, for county or township purposes it may form a part; and the ratio is proportionately increased. This is manifestly unjust and unfair. It is unjust to the rest of the municipality and may very likely provoke retaliation of a similar kind. It is unfair to the individual ratepayer, since, if in any case his property is estimated at its full value, he has to contribute more proportionately than others, and is without a remedy. The law contemplates that property shall be put down at its actual value, but it is nowhere said how that value is to be ascertained.

Some principle should be laid down to guide the judgment of the assessors. The best would probably be that all real estate should be valued at the price at which it might reasonably be expected to change hands between a seller and a purchaser, neither of whom was under any special pressure to complete the sale.

But this is not all. The taxation ratio for each town is no test of the burden actually borne. At Halifax it is 1.72 and at St. John 1.55. And, yet, St. John is the more heavily taxed city of the two, since, at Halifax, income, and a large proportion of the personal property, which is subject to assessment in St. John, escapes. Let the incomes taxed in St. John, and the personal property also taxed there, but exempted at Halifax, be taken into account, and it will be found that the ratio at Halifax will fall considerably below that of the sister city.

Fredericton may perhaps claim that it has a low ratio of taxation, because real and personal estate, rated there on one-fifth only of the actual value, pays but 1.22. But what of the incomes so grossly overassessed? Let these be taken into consideration, and the general ratio is at once increased.

If the entire taxation at St. John was transferred to real estate, the ratio would be doubled and become 3.10. If this were done at Halifax, one-fourth only would be added, making it 2.15, while at Fredericton the ratio would become 2.49.

I mention this for two reasons, first, because it is well to be cautious. We are very apt to comfort ourselves under increasing taxation by the thought that we are not so badly off as others And yet we may be

LIVING IN A FOOL'S PARADISE

after all.

But, again, it is an interesting question to what extent the taxation of personal property and income under the American system may shift itself insensibly upon the real estate. Where a high income tax prevails the ratepayer is the less able to give a satisfactory rent. Where personal property is closely followed it is the universal experience that it is driven away. Or, if its possessor remains, he does not care to expose himself to the assessors' grasp by living in an expensive house or indulging in an outlay which may befit his means. We need not go to political economists to be told that it is capital and labor that gives its value to the land. It is the plain teaching of common sense. I am not speaking too strongly when I say that in the city of St. John and elsewhere, where almost every kind of personal property is made subject to taxation, no large holder of such property can, if the assessors do their duty, be expected to reside within the limits of the place. Two-fifths of any income he could reasonably expect from his investments at the present rates of return would be taken from him. And in St. John the rents of the better classes of dwellings have fallen, and of the best some are vacant and others offered for sale at a quarter of their cost.

I am speaking plainly, and I am making use of St. John as an illustration because it is my birthplace and my home. I am not despondent as to the future of my native city. It has overcome many difficulties in the past, and in many ways it is prospering and gaining strength. But this difficulty still remains to be conquered. It is undeniable that, while our trade is extending, our stores are filled with customers and our factories are busily at work, real estate is almost unsalable. There must be a cause.

It will be seen by the table that, outside New Brunswick, income contributes very little to the municipal purse. In Prince Edward Island, and at Halifax and Dartmouth, it is exempt. Over the rest of Nova Scotia the highest ratio is .06, at Amherst, and the average is only about .02 of the general local taxation.

But, in New Brunswick, while the assessors of Moncton and Woodstock may perhaps be wiser in their generation, we find elsewhere a higher income rate. At St. John it is .15 and at Fredericton .27 of the whole taxation in each place.

I know that it has been urged that

INCOME, IN THE WIDEST SENSE

of the word, should be looked to as the basis of taxation, and that each resident of the community should contribute to the public purse in proportion to his annual receipts, from whatever source derived.

At first sight the claim seems plausible. And it was, no doubt, some such idea which led to the peculiar system of fixing the taxable value of real and personal property at one-fifth, as against income at the face, which still prevails at Fredericton, and which was for 50 years the curse of St. John, until it was discarded in 1882. Why should the resident deriving $500 yearly from real or personal property contribute more to the public charges than he who earns annually $500 by his labor or his skill.

For the purposes of the State each contributes very nearly in the same degree. True, even in the State taxation of incomes, there is usually of necessity an exemption up to a certain amount. But the Customs duties, from which the greater part of the State revenues are derived, fall in Canada almost equally upon all. The contribution of each citizen to the State is regulated by the quantity of taxable commodities he may be able to procure and consume.

But there is a vast difference between State and municipal taxation. The subjects with which local administration has to deal are mainly of an economic character. Water supply, sewerage, fire and police protection are instances of this. While each individual in the community partakes of these advantages, it will scarcely be denied that the recipient of a revenue from real estate benefits in a much greater degree than the man who earns his living by his daily toil.

But for the accumulation of property in the town such changes would not be required. The farmer is satisfied with such access to his house as he can himself provide. He lives without fire protection, because his house is not endangered by others around. He draws water from his own well uncontaminated by the drainage from other premises near. In the matter of police he is his own guardian. There is no accumulation of wealth to tempt the thief against whose depredations the city has to guard. He is thus enabled to live at a comparatively small expense so far as contribution to the public welfare is concerned. But in the city it is different. The interest on the public debt contracted in the endeavor to make property of all kinds safer and more valuable has to be met. The various municipal charges put together would make life unbearable if the income idea in all its fullness was carried out. The wage-earner would toil very largely for the benefit of the property owner. All experience has shown that such a system of municipal taxation is unreasonable and unjust.

I cannot speak of the practical effects at Fredericton of the system there in force, but I well remember what took place when it was the law in St. John. The assessors, men who were supposed to be conscientious in the ordinary vocations of life, put the incomes of the working classes at $140 or $160. —one-half or one-third of what it must cost any family to exist in city life. Even when the ratio of taxation was so high that the greater portion of the taxes levied on such classes of citizens went unpaid, and were reassessed year after year to meet only with a similar fate.

The income exemption up to $300 may lessen the difficulty at Fredericton, but it cannot remove it. Inequalities cannot but prevail. Those receiving fixed salaries will, if the assessors do their duty, be taxed beyond the $300, up to the full amount. Others, whose earnings are unknown, will be passed over, although they may be much better able to pay. The ratepayer taxed on his actual income finds himself paying a share of his neighbor's taxes with his own. He has no remedy. He himself is taxed according to the law. He cannot enter on a crusade against others who are not.

It is the same at St. John, and, perhaps, as there is no $300 or other exemption, the difficulty is even more generally felt. The assessors

CANNOT POSSIBLY DETERMINE THE EXACT INCOMES

of ratepayers, except where there is a salary, or someone is conscientious enough to furnish a statement himself. To fix them correctly would require a range of vision more than mortal. There is no provision for compulsory statements except in the case of the employe or the clerk. There would be a rebellion if there was. Year after year, the lists are printed, and, year after year, it is seen that they are largely farcical, and, while income generally is supposed to be assessed, a considerable proportion of that best able to contribute escapes.

For, in St. John, the artizan and laboring classes are very generally reached by the assessors now, but with what result? Owing to the incidence of a fixed poll tax, such ratepayers are required to contribute amounts very nearly, or quite, equalling a full week's wages, while the larger incomes pay proportionately less. And the consequence is that a large proportion of their taxation is not paid at all. No ratepayer can vote at the civic elections in

April unless his taxes have been paid. And, year after year, of the thousands of electors qualifying on incomes of $300 or other small amounts, two-fifths are disqualified and debarred from voting on this account.

There is another difficulty in connection with income taxation. The large class of civil servants, judges, Customs house and post office officials and others, the employes of the Dominion Government, claim exemption from any such assessment. They enjoy the municipal privileges equally with others. They contribute nothing from their incomes to the common fund.

A singular diversity prevails in the taxation of the fire insurance companies. At Halifax and Charlottetown, license fees are paid. At St. John, the companies are asssesed on their net earnings within the county, which very often means that they transact their business without paying anything at all. At Fredericton, as the application of the 20 per cent. system would have led to a large increase in the rates charged, the companies are taxed only on one-fifth of their incomes, or on the same basis as real and personal estate. Over the greater part of Nova Scotia, where an idea, not unreasonable if it was only generally applied, prevails that special businesses should contribute beyond their ordinary income assessment towards municipal charges, the insurance companies with the banks are singled out and called on to pay on five times their incomes, while others are taken at their face. The result is constant injustice. The assessors guess at the incomes received. The companies grade their rates in proportion, and so well is this understood that in only two or three cases are the increased rates accepted and the law carried out. In half a dozen more such incomes are put at amounts which result in their contributing equally with others. In the majority of instances they are not assessed at all.

If the table is again referred to, it will be seen that about

ONE-THIRD OF THE MUNICIPAL ASSESSMENT

in the Maritime Provinces falls on personal property. Here the ratio is less uneven. In no city or municipality does personal property altogether escape. The ratio ranges from .18, .19 and .20 at Pictou, Sydney, Kentville and Halifax, to .35 at St. John, .38 at Lunenburg, and .40 at Yarmouth.

I have already spoken of the effect of this pressure upon capital in forcing it into concealment or driving it away. In Nova Scotia this is partly obviated by the exemption given to funds invested in Provincial or Municipal debentures. There, too, ships and vessels of every kind are assessed only at half their value. In St. John, all such personal property is supposed to be chargeable at the face, with the result that the assessors fail to discover one-half of the invested funds, and the taxes of those who escape are borne by the owners who are reached and by the real estate. The Probate Court reveals the actual condition of affairs and then the widow and the orphan must be followed, and those who are the least able to contribute are required to pay the most.

Yet, further, when a large vessel is to be built, a joint stock company is formed with its headquarters in some neighboring village. The vessel may be managed at St. John, but, as the company has its office elsewhere, a considerable proportion of taxation is escaped. There is a fine line of steamships connected with the port; a line that does credit to the enterprise of its owners, who are steadily adding to their fleet. Upwards of $1,000,000 have already been thus invested, and soon the amount will reach $2,000,000 or more. But look at one of these vessels and you will fail to realize from what port she hails. You will see, it may be Liverpool, but not St. John, N.B., painted after her name.

It must not be supposed that such difficulties are felt in the Maritime Provinces alone. They exist in the United States as well, and are borne with only because the assessors fail generally to carry out the law, and a small proportion only of the personal property is actually assessed. Dr. Richard T. Ely, one of the highest authorities on municipal taxation, comments on them strongly. He declares that the system leads everywhere to oppression and to fraud.

But there is a still more important consideration in connection with the taxation of personal property. The system is endangering the growth, and even the existence, of the wholesale trade. At Halifax, stocks or merchandise are rated at three-fourths only of their actual value, but, at St. John and elsewhere, they are supposed to be taken at the face. It is hardly too much to say that, if the law was strictly carried out, most of the wholesale establishments within the Maritime Provinces would be closed.

Montreal, and even Toronto, are sharp competitors for this wholesale trade. At Montreal, where the Scottish system of municipal taxation prevails, wholesale stocks escape taxation. The merchant is assessed, but it is on his rental as an occupier, and, in proportion, not to the stock he may have to carry, but to the premises he occupies, which are taken as an index to the extent of the business he transacts. And at Toronto the assessors fail to discover the greater part of the personal estate at all. A few years ago, when Mr. T. W. Anglin's report on municipal taxation was published, the whole valuation of personal property at Toronto was but little more than at St. John, while the population was nearly five times as great.

There is a difference in the way in which various trades are carried on. In some a large stock has to be kept. In others it is the reverse. Samples, to a certain extent at least, suffice, and yet, perhaps, a large business is actually being done.

If the assessment laws, as they exist, are strictly carried into effect, it is plain that

THE WHOLESALE MERCHANT IN ST. JOHN

must be at a disadvantage as regards Halifax, and both when they come into competition with Montreal. The competition is keen, and prices are finely drawn. A few thousand dollars of municipal taxation may make the difference, and send the merchant in the Maritime Provinces to the wall.

Mr. Palgrave, in his work on "The Local Taxation of Great Britain and Ireland," points out what was the effect of a similar system in a part of England where it once prevailed. He says: "The practice of rating stock-in-trade never prevailed in the greater part of England and Wales. It was, with comparatively few exceptions, confined to the old clothing district in the south and west of England. It gained ground just as the stock of the wool staplers and clothiers increased, so as to make it an object with the farmers and other ratepayers, who still constitute a majority in their parishes, to bring so considerable a property within the rate. They succeeded by degrees, and, when the principle of rating stock-in-trade was fully established in this district, the ancient staple trade rapidly declined there, and withdrew itself still more rapidly into the northern clothing districts, where no such burden was ever cast upon the trade."

It must, I think, be admitted that the present system of municipal taxation in the Maritime Provinces has

FEATURES WHICH CALL FOR VERY SERIOUS THOUGHT.

The laws are such that they cannot and will not be enforced. Such laws are in themselves injurious. They blunt the conscience. And, while I believe that many of the assessors are anxious to do right, it is only on the theory of a blunted conscience that the doings of others can be explained.

But it will be no easy task to substitute a better. A considerable proportion of the ratepayers believe that they escape under the present law better than their neighbors. It is easy to work upon the dread of change and to conjure up imaginary evils in connection with any plan that may be proposed. The present system may be bad. It may be felt to be worse as municipal charges increase. But the ratepayer has become accustomed to it, and, while many complain, it is as individuals only, and not in the belief that the system itself is at fault.

The Englishman has become as much accustomed to the plan which casts the municipal burden upon land and house property as the Canadian has to the higher prices which Customs duties entail. The taxes are paid by the owner, or by the occupier in the case of a rented house. He takes it as a matter of course. It would be very different here.

Some modification of the Scottish system might, however, be well worthy of consideration. It is working satisfactorily at Montreal. The real estate would continue to be taxed as now. It need pay nothing more nor less. The taxation now levied upon residents or occupiers—and, it must be remembered, these only can be reached in proportion to the supposed capital value of their personal property or to the incomes they may earn—would be paid by the same persons, but in proportion to the rental paid or estimated for the business premises and the dwellings occupied by each. A comparatively sure basis would be substituted for one that is utterly uncertain. Civil servants and all other classes in the community would be reached. It would be right and proper to exempt the lesser rentals on the same principle that the living expense is deducted where income is assessed, on the principle that the larger share of the municipal charges should be borne by those best able to pay them. To meet such cases, a fixed poll tax might be levied. In view of the actual cost of living, $3 yearly is, perhaps, as much as the ordinary wage-earner, with an income of but $300 or $400, can be fairly expected to pay.

And the taxation could be further distributed, as is done at Montreal, through a system of business licenses, charged for generally whenever the ad-

ABOVE THE FALLS, ST. JOHN.

vantages afforded through the municipal privileges warranted their being required, and not imposed only in some special cases, as is the usual practice now.

And now I must pass from this subject of municipal taxation on which, perhaps, I have dwelt too long. But I hope I have convinced you that the subject is one well worthy of consideration. If the effect of the present system is that the bone and sinew of the country is oppressed; if the person deriving an income from Dominion sources escapes his fair share of the municipal burden; if trade is hampered; if manufacturing is discouraged for want of capital; if the capitalist conceals his wealth; if he fears to embark in the development of industries at home, and even removes to a foreign land; if there is injustice everywhere; then, indeed, it is time that that system was thoroughly weighed, and such changes as may be required pressed upon the notice of those through whom the necessary legislation can be obtained.

REMAINING SUBJECTS.

Other subjects, such as tourist travel, immigration, trade with the West Indies, rates of freight, electric railways, the deve opment of iron and steel industries, the school curriculum, and our copper currency, will be explained to you by the gentlemen who have suggested them for consideration. There is a full bill of fare. I have, I fear, delayed you too long already, and cannot venture to touch upon them now.

WE HAVE A COMMON END IN VIEW,

the development of the Maritime Provinces of Canada in which we have our home. It is not, I think, altogether a selfish one, although we all hope, and we may legitimately hope, to gain as the general interests advance. The boards of trade ask for no financial help outside themselves. If their members give their time to the consideration of public questions, it is done without charge. If they gather information, or even venture to send delegations where personal contact with the central authority may be required, it is at their own expense. The great principle which underlies this Maritime Board is that the Maritime Provinces can prosper only with the growth of each of the parts of which they are composed. I have pointed out some of the advantages we possess. I have ventured to speak of what seem to me to be stumbling blocks in the path of future progress. If I have done so, it is only with the hope that the existence of those hindrances, if such they be, may be considered, and such steps taken that in course of time they may be removed I am no advocate for the mere selfish accumulation of wealth. But, for the progress of the community, capital is an absolute necessity. Of the three great requisites of production we have the land in abundance. It is in many parts of these Provinces a fertile land, and it is a land, too, which teems with mineral wealth. We have our rivers, giving a ready access to the interior. We have commodious harbors on our coasts. If we are to have the labor and the capital through which only our natural resources can be developed, we must encourage them to continue with us, and be very watchful of whatever may tend to drive them away. We must not give way to the feelings that our advantages exist only for those who may now be resident among us. We must endeavor to encourage immigration of the kind we need. We should join hand in hand, not merely in advancing such interests as we may have in common, but in helping each other as occasion may arise.

A GREAT IMPRESSION.

The address created a great impression, and unusually vigorous applause greeted the President as he took his seat.

When the applause had subsided the President again arose, remarking as he did so: "I am afraid I have detained you too long. I presume you do not intend to take up any business to-night."

It was after 10 o'clock, but the members refused to adjourn until they had, in words as well as in applause, expressed their approval of the president's address.

"I would like," remarked Mr. John Ervin, of Bridgetown, "to move a vote of thanks to the president for the very excellent address which he has given us. I am sorry we had not even a larger representation from the various boards of trade in the Province to listen to the address, particularly in regard to the progress of the Maritime Provinces, and I would suggest that means be taken to have the address printed and distributed throughout the Provinces."

Mr. M. G. De Wolfe, Kentville: "I have very much pleasure in seconding the motion. The president must have devoted a great deal of time to the preparation of his address. If the same matter had been gotten up at Ottawa it would have cost the country $3,000 or $4,000. I am sure if it is printed and circulated throughout the Provinces it cannot but fail to create a great deal of enthusiasm. "I am told at home," he added, "that when I start talking it is necessary for someone to give me a cue when to stop."

"Here's a cue," interposed a facetious delegate, as he handed Mr. De Wolfe a blackthorn of Irish production. Everyone laughed, and amid it, Mr. De Wolfe took his seat.

Mr. H. Hazzard, Charlottetown, vice-president of the board, in putting the motion, said he was sure the address had been a source of great pleasure to everyone present.

The motion was carried unanimously, and Mr. Jarvis briefly and fittingly replied.

President J. J. McLaughlin, of the local board of trade, invited the delegates to a sail up the St. John river on Thursday afternoon. The invitation was cordially accepted, and the meeting adjourned.

THURSDAY'S SESSION.

It was 10.30 o'clock when the president opened the meeting on Thursday morning, and as he did so he announced that Mr. D. G. Smith, of Chatham, had kindly consented to assist the secretary in his work.

The President: "The next order of business is the receiving of the reports of committees. I will ask the committee on business, appointed last night, to report."

Mr. J. E. De Wolfe, Halifax: "The secretary has the report, but I might say, on behalf of the committee, that we find, in regard to some of the subjects left over from last year for discussion, that there is no one here to introduce them."

Secretary Allison then read the report on subjects, which was as follows, in order named:

1. Preferential trade within the Empire.
2. The increase in marine insurance rates in connection with Canadian Atlantic ports.
3. Improved telegraphic communication between Prince Edward Island and the mainland.
4. Rates of freight on apples via Halifax, St. John, and United States ports.
5. The construction of a line of railway from Victoria beach to Middleton, to connect with the Nova Scotia Central, and thence via New Germany to Halifax.
6. The construction of an electric railway through the Annapolis Valley, from Digby or Annapolis to Halifax.
7. The lobster industry. What can we do to protect it?
8. Development of Canadian trade with the West Indian Islands.
9. Is the curriculum of our public schools and county academies the best that can be devised to fit our young people properly for industrial and commercial pursuits, and thus promote our national advancement?
10. What can be done to attract desirable classes of immigrants to the Maritime Provinces?
11. Daily mail service between Digby and St. John throughout the year.
12. Municipal taxation in the Maritime Provinces.
13. Better system of packing and branding apples.
14. Tourist travel, and the development of accommodation for summer visitors and the best means of inducing them to visit points of interest.
15. Shorter terms of credit.
16. Statutory conditions for fire insurance policies.
17. Development of iron and steel industry.
18. Improved regulations for passenger and freight on the St. John river.
19. Canadian copyright law.
20. Law affecting weight of goods, canned or in packages.
21. Atlantic mail service on basis of speed.
22. The securing of more careful handling of freight on the St. John and Digby route.
23. Legislative union of the Maritime Provinces.

On motion of Mr. J. E. DeWolfe, the report was received and adopted.

THE NEW OFFICERS.

The report of the committee on nominations for the respective officers of the board was presented and read, as follows:

President—M. G. De Wolfe, Kentville, N.S.

Vice-Presidents—D. J. McLaughlin, St. John, and W. H. Aitkin, Charlottetown.

Secretary-Treasurer—Geo. E. Calkin, Kentville, N.S.

The report, on motion of Mr. John Ervin, was received and adopted.

President Jarvis: "Will Mr. De Wolfe now kindly take the chair. I am glad you have elected as your president a gentleman who has always shown such a live interest in matters appertaining to the Maritime Board of Trade."

President-elect De Wolfe slowly wended his way to the platform. "Gentlemen of the Board," he remarked, as he stood in the presiding officer's place, "I have a request to make, and that is that the retiring president be allowed to preside until the close of this session. He has everything under his thumb, and to allow him to remain will, therefore, facilitate business."

Mr. Jarvis: "With all due deference to Mr. De Wolfe, I do not think that what he has suggested is exactly the proper thing. The subjects for discussion are all here, and it is simply the chairman's duty to call them off in their order. I will, however, take a seat on the platform, if you like."

Mr. De Wolfe accepted both the inevitable and Mr. Jarvis' offer to sit at his elbow, and spoke in part as follows: "You have placed me in a very responsible position. In electing me, you have called upon me to follow an 'old stager,' while I am new at

the duties appertaining to the office. I shall have a great deal to do in order to keep up with the work, and I shall not be able to keep up with it without your assistance. You are really the men to say whether the work of the board shall be carried on. Words can hardly express my feelings. I consider that the honor you have placed upon me is even a greater honor than to be Governor-General of Canada." (Laughter and applause.)

Mr. J. O. Allison wanted, also, to be relieved of his duties as secretary. "Mr. President," he said, "when the new secretary was elected my duties ceased. I would now like to have him called to take my place."

President De Wolfe: "I am in command now, and shall not allow it." (Laughter.) "Mr. Calkin may, however, come upon the platform and assist you."

Mr. Calkin, accordingly, came to the platform.

Then, upon motion of Mr. C. M. Creed, a hearty vote of thanks was tendered retiring Secretary Allison, while, upon motion of Messrs. Hazzard and Carmichael, the usual stipend of $50 was also awarded him. The movers of both these motions warmly eulogized Mr. Allison for the ability with which he had fulfilled his office.

QUESTION OF PERMANENT SECRETARY.

Mr. A. I. Teed, St. Stephen, N.B., ventured the information that at the meeting of the nominating committee the matter of appointing a permanent secretary-treasurer had been considered. "I give notice of motion to that effect," he concluded.

Mr. C. M. Creed: "I have learned from experience that it will not work. The secretary must be where the president is."

When the subject promised to become a matter for discussion the President pointed out that notices of motion could not be discussed.

On motion of Mr. W. M. Jarvis, Messrs. Calkin and Fisher were appointed auditors.

When the morning session opened, Mr. W. S. Fisher appeared with a basket of sweet peas and carnations, which had been kindly sent to the hall by Mrs. Fisher, and soon every delegate was wearing a handsome bouquet of one or other of the two kinds of flowers. When votes of thanks were going around, Mr. Alex. Henderson, of Woodstock, thought it would he a good idea also to move one to Mrs. Fisher for the bouquets, but Mr. Fisher, who thought the vote was for himself, raised his hands before the chairman in protest.

"Oh! you go away," shouted several members. "It is for Mrs. Fisher."

"Oh!" ejaculated Mr. Fisher as he stole away.

Mr. Ervin gave notice of motion to the effect that he would move an amendment to Article 8 of the constitution. This Article dealt with the per capita tax. His object was to make the per capita tax 10c. per member instead of 15c.

Mr. Schofield: "Before we go on with further business, I desire to make some remarks in regard to a motion made last night relating to President Jarvis' address. I think this board should print an annual report. Such a report would be a permanent and interesting record. I would move that when the committee is considering the matter of printing the president's address, that it also consider the question of printing an annual report."

Mr. Hazzard suggested that the constitution and by-laws should also be embodied in an annual report.

Mr. D. G. Smith declared he had much pleasure in seconding Mr. Schofield's resolution.

The President thought the board could scarcely afford to print an annual report.

The motion was adopted.

Mr. Jarvis extended the hospitality of the Union Club to the delegates.

Upon the suggestion of Mr. Jarvis, consideration of the first subject for discussion, "Preferential Trade," was adjourned until Friday, owing to the absence of Mr. Robertson, M.P., who was to introduce it.

MARINE INSURANCE RATES.

The next subject on the order list was the "Discrimination of Marine Insurance Rates against Canadian Atlantic Ports in favor of United States Ports." The subject was introduced by Mr. J. E. De Wolfe, Halifax, who moved the resolution deprecating the fact.

"What I object to," said Mr. De Wolfe, "is the excessive insurance rates charged against Canadian Atlantic ports in favor of United States Atlantic ports and of the St. Lawrence. I think the excess is about 25 per cent. Instead of being charged higher rates, we should be charged less, or, at least, no more."

A VIEW IN THE HARBOR OF ST. JOHN, N.B.

Mr. W. M. Jarvis seconded the resolution, and, in doing so, said there was a very mixed idea in Great Britain in regard to Canada. He was afraid whether this was not the reason why the rates discriminated against the Maritime Provinces. What he would like to know was whether the Maritime Provinces were compelled to share in the losses incurred on risks in other parts of the Dominion? He was rather of opinion that they did. It would be well to try and find out.

Mr. J. E. De Wolfe: "I don't know whether you know it or not, but the loss of

the Labrador on the coast of Great Britain was really charged against Canada.

Mr. Jarvis (continuing): "We shall find it very difficult to get the desired information. Lloyds should have the necessary statistics. Get the statistics showing what the losses have been on the St. Lawrence route, the Maritime Provinces and at United States ports. In this way, the facts will be learned. Then, if it is found that the losses are relatively higher in the Maritime Provinces, let us accept the results."

Mr. S. Schofield said that the mover and seconder of the motion had not shown them the discrimination. "Is it against the hulls or their cargoes?" he asked. He did not believe the underwriters at Lloyds, who were experienced men, would discriminate against any port. "I am of opinion that if we could get at individual underwriters we would find that in advancing our rates they were guided by actual experience." He asked whether at Halifax provision was made against ships putting to sea with excessive deck loads? In Montreal there was. "I regret this check does not exist at the port of St. John, and I do not think it exists at the port of Halifax. It has been stated that this was one of the reasons for the increase of marine insurance rates on steamers running to the Maritime Provinces. It was stated so at Ottawa." Until more facts were advanced he thought it would be unwise to appeal to Lloyds.

Mr. J. M. Carmichael, New Glasgow, who is a steamship owner, did not like the wording of the resolution. It was too arbitrary. He claimed, however, that there was a discrimination against the Maritime Provinces. In his opinion, what the marine underwriters were trying to get at, was the St. Lawrence route, which, he claimed, was more dangerous than that to the Maritime Provinces. "Lloyds have reason for the faith that is in them, but they are ignorant in some respects in regard to Canada. The trouble is that they group the different parts of Canada together. What they should do is to separate the St. Lawrence route from the Maritime Province group. I think we should pass a resolution of some kind in regard to this matter. I am sure our rates are higher from Maritime Province routes than from United States ports. I am not, however, so sure about the rates for the St. Lawrence route. I know this, that in using my steamer I was notified to exclude the St. Lawrence route. It is unfair that we should pay higher rates than vessels sailing from United States Atlantic ports. Vessels sailing from St. John, Halifax and other Atlantic ports are just as sure as those running from ports in the United States."

Mr. S. Schofield said that steamers from Boston and Portland did not carry deck loads. "Ours do," he said, "and this may be the cause of the higher rates. Then, again, there is the question in regard to the class of steamers."

Mr. Cochrane: "I do not think it can be due to the class of steamers, for some of the steamers which run out of United States Atlantic ports are of the very poorest class. Then, as to deck loads, there is no more comfortable or more safe steamer to cross the Atlantic than a steamer with a 10-foot deckload of lumber. I would rather cross the Atlantic on a poor steamer loaded with lumber than on one of the fastest loaded with grain. If there is a master in the room, he will tell you the same thing. In going to Lloyds, you must be able to present a reasonable case, or they will laugh at you."

Mr. W. S. Fisher said he quite agreed with Mr. Cochrane that caution should be used in approaching Lloyds. He said that when in London, England, according to instructions received from the St. John Board of Trade, he had tried hard to get at the bottom of the marine insurance rate question. At Lloyds, they claimed there was no discrimination against Maritime Province routes, or, at least, no intended discrimination. The rates, they said, were based upon the best information obtainable. "But I found," he explained, "that there was a very great difference of opinion in regard to the matter. It seems to me that all that is necessary, in order to convince Lloyds of the legitimate character of our case, is united action on the part of the merchants and vesselowners in the different parts of the Maritime Provinces."

Mr. D.G. Smith, Chatham, N.B.: "Would it not be well for this board to collect statistics showing the losses on the different Canadian-Atlantic routes, I think that at present we have not sufficient information to deal intelligently with the matter." He moved the following resolution:

That the subject of marine insurance be referred to a committee of five, who are requested to prepare a paper to be presented to the British underwriters giving reasons why discrimination should not be made by them against risks in the trade from the Maritime Provinces, such paper to include statistics of casualties happening to vessels running between the Maritime Provinces as distinct from other ports and trans-Atlantic points, as well as other relative information, the paper to be forwarded by the president and secretary of this board to the British underwriters.

Mr. De Wolfe thereupon withdrew his resolution.

Mr. H. Hazzard, Charlottetown, P.E.I., who is in the underwriting business, explained that he had read the resolution passed by Lloyds increasing the rate of insurance, and it was therein stated that the reason for doing so was the excessive deck loads carried, some of these deck loads being 14 ft. He explained that in Prince Edward Island, where they did not ship lumber, the rates were now about 3½ per cent., where they were some years ago as high as 9 per cent.

Mr. Carmichael said that he knew steamers had gone out with excessive deck loads. "I have no doubt the underwriters have grievances, and they always will find some cause for complaint."

Mr. Schofield said that only that day the newspapers reported that a St. John vessel had been fined £50 in London, England, because of an excessive deck load.

Mr. Carmichael: "I happen to know something about that case. The fine was imposed because the vessel was immersed below the Plimsoll line."

Mr. Smith's motion was adopted, and these were appointed a committee to carry out its provisions: W. M. Jarvis, St. John; J. M. Carmichael, New Glasgow; S. Schofield, St. John; J. E. DeWolfe, Halifax; H. H. Hazzard, Charlottetown; H. Dobson, North Sydney.

The convention adjourned at 1 p.m. to meet on the following morning.

FRIDAY'S SESSION.

The convention resumed on Friday morning at 9.35 o'clock, with President De Wolfe in the chair.

A communication was read from the Truro, N.S., Board of Trade, regretting inability to send delegates to the convention of the Maritime Board. "We appointed," read the letter, "eight delegates and eight substitutes, but some unfortunate circumstances have prevented anyone from going. We have not, however, lost interest in the Maritime Board."

The first subject for discussion was

IMPROVED TELEGRAPHIC COMMUNICATION WITH P.E.I.

Mr. H. Hazzard, president of the Charlottetown, P.E.I., Board of Trade, introduced the subject. He said that The Anglo-American Telegraph Co., which had had a monopoly since 1855 and received a subsidy from the Dominion Government of $2,000 per year, did not act square with the public. What he complained about was, that the offices were closed after 8 o'clock at night until 9 o'clock next morning. And not only that, but the rates were excessive. For instance, if he desired to telegraph to Boston, it cost him $1, twice as much as paid by the other Provinces for a similar message. They did not, however, claim that they should have as low a rate as the other Provinces. They would not object, he thought, if they had to pay two-thirds more. What he desired was the cooperation of the Maritime Board.

Hon. Mr. Davis, he explained had taken the matter up, and promised to do all he could in regard to the matter.

Mr. Schofield wanted to know if there

were no provisions in the charter of the company whereby it could be compelled to improve the service ?

Mr. Hazzard said there was, and it was under this clause that he thought steps could be taken in order to get the desired improved service.

Mr. Jarvis : "Does the company publish an annual statement showing what dividends are paid ? I think the Government should expect it to do so."

Mr. Hazzard : "It does not, and the company claims that it does not do so, as it cannot afford to do so. We have this season two steamers weekly from Boston and a great many tourists coming in. These tourists cannot understand how it is that from 8 o'clock at night until 9 o'clock the following morning, the offices are closed."

Mr. Schofield thought it was only to be expected that, with the cable, higher rates would be paid by the people of Prince Edward Island than paid by the other Provinces. "At the same time they have an unquestionable right to have the office open until 12 o'clock." He moved that the matter be referred to a committee of three, said committee to be appointed by the president.

Mr. F. L. Potts seconded the resolution, which was carried, and the president named the following as a committee to deal with the matter : Messrs. H. Hazzard, J. E. De Wolfe, and S. Schofield.

RATES OF FREIGHT ON APPLES VIA HALIFAX, ST. JOHN AND UNITED STATES PORTS.

The subject was introduced by Mr. P. Innes, Cold Brook, King's Co., N.S. He said the question was a double-barreled one, as it dealt (1) with the railway, (2) with the steamship subsidy.

In speaking on this subject, and I do so as Vice-President of the Nova Scotia Fruit Growers Association ; I would like first to draw your attention to the great development of the apple business in the western counties of Nova Scotia, especially in Kings and Annapolis counties. It has grown in the last quarter of a century from small beginnings until it has become one of the great staple industries of the Province. The product of a favorable year is now half a million barrels, and with large areas of young orchards coming continuously into bearing, the time is not distant when this product will have doubled. In fact, what the wheat crop is to Manitoba and the Northwest the apple crop is to Nova Scotia. The industry is therefore not merely of local, but of Provincial importance, and accordingly the profitable marketing of the crop is of great moment, primarily to the producer and shipper and incidentally to the country at large.

Now, gentlemen, please consider in the first place the conditions—the physical and geographical conditions—with which we have to deal. The great fruit belt of Nova Scotia lies within an average distance of 80 or 90 miles from the Atlantic seaboard at Halifax. The port of Halifax is accessible all the year around, is nearer, speaking roundly, by some 500 miles to our market in Great Britain than the ports of Portland, Boston and New York.

The railway which traverses the fruit belt, and has a monopoly of the business, is one of the most heavily subsidized and highly favored in the Dominion, and the steamships plying between Halifax and Great Britain are also in receipt of a Government subsidy. Under these exceptionally favorable circumstances, you would imagine, and you would be justified in imagining, that we should be able to market our apples on better terms, or at the very least, on equal terms with our competitors in Canada and the United States.

How stands the fact? I can answer in a sentence: Canadian apples are carried over 600 miles by rail and 300 miles farther by sea at a through rate of 83.47c. (3s. 6d.) per barrel, while Nova Scotian apples are carried an average of 85 miles by rail and 300 miles less by sea at a through rate of 90c. (3s. 9d.) per barrel, and this is not all. The Canadian and American barrel is about one-tenth larger than the Nova Scotian barrel, so that in reality the comparison is 83.47c. as against 99c. per barrel. This is equivalent to a discrimination of 15½c. per barrel against the Nova Scotian shipper, notwithstanding that he is 800 miles nearer the market. In other words, in placing 300,000 barrels of apples, last year's crop, on the English market, Nova Scotian shippers were at a disadvantage in respect to transportation charges to the extent of some $40,000 as compared with their Canadian and American competitors.

RAILWAY CHARGES.

I have stated that this great apple industry has grown and developed in the last 25 years, but the Dominion Atlantic railway has failed to recognize the altered circumstances, and their apple tariff of to-day is, with some trifling modification, the apple tariff which was in force 25 years ago, when the crop was insignificant, but little of it moved by rail, prices ruled high, and apples were considered an expensive luxury. To illustrate: Apples are carried in trainloads at no expense to the company for loading or unloading at a rate of at least 2½c. per ton per mile. A trainload of 2,500 barrels carried 83 miles would be charged $387.50, while a trainload of ore of equal weight would be carried 85 miles for $160. Again, a carload of apples worth $150, more or less, would be charged $27.50 if carried 100 miles, but a carload of flour worth, say, $450, the product of another Province, would only be charged $21 for the same distance.

It is a well-known and fundamental principle in railway practice that the determining factors of a tariff are the volume and the value of the commodity carried. The more valuable the commodity, the higher the rate ; the larger the volume carried, the lower the rate. Apply these principles to the D.A.R. tariff in the matter of apples and flour. A barrel of flour is double the value of a barrel of apples, and the volume of the former that is carried on the D.A.R. is almost infinitesimal as compared with the latter. Therefore, on both grounds, the apple rate should be very much lower than the flour rate. True, the railway company contend that their rates on apples compare favorably with those charged on other railways. I think I have shown by the through rates charged as far West as Toronto that this is not the case ; but, further, there are only a few districts in this great Dominion where the soil and climatic conditions are favorable to the growing of apples. In the Cornwallis and Annapolis Valleys we have one of the best districts. There the apple crop has become the great staple industry, numbering hundreds of thousands of barrels, that have to be transported by trainloads. Yet, all this volume of business is classified, and charged as high rates as in those sections of the country where apples are not grown, and are considered a luxury.

The apple crop of our district should receive as fair treatment as the grain-producing sections, or the coal, iron, and lumbering industries of the country. Secure in its monopoly, no redress can be obtained or expected from the railway company. It is, therefore, submitted that the proper and effectual remedy, not merely in our case, but as applicable to the whole question of transportation in the Dominion, lies in the appointment of a permanent commission, with powers and authority somewhat similar to those of the English Railway Commission, or the United States Interstate Commerce Commission, which would fix reasonable rates and grant just redress on the application of individuals or localities having ground for complaint.

Accordingly, the interest and aid of the Maritime Board of Trade is earnestly solicited towards the appointment of such a commission at an early date.

STEAMSHIP CHARGES.

The excessive charges on the railway are only a part of the grievances of which we have to complain. The rates charged on the steamers from Halifax are equally excessive. Notwithstanding that the steamers are in receipt of a Government subsidy, while those from the Atlantic ports—Portland, Boston, and New York—are not so favored, the rate from Halifax has remained steady for some years past at 3s. per barrel, while the rate from the other ports last season was as low as 1s. 6d. and 5 per cent. primage, and was never higher than 2s. 3d. and 2s. 6d. per barrel. Further, the amalgamation of two lines formerly running from Halifax has deprived us of competition, and the granting of rebates to middlemen enables them, when so minded, to secure the entire steamer's space, and forces the producer into the middleman's hands, if he is to get his apples to market at all. Consequently, several producers have had to send their apples either by schooner, or via Yarmouth to Boston and thence to London. In fact, a saving in the rate could be effected by shipping from Middleton and stations west via Yarmouth, some 300 miles to Boston, and thence by the Johnston line of steamers to London.

The steamers' charge for deals varies from 33s. to 45s. a standard, according to dimensions, but the charge for 28 barrels of apples, which would occupy the same space, is no less than 84s., which would appear to be an extreme discrimination.

We are of the opinion that competition would be induced and our position improved if the subsidies were withdrawn from these steamers altogether, and the Kings County Board of Trade, the Kentville Board of Trade, and the Municipal Council of Kings have asked the Government accordingly, and until such time as the subsidies are abolished, that the Government exercise supervision and control over the rates charged so that they shall not exceed the corresponding rates from competing Atlantic ports, and, further, that the Government appoint inspectors to superintend the loading of steamers, and see as to their ventilation and general suitability for carrying the freight offering.

Mr. Innes read the following resolution :

Resolved, that the Maritime Board of Trade ask the Dominion Government to appoint a permanent railway commission with powers and authority somewhat similar to those of the English Railway Commission or the United States Interstate Commerce Commission, which would fix reasonable rates and grant just redress on the application of individuals or localities having grounds of complaint.

Mr. John Ervin seconded the motion, and, in doing so, said they insisted that the great apple industry must not be handicapped by adverse freight rates. "In addition to the high freight the farmer has to pay, there is another item of cost which has not been referred to at this meeting. A great many of these apples are shipped in the winter time, and, as we have no frostproof cars, the farmers have to put charcoal fires in the cars and also send men to attend to them. This means an additional cost of 5 or 6c. per barrel."

Mr. Schofield said that the Dominion Atlantic railway should not be dealt with too harshly in the matter. It was a struggling line and should be encouraged.

Mr. Innes : "I do not think there is much difference between Mr. Schofield and myself in regard to this question. The apple-growers claim that their rates are excessive ; the railway claims that they are not. Now, what we want is a neutral board, who shall determine whether they are or not. I might say that the Dominion Atlantic railway is in favor of the appointment of a commission, Mr. Griffin, the secretary of the road, having seconded a resolution to that effect adopted by the Halifax Board of Trade."

Mr. D. J. McLaughlin, St. John, thought the question was one which the Maritime Board of Trade should take no action in, and, at any rate, without representatives of the railways being present, so that their side of the case might be stated.

Mr. J. E. DeWolfe did not agree with the previous speaker, and corroborated what Mr. Innes had stated regarding the action of the superintendent of the Dominion Atlantic railway in supporting the Halifax motion.

Mr. T. H. Estabrooks said that as far as he understood the resolution, the question at issue was not a Provincial one, but a Dominion one, as it called for a railway commission to regulate all the railways in Canada. However, as far as he was concerned, he hardly knew which side he was on in regard to the matter.

Mr. F. E. Cox said he would like to see the motion passed, as he believed it would be to the advantage of the Maritime Provinces were a railway commission appointed.

After some further discussion, Mr. Innes' motion was carried by 14 to 5.

THE QUESTION OF SUBSIDIES.

Mr. P. Innes then introduced his resolution on railway subsidies, which read as follows :

Whereas, the subsidizing by the Dominion Government of the Furness Line of steamers has created a monopoly and has led to the charging of excessive rates of freight on apples to Great Britain from the ports of Halifax and St. John; and

Whereas, it may be inexpedient in the meantime to discontinue such subsidies;

Therefore, resolved that this Board ask the Government to exercise supervision and control over the rates charged by subsidized steamers, so that at no time they shall exceed corresponding rates from competing Atlantic, Portland, Boston and New York ports, and further, that the Government appoint inspectors to superintend the loading of apples in such steamers and see as to their ventilation and general suitability for carrying the freight offering.

Mr. F. E. Cox seconded the motion.

The motion proved to be an exceedingly lively subject for debate, the liveliest and most prolonged of the convention.

Mr. J. E. De Wolfe said it was a question purely of supply and demand. "While we have such a small amount of business in Canada as we have, we cannot expect as low a rate of freight as the shippers from United States ports," he said, "and, if the subsidies were taken off, we would not have as low rates as we have to-day." He said that the grievance was more imaginary than real, and declared that the present rail and boat rate of 90s. did not net the steamer over 2s. 6d.

Mr. T. C. L. Ketchum, Woodstock, N.B., declared himself in favor of the Government supervision of railway rates. "When," he said, "we, five years ago, came down here to the meeting of the Maritime Board of Trade, the C.P.R. had an arbitrary rate of 25c. per 100 lb. on freight from McAdam Junction to Woodstock. The matter was brought before the board then. Shortly after this, whether through the influence of the board he could not say, the rate was reduced to 12½c., at which figure it still stood.

Mr. D. G. Smith, Chatham, N.B., thought it was a matter that should be relegated to the Halifax Board for consideration.

Mr. J. M. Carmichael : "I sympathize with the fruit growers, but I cannot support a resolution half as strong as that now before us. Not because I think they have no grievance, or that the steamship people are perfect. I know they are not. We steamshipmen take all we can get, just as people in other lines of business do. One very good reason, however, that the rates are excessive is that the steamship owners will take all the apples they can get in preference to other freight. I trust that the efforts of Mr. Innes and his friends to get better rates will be successful, but I am afraid that, until the Canadian trade is large enough to warrant the putting of larger boats on Canadian routes, the shippers of this country will have to pay higher rates from their own ports than are paid on freight from Boston and Portland."

In reply to a question, Mr. Carmichael said : "I am opposed to the granting of subsidies for the carrying of freight. The subsidized line drives the unsubsidized line out of competition." (Hear, hear.) "For instance, a subsidized line going to St. John is determined that it will get a full cargo, and to get it will underbid my steamer. The result is that I am driven out of the port. I again say I am against subsidies for carrying freight; for the carrying of passengers it may be all right."

Mr. W. S. Fisher : "I believe the people of St. John sympathize with the Dominion Government in its desire to see the time when subsidies can be wiped out, but at present it seems impossible to divert the shipping trade from United States ports without the aid of subsidies."

Mr. Carmichael : "Let me explain my position. I would not vote for the abolition of subsidies at present."

Mr. Estabrooks : "If the resolution was divided I think there is a portion of it that should be supported, and that is that part which deals with the supervision of the shipping of perishable cargoes. To be able to guarantee the arrival of our apples on the other side of the Atlantic in good order would be worth a geat many dollars.

Mr. Innes explained that the terms of the contract with the Furness Line provided for the inspection of the fruit and the supervision of the rates, but they were not being put in force, and "this resolution," he added, "is simply to jog the memory of the Government."

M. J. E. DeWolfe : "Then, why come here and take up the time of the Maritime Board ?"

Mr. Innes : "Simply because the clause is a dead letter."

Mr. Schofield, who is agent at St. John for the Furness Line said that there were grounds under which the subsidies could be justified. "As far as our line is concerned, we do not like subsidies, but present circumstances demanded that they should be given. I remember this port for 36 years, and remember when a number of steamship lines ran here, and they brought and carried away good cargoes. Then came the 'National Policy,' which laid down the principle that goods consumed in this country should, as far as possible, be manufactured in this country. This policy has been successful, but the result has been to reduce the volume of freight, which the steamers running here depended upon, by fully one-fourth. The result was a great reduction in rates, and the consequence was that steamships were driven away. Then came an agitation for subsidies, and this agitation increased with the desire for a development of the trade between Canada and Great Britain. This agitation is still going on. The proof of the need of a subsidy was the limited character of our trade."

He explained that the reason the Furness Line bought out a certain competing line was the knowledge that there was not enough business for the two concerns. "No line," he said, "would be more pleased than the Furness Line if it were possible to do away with subsidies ; but it is not possible." He read the clause from the contract between the Dominion Government and the Furness Line in which it was laid down that the steamship company could not charge a higher freight rate on Western goods for export than was charged by United States lines. The Government, he also showed, had the power to fix the maximum rates.

"Last year," he continued, "27,000 barrels of apples were shipped through St. John, but as far as I am aware there was not one complaint as to rates of freight, neither specific or general." Then he read letters claiming that the Furness company was charging the same rate on apples from both St. John and Halifax.

Mr. Innes : "Can you explain to me why it is that from Boston apples can be shipped for 2s., while from Halifax the rate is 3s?"

Mr. Schofield : "Because they have a larger port and there is a larger quantity of freight to ship. Rates fluctuate according to the quantity of freight to be carried. Why, I have known steamers to refuse to take apples from Montreal even at a 3s. 6d. rate. Now, of the 90c., rail and boat rate, the steamer apparently gets 70c., but she does not in reality. There is a class of middlemen, and they, like the railways and the steamers, try to get all they can out of it. And I am sure there are middlemen who make more money out of the apple export trade than the producers do. It is the middlemen in Nova Scotia who are really to blame for these high rates. These men have the steamshipmen by the throat, and demand a rebate of 10 to 15c. per barrel as their share of the proceeds.

Mr. Innes : "Go on ! That is news and we were never able to learn before what the middlemen got."

Mr. Schofield, continuing : "If the Maritime Board is going to deal with the matter it should deal with the real culprits, namely, the middlemen. Do not blame the steamshipmen who are forced to do what they do."

A delegate : "Would the Furness Line give the rebate to the farmers who grow the apples ?"

Mr. Schofield: "We would gladly do so. And that is what we shall have to do."

Mr. Innes: "Who created the middlemen?"

Mr. Schofield: "I cannot say."

Mr. Innes: "Well I can. It was the Furness Line." (Laughter.)

Continuing, Mr. Schofield claimed that the Furness Line was not discriminating in its rates, and produced the following table in support of his contention, the figures in which he declared were correct to a cent:

BATTLE LINE STEAMERS.
Loaded at St. John, N.B., during Summer Season, 1899.

Steamers.	Tonnage.	Standards.	Rate.	Freight.	Per Ton Register.	Furness Line. Per Ton Register.	Furness Line. Freight.	Difference.
Cheronea	2,059	1,668	45/-	£3,753	36/5	18/8	£1,922	£1,831
Platea	2,043	1,674	52/6	3,557	34/9	18/8	1,907	1,650
Cunaxa	2,045	1,598	40/-	3,196	31/3	18/8	1,909	1,287
Leuctra	1,949	1,576	43/-	3,388	34/9	18/8	1,819	1,569
4 Steamers—totals	8,096	6,516	.....	£13,894	.. ..	.....	£7,557	£6,337
4 Steamers—average	2,024	1,629	42/7	£3,473	34 4	18/8	£1,889	£1,584

Battle Line—Average freight rate ..... £1 14s. 4d. per ton register.
Furness Line— " " ..... 18s. 4d. " "
Difference ..... £0 15s. 8d. per ton register.

Battle Line steamers 84 per cent. more than Furness Line steamers.

FURNESS LINE STEAMERS.
Freight—St. John and Halifax to London.

April to August, inclusive—Average freight rate ..... £0 18s. 8d. per ton register.
September to March " " " ..... 1 6s. 8d. " "
January to December " " " ..... 1 3s. 6d. " "

Apple shipping season, September to March.

The President announced that he had received a telegram from Ottawa in reply to one sent the previous evening as to whether the contract for carrying the mails had yet been granted. It was signed by Deputy Minister Parmelee, and read as follows:

"Am not yet in position to give information asked for in your telegram of yesterday."

Resuming the discussion on Mr. Innes' motion, Mr. McLaughlin said he would be compelled to vote against it, because the matter (1) was not within the purview of the Maritime Board, (2) it was against subsidies, and because (3), in asking for the appointment of inspectors, it was asking for what was already provided. The people of St. John were only in favor of subsidies, however, as an expediency, and were hoping for the time when subsidies would not be necessary. The people of St. John had already spent $700,000 on improving the Harbor.

Further discussion was deferred until the afternoon session, and the session adjourned till 2 o'clock.

The convention resumed at 2.40 p.m.

Mr. C. L. Dodge resumed the discussion on Mr. Innes' motion re freight discrimination. He said the position of the shipper in the Annapolis Valley was a very unfortunate one. The Furness Line is very heavily subsidized, and to this subsidy the farmers of the Annapolis Valley were very heavy contributors. He was surprised that the agent of the Furness Line should admit that 15 or 20 middlemen were able to take his company by the throat. "We do not," he said, "object to the subsidy on steamers running to St. John and Halifax, but we do object to the heavy tax which these subsidized lines place upon the farmers of the Annapolis Valley." He said that 400,000 barrels would be moved in the Valley this season. Referring to the supervision of the loading of the steamers, he said that often, rather than trust to the longshoremen, he had taken off his coat and unloaded his car of apples. He held, therefore, that supervision was necessary.

Mr. Jarvis said that he would regret to see the question shelved, as it would be in the event of Mr. Innes' motion being defeated. He therefore moved this resolution:

Resolved, that the resolution already passed be referred to a committee to carry the same into effect, and that such committee be further requested to take into consideration the resolution now proposed, and to take such steps as may lead to the arrangement of fair and equitable rates of freights and proper provisions for the handling of apples by any subsidized steamship line.

Mr. Jarvis explained that the first resolution referred to in his motion was that relating to the railway commission.

Mr. John Ervin seconded the motion.

Mr. J. E. DeWolf said there was some truth in what had been said in regard to the middlemen, but he contended that a great deal that had been said was not true. There had been too much exaggeration. Some of the middlemen were forced to give back to the shippers a part of the rebate they got. The middleman, he claimed, was a necessity, and he showed how in getting cargoes he was such. In regard to excessive rates, he asserted that they were often more imaginary than real, as the fact was that apples required the best location on the ship.

Mr. Innes: "I am here, not as a member of your board, but on invitation, as representative of the Fruit Growers Association of Nova Scotia. There is a grievance, but, as the matter is in your hands, it is for you to say which is the best way to deal with it."

Mr. Schofield ventured the information that already efforts were being made to bring about a conference of shippers and of steamboat owners.

Mr. Smith moved that in the event of the committee not being able to arrive at a unanimous agreement in regard to Mr. Innes' motion re discontinuation of freight rates, that it report back to the Maritime Board at its next annual meeting. Mr. Jarvis seconded.

Mr. Dodge: "If the Maritime Board is not prepared to give us any consideration I would rather see the resolution defeated."

Mr. Innes similarly expressed himself.

Mr. Robertson, M.P.P., wanted to know if every means had been made by the shippers to have the difficulty remedied.

Mr. Innes: "Yes; we have tried for years to get the railways to provide remedies, but have failed."

Mr. Schofield: "I am in receipt of a letter from the Halifax office, in which it is stated that it is the intention of the company to do away with the middlemen. To have only an ocean rate and to have the farmers pay their own railway freight rates direct."

Both Mr. Jarvis and Mr. Smith's motions were carried, and the following were appointed a committee to consider Mr. Innes' two resolutions: C. L. Dodge (chairman), D. J. McLaughlin, S. Schofield, W. S. Fisher, R. S. Eaton, Fred. E. Cox, S. C. Parker, and three representatives from Halifax, to be named by the board of that city.

THE LOBSTER INDUSTRY.

In opening the subject of the lobster industry, Mr. W. S. Loggie said that if the condition of the lobster industry continued in the future as in the past it would ultimately be destroyed. "One way suggested to remedy the evil is to limit the size of the lobster to be caught. But the trouble with that is that it is not practicable to carry on the canning industry if the size is limited. To my mind the first thing which ought to be done is to grant no extensions. As you know, the commission appointed last year reported against granting extensions. I would further recommend that the seasons be shortened by five days each year for a certain number of years."

He explained that the average catch of lobsters per boat was 60 to 70 a few years ago. To-day it is only about 30 to 40.

In closing, he read the following resolution :

Whereas, a very large amount of capital is invested in the lobster-packing industry which cannot be withdrawn therefrom without serious loss to the investors thereof, and

Whereas, the record of declining catches and total extinction of the industry in localities where it formerly flourished leads to the conviction that the present regulations, as to length of open season and size of lobsters which may be legally taken, are calculated to destroy the industry in the Maritime Provinces, and

Whereas, it is an established fact that, if a legal size of nine inches and larger only were permitted or made as it is on the New England coast in order to save the industry from extinction, it would be impossible to carry on the industry, and

Whereas, the extension granted the past season in the Straits of Northumberland was prejudicial to and destructive of the interests, as well as inequitable, inasmuch as it was practically a discrimination against other localities on the coast and in harbors where lobsters come in sometimes more plentiful towards the middle of July.

Therefore, resolved—That in the opinion of this board : (1) That no extension beyond the regular season fixed by the regulations should be granted under any circumstances in any locality. (2) That the season for packing for next year be five days shorter all round our coast line than in 1898 ; that in 1901, ten days shorter than said season, and that this policy of shortening the season be continued each year until it is found that the existence of lobsters on our coasts as a paying national product is no longer imperilled. (3) That fishermen taking lobsters with spawn on out of traps be compelled under penalty to return them immediately to the sea, and that packers be placed under obligation as far as practicable that fishermen under their control carry out a regulation to this effect. (4) That no lobsters be taken by "curlies," as only small ones are so taken, as a rule. (5) That the fishing for canning be prohibited altogether in the rivers and bays in the month of July, when the lobsters resort thereto for the purpose of spawning or casting their shells.

Mr. D. G. Smith seconded the resolution.

Mr. Robertson, M.P.P.: "There is a shadow of doubt in my mind. It is not by any means clear to me as to whether it is desirable to have a uniform season. I thought that at a former meeting of this board that a good case was made out against uniformity of the season."

Mr. Loggie, in reply to a question, stated that, up to a certain geographical point in Nova Scotia, fishing stopped on July 15, and up to another on July 1. In his opinion there should be no fishing at all in July.

Mr. A. I. Teed thought the board should have more specific information before passing upon the question.

Mr. Murchie thought that something should be done to save the industry.

The motion carried.

RAILWAY FROM VICTORIA BEACH TO MIDDLETON, N.S.

This subject was introduced by Mr. John Ervin, of Bridgetown, N.S. He said that capitalists were ready to build the road provided they could get the Government to lend the usual aid. The road was a necessity, as a great many people were now greatly inconvenienced in getting their produce to market. The country through which the line would run was rich. The proposed line is north of the Dominion Atlantic Railway, and the terminus, Victoria Beach, is on the Digby basin. Mr. Ervin read the following :

Whereas, having considered the memorial of the Bridgetown Board of Trade, re proposal to build a line of railway from Victoria Beach to Middleton. And, whereas, such railway will open a thickly settled and fertile section of Western Nova Scotia, which is now without any railway facilities. And, whereas, such railway will also afford a convenient and short route of transportation to a shipping port for the large fruit production of the county of Annapolis. And, whereas, such line of railway will come in connection with other lines of railways now built or in course of building, thereby giving a through line from the Annapolis Valley to the city of Halifax.

Therefore, resolved, that this Board approve of the construction of such line of railway, and consider it is deserving of such Government aid and encouragement as is usually given to railways intended to serve the public interests.

Mr. F. E. Cox, Middleton, seconded the resolution, and in doing so, explained that he did so on his own responsibility and not as a representative of the Middleton Board.

Messrs. Schofield and Hathaway supported the resolution, which was carried.

THE WEIGHT OF CANNED GOODS.

Mr. W. F. Hathaway, of St. John, introduced the following resolution :

Whereas, the want of uniformity in the weights of canned fruits, provisions, etc., is unfair to the consumer and is also hurtful to the true interests of trade.

Therefore—Resolved, that in the opinion of this Maritime Board of Trade all canned meats, vegetables, fruits, fish, packets of tea, tins of lard should show in plain lettering the weight of contents.

That penalties should be imposed upon all packers and canners who do not stamp their goods, and also that penalties should be imposed on all dealers and traders who expose such unstamped goods for sale.

And further resolved, that the secretary, before February 1 of next year, forward copies of this resolution to the Minister of Trade and Commerce, and also to the several Dominion representatives from Prince Edward Island, Nova Scotia and New Brunswick.

In speaking to the resolution, Mr. Hathaway, wholesale grocer, said there was sometimes a difference of 3 to 5 oz. in the different packs of canned goods, particularly fruits. The weight of canned goods was, as a rule, correct. The question was whether the wholesale houses are to continue selling light-weight goods. For his part, he did not propose to do so if he could help it. The wholesale grocer was not responsible for the short weights. It was the dishonest packer.

Mr. Alex. Henderson, of Woodstock, N.B., seconded the resolution, and, in doing so, said that his company was already putting the weight on their packages of canned goods. He further stated that his factory had this year shipped 40 tons of canned raspberries to England, and it had orders for all the gallon apples it could put up.

The motion was carried unanimously.

Fred. E. Cox introduced the subject of a daily mail service across the Bay of Fundy. He moved as follows :

Resolved, that in the opinion of this board the D. A. Railway steamboat service between St. John and Digby is of such importance to the business interests of the large territory interested as to call for a daily service the year round.

It was discussed at some length, and finally, in view of a recent discussion between Mr. Gifkins and the St. John board relative to the matter, it was withdrawn.

The present subsidy is $12,500 per year. There is now a daily service four or five months during the year, a tri-weekly for about two months, and four trips per week during the winter months.

The convention adjourned at 5 p. m.

The board convened at 8.30 p.m. with President De Wolfe in the chair. The attendance was better than in the afternoon.

TOP WHARFAGE AT DIGBY.

The first order of business was the consideration of a memorial signed by W. W. Ogilvie and a number of Ontario and Annapolis Valley millers in regard to top wharfage for goods lying on the Government wharf at Digby.

The President : What shall we do with it ?

Mr. Conrad moved that the board concur in the memorial. Mr. Cox seconded.

Mr. Carmichael said that before he voted upon the question he wanted information.

Mr. McLaughlin read a clause from the memorial which he considered would give the desired information. The clause read : "In March, 1897, the Government agreed to exempt this traffic from top wharfage at Digby pier by refunding in full the amount collected. With this understanding rates were arranged and continued up to the present, whereby it was possible to meet the competition of the American railways and have this traffic diverted through Digby. The result has been, since the Government so wisely came to this conclusion, that up to December 31, 1898, equal to 62,020 barrels, and from January 1 to June 30, 1899, 22,464 barrels, or a grand total of 84,484 barrels, were diverted to this all-Canadian route."

The motion was then carried.

A communication was read from Mr. Murray Hentis, of the Sussex board, desiring the board to thank the St. John board for the entertainment of the previous day.

A PROPOSED ELECTRIC ROAD.

Mr. W. V. Brown, of Berwick, introduced the following resolution :

Whereas, the need of a second and competing transportation railway line between Halifax and St. John, through Western Nova Scotia, is generally recognized.

And, whereas, certain London and Berlin capitalists have intimated their willingness to construct an electric railway from Halifax to Annapolis or Digby, provided certain concessions are offered.

Therefore, resolved, that in the opinion of this Board every encouragement should be given towards the furtherance of this enterprise by our Government, boards of trade, municipal and town councils and newspapers.

Mr. John Ervin, in seconding the resolution, explained that the Berwick board had received a communication from capitalists in London and Berlin in regard to the possibility of building an electric railway in the Annapolis Valley. Their communication had been replied to. Since then the capitalists had been again heard from, in which they said they were prepared to build a road provided certain concessions were made. What these concessions were they had not stated.

Both Mr. Robertson, M.P.P., and Mr. Jarvis thought that it would not be advisable to adopt the resolution.

Mr. Brown said he had statistics to submit. "We were not the movers in this

matter ; we were approached," he said. With the consent of the seconder, he withdrew his resolution.

THE PACKING OF APPLES.

Mr. Jarvis, at the request of the Berwick Board of Trade, introduced the following resolution :

That some steps be taken to secure better regulations regarding the packing and branding of apples, and that a copy of this resolution be sent to the Departments of Inland Revenue and of Agriculture at Ottawa.

In introducing the resolution, Mr. Jarvis said that everyone who consumed apples realized the necessity of some such law as that suggested.

Mr. J. E. De Wolfe, in seconding the resolution, said that regulations were necessary which would make dishonest packing criminal.

Mr. P. Innes explained that, at the last session of Parliament, a bill had been introduced, at the instigation of Prof. Robertson, having for its object the packing and branding of apples. When the bill was being considered representatives of the Fruit Growers Associations of Ontario and Nova Scotia were consulted, but the representatives of the two associations had been unable to agree as to the defining of standards. Ontario, for instance, contended for size, as indicative of No. 1 A, while Nova Scotia, whose small apples were among its best, would not agree. The bill would be taken up again next session and would probably become law.

The resolution was adopted.

TOURIST TRAVEL.

The following resolution was introduced by Mr. J. D. McKenna :

Whereas, tourist travel is fast assuming considerable proportions in the Maritime Provinces,

And whereas, it has been demonstrated that such travel has proved of great benefit to such Provinces,

Therefore, resolved—That this meeting views with favor the earnest efforts of the many towns of these Provinces to encourage the coming of tourists, and would impress on delegates the importance of the construction of summer hotels, and the more general advertising of the natural beauties and advantages of Nova Scotia, New Brunswick and Prince Edward Island from a tourist's standpoint, and that special attention should be directed to the encouragement of this class of travel from Quebec and Ontario.

In speaking to his resolution, Mr. McKenna cited instances of the benefit the Maritime Provinces had received from tourist travel. The matter was, therefore, most important.

Mr. J. E. De Wolfe seconded the resolution. He complained that 99 per cent. of the tourists who visited the Maritime Provinces were not from Ontario and Quebec, but from the United States. In looking over the papers he seldom saw reference to tourists from Ontario and Quebec.

Mr. Hazzard mentioned that when recently in a hotel in Prince Edward Island, he was surprised to see about 60 Toronto people. "It was like a colony of Torontonians," he concluded.

Mr. Conrad stated that he was recently in Cape Breton, and he saw a number of Toronto people there with their families.

After further discussion, the resolution was adopted unanimously.

SUBJECTS FOR DISCUSSION.

Mr. D. J. McLaughlin gave notice of the following notice of motion :

No questions for discussion by this Maritime Board shall be considered by the Board unless notice of at least one month shall be sent to the secretary, to be forwarded by him to each affiliated Board of the intention to introduce such subject for discussion at the annual meeting of the Maritime Board.

Mr. Geo. Robertson, M.P.P., moved the following resolution :

Whereas, since the last meeting of this Board, statutory conditions for fire insurance policies have been established in Nova Scotia,

Resolved, that committees be appointed to confer with the fire insurance companies to secure similar legislation in New Brunswick and Prince Edward Island.

The motion was seconded by Mr. D. G. Smith and carried.

A complaint having been made in regard to careless handling of freight between St. John and Digby, Mr. D. G. Smith moved that the matter be left with the local boards to deal with.

The motion was seconded by Mr. Ervin and carried.

The secretary presented an interim report showing a balance on hand of $94.25.

On motion of Mr. Smith, the secretary was instructed to communicate with local boards of trade which had not yet paid their per capita tax.

KENTVILLE NEXT PLACE OF MEETING.

It was decided, on motion of Mr. Geo. Robertson, to hold the next annual meeting at Kentville, N.S.

Then came votes of thanks to the St. John Board of Trade, to the press, to the president, to Mr. Allison, and, after a motion closing the convention was adopted, all joined hands and lustily sang "Auld Lang Syne." By this time it was nearly 11 o'clock.

A DOUBLE FEAST.

It was not all work that demanded the attention of the delegates to the convention, for, on Thursday afternoon, they were entertained by the local board to a sail and banquet on the St. John river.

The steamer, the Victoria, left Indiantown at 3.30 p.m., and carried the excursionists about 35 miles up the river.

Just as as the return journey was commenced, the guests, about 150, sat down to a banquet in the spacious dining-room situated on the main deck of the steamer.

After the banquet, the toast list was taken up in the saloon of the steamer, and speeches were delivered by United States Consul Myers, Mr. George Robertson, M.P.P., President De Wolfe, Mr. H. Hazzard, Mr. J. E. De Wolfe, J. M. Carmichael, and others. Those of the speakers from outside points deservedly praised the St. John board for the excellent arrangements made for their entertainment, and over the scenery of the St. John river they waxed eloquent. Mr. Hazzard declared that, in some respects, it equalled, if not surpassed, the Rhine, although, of course, it had not the rugged and strikingly handsome castles to be found on that river.

It was only natural that the speakers should have waxed eloquent over the scenery on the river. On either bank of the river, with their bases gradually sloping towards the river, towers a continuous range of mountains hundreds of feet high, and capped with dark green trees and decorated with pasture lands of bright green.

It was nearly 11 p. m. when the steamer was again moored to her wharf.

CONVENTION NOTES.

It was not because President Jarvis is a fire insurance man that there was so much "fire" in his annual address. It was because it had so much "meat."

It was de-Creed that Secretary Creed, of Halifax, should have a good time and he had it.

The Nova Scotian delegates were all agreed that there was no fog about the arrangements got up for their entertainment.

Mr. P. Innes, of Kings County, N.S., was the biggest man at the convention.

No one was more indefatigable than Mr. Fisher in looking after the interests of the delegates.

President De Wolfe is a conscientious and painstaking officer, and has the interests of the Maritime Board at heart.

President De Wolfe promised the Maritime Board a good business time at the next annual convention.

Mr. John Ervin, of Bridgetown, was one of the most faithful attendants at the meetings of the convention.

Mr. S. Schofield appeared to be loaded with documents to support every argument.

Secretary Allison has a cool head and a capacity for work.

Retiring President Jarvis' address should be read by everyone.

CANADIAN COMPUTING SCALES.

Since the introduction of computing scales into Canada, C. Wilson & Son, the Toronto scale makers, not only secured the right to make the American money-weight scales, but invented new designs of their own. A special feature about the Wilson computing scale is that it shows the money value and weight all at the same time. This is a great advantage, as the grocer can tell the customer the weight without having to weigh the goods a second time. Another advantage is simplicity of construction, and the workmanship is all that can be desired. A very important point is the bearings, they are agate and diamond steel, and under the marble platform where the weak points give out first, the Wilson scale has ball-bearings. They are claimed never to wear out. The business of this firm has extended so much recently that they have been forced to open a warehouse in Winnipeg for the supply of the Western orders. They are now making over 100 styles of scales, so that if the grocer does not wish a computing or money scale he can get their catalogue and can choose any size from the largest railroad track scale down to the finest tea scale.

MARKETS AND MARKET NOTES.

QUEBEC MARKETS.

MONTREAL, August 25, 1899.

HARDWARE.

UPWARD and still upward is evidently the motto for values in the iron and hardware market, for we have to note further radical advances this week. Smooth steel wire, for instance, is 15c. higher, and barbed, while unchanged, is held firm. Fine steel wire has been advanced 2½ per cent., and fence staples are from 15 to 20c. higher. Wire nails have been marked up 15c. per keg. The further rise has naturally attracted attention, but jobbers are filling orders very sparingly, not only in these, but in all other lines of material, as makers, both in Canada and the United States, are so choked up with orders, that they are liable to decide upon still further advances. In fact, their reserve stocks are practically nil, and the same circumstances govern in the case of jobbers, whose stocks are light as a general rule in all leading lines.

BARBED WIRE—Business continues quiet and prices unchanged at $3 f.o.b. factory, and $3.10 to $3.15 in a small way.

SMOOTH STEEL WIRE — There has been an advance of 15c. in this line, the base price now being $3 for Nos. 6 to 9 per 100 lb.

FINE STEEL WIRE—Values on this article have been marked up 2½ per cent., the discount now being 17½ per cent. off list.

BRASS AND COPPER WIRE—Continue unchanged at 50 and 2½ per cent. on brass and 45 and 10 per cent. on copper wire.

FENCE STAPLES—Values have been advanced 15 to 20c., the base price now being $3.25 for bright and $3.80 for galvanized per keg of 100 lb.

FINE STAPLES—Steady. Discounts are: Cooper, 55; poultry netting, 45, and electrician, broom, bed, etc., 40 per cent. off.

WIRE NAILS—These have been advanced 15c. per keg, to $3, although some jobbers are still filling orders at $2.85 to $2.90. Miscellaneous list, 75 per cent. discount.

COPPER WIRE NAILS—Steady to firm, at 50 per cent.

CUT NAILS—Steady, with moderate demand, at $2.25 per keg f.o.b. the usual delivery points. In the Maritime Provinces, however, this figure has been shaded, $2.15 being accepted.

FLOUR BARREL NAILS — No change. Flour barrel 30 and coopers' nails 35 per cent. discount.

BOAT NAILS—Unchanged, at 33⅓ per cent. discount on black and galvanized.

GALVANIZED ROOFING NAILS — These are firmer, at 8c. per lb., with 10 per cent. off list.

PRESSED SPIKES — Quiet and steady, at 30 per cent. off list.

HORSE NAILS—As last reported, 50 per cent. on standard and 50 and 20 on other brands.

HORSESHOES — A fair movement is experienced. We quote as follows: Iron shoes, light and medium pattern, No. 2 and larger $3.50; No. 1 and smaller, $3.75; snow shoes, No. 2 and larger, $3.75; No. 1 and smaller, $4; X L steel shoes, new light pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; featherweight, all sizes, Nos. 0 to 4, $5.15; and toe weight steel shoes, all forward, all sizes $6.25 f.o.b. Montreal, St. John, N.B.,

and Halifax, N.S. Delivered f.o.b. in Toronto, Hamilton, London and Guelph 10c. per 100 lb. extra.

SCREWS — There is a brisk inquiry. Discounts are as follows: Flat head, bright, 80 and 5 per cent; round head do., 75 and 5; flat head, brass, 75 and 5; round head do., 67½ and 5.

BOLTS—A good movement is noted in these. Discounts are: Carriage bolts, 5-16 and smaller, 55 per cent.; ⅜ and up, 50 per cent.; full square bolts, 65 per cent.; machine bolts, 55 per cent.; coach screw bolts, 67½ per cent., and sleighshoe bolts, 72½ per cent.

NUTS AND WASHERS — In fair request. We quote as follows: Square, 3¾c. and hexagon 4¼c. per lb.; discount off list. Washers in 50-lb. boxes are 50 per cent. discount.

RIVETS—Business is fairly active. Discounts are: Black and tinned, 45 per cent.; ditto burrs, 40 per cent.; copper rivets and burrs, 35 per cent.

CORDAGE — Business quiet, but prices have been advanced all around. We quote: Manila, 7-16 and up, 12½c.; ⅜, 13c., and ¼ and 5-16, 13½c. Sisal, 11c. for 7-16 and up; 11½c. for ⅜, and 12c. for ¼ and 5-16.

WRINGERS — There is a good movement in these, with prices firm at $48 to $60, as to brand, with 45 per cent. off list.

BUILDING PAPER — Quiet and steady. We quote: Plain building, 28c.; tarred lining, 35c.; tarred roofing, $1.40, and carpet felt, $2.25.

CUTLERY—There is an improved demand for these goods.

SPORTING GOODS—A heavy movement in these has developed this week for guns and ammunition, but particularly for loaded shells.

CEMENT — Has ruled quiet and steady. We quote: Belgian, $1.90 to $2.10; English, $2.30 to $2.40, and German, $2.45 to $2.65, per cask ex wharf.

FIREBRICKS — There is a good demand for these, and we quote $17 to $23 per 1,000, as to brand, ex wharf.

METALS.

The strength in all kinds of heavy iron and metals continues, as will be noted from the advances recorded in the following reports, and specially dwelt upon elsewhere.

BAR IRON—There has been an advance of 10 to 15c. in this material, the base price being $2.10 to $2.15 f.o.b. Montreal, and makers assert that they have more orders than they know what to do with.

PIG IRON—The market gathers strength with each successive week, and now no Scotch iron is obtainable under $24, and we quote $24 to $25. Domestic pig iron is not quotable at all.

BLACK SHEETS—These are steady.

HOOP IRON — Has advanced, the base price now being $3 to $.25 for jobbing lots.

STEEL — The firm tendency is retained, and machinery is held 25c. higher. We quote: Sleighshoe and tire, $2.50; spring, $2.75; machinery, $3.25, and toe calk, $3.

GALVANIZED IRON—Demand is brisk, but jobbers are accepting orders with reserve. We quote as follows: Queen's Head, $4.55 to $4.80; Comet brand, $4.30 to $4.55, according to the size of the order.

INGOT COPPER—This metal is firmly held at 19½ to 20c.

INGOT TIN — There is no change in the spot price of this, the base being retained at 36c.

PIG LEAD—Firm, with a fair inquiry, at $4.25 per 100 lb.

LEAD PIPE—Quiet. We quote: Ordinary, 7c., and composition waste, 7½c., with 20 per cent. discount.

IRON PIPE—This material is strong and tending upward. In fact, Montreal is the cheapest market in the world for certain sizes. We quote: Black pipe, ⅛ and ¼-inch, $3.12; ⅜-inch, $3.25; ½-inch, $3.75; 1-inch, $5.20; 1¼-inch, $6.85; 1½-inch, $8.75 and 2-inch, $11.02. Galvanized pipe, ⅛ and ¼-inch, $5.64; ⅜-inch, $6.64; ½-inch, $7.41; 1-inch, $10.12; 1¼-inch, $14.03; 1½-inch, $17.16, and 2-inch, $23.

TINPLATES — Jobbers note numerous orders, but are filling them sparingly. We quote as follows: Coke, I. C., $4.40; charcoal, I. C., Allaway or Comet brands, $4.80; do. I. X., $5.05; Lincoln, $5; P. D. Crown, $5.30; do. I. X., $5.80; Bradley's, $6.25.

CANADA PLATES — The same remarks apply to this line. We quote: 52's, $2.60; 60's, $2.70; 75's, $2.80; full polished, $3.25; galvanized Canada plates, $4.55 for 52's.

TERNE PLATE—Firm and unchanged at $7.50.

SWEDISH IRON—This material has advanced fully 15c., the base price now being $3.40.

COIL CHAIN — Steady, and with more inquiry. We quote as follows: No. 6, 10¾c.; No. 5, 9¼c.; No. 4, 8¼c., and No. 3, 7¼c. per lb.; ¼-inch, $6; 5-16, $4.75; ⅜, $4.25; 7-16, $4.10; ½, $4; 9-16, $3.95; ⅝, $3.85; ¾, $3.65, and ⅞, $3.55 per 100 lb.

SHEET ZINC — Firm and unchanged at 7½ to 7¾c.

ANTIMONY—As last noted, at 10 to 11c.

SPELTER—Firmly held at $7.

GLASS.

Window glass continues unchanged. We quote as follows: First break, $1.90; second, $2 for 50 feet; first break, 100 feet, $3.60; second, $3.80; third, $4.25; fourth, $4.50; fifth, $5; sixth, $5.50, and seventh, $6.

PAINTS AND OILS.

The market is beginning to feel the effect of fall orders, which are now commencing to come in. Demand for paints and varnishes from manufacturers is good, and general trade is satisfactory for the season. Linseed and turpentine are steady. We quote:

WHITE LEAD—Best brands, Government standard, $6.00; No. 1, $5.62½; No. 2, $5.25; No. 3, $4.87½.

DRY WHITE LEAD—$4.75 in casks; kegs, $5.

RED LEAD—Firm; casks, $4.50; in kegs, $4.75.

WHITE ZINC PAINT—Pure, dry, 8c.; No. 1, 6½c.; in oil, pure, 9c.; No. 1, 7½c.

PUTTY —We quote: Bulk, $1.65; bladders, in bbls., $1.80; bladders, in cases, $1.95; in tins, $2.05 to $2.30.

LINSEED OIL — Raw, 57c.; boiled, 60c., five to nine-barrels, 1c. less, ten and twenty-barrel lots open, net cash, plus 2c. for 4 months. Delivered anywhere in Ontario between Montreal and Oshawa at 1c. per gallon advance and freight allowed.

TURPENTINE—Single barrels, 75c.; two to four barrels, 74c.; five barrels and over, open terms, the same terms as linseed oil.

MIXED PAINTS—Firm; $1.10 to $1.30 per gallon.

CASTOR OIL—Firm; 7½ to 8c.

SEAL OIL—35½ to 37½c.

COD OIL—35 to 37½c.

NAVAL STORES—Fair demand for all lines, and prices show no change: Resins, $2.75 to $4.50, as to brand; coal tar, $3 to $3.50; cotton waste, 4½ to 5½c. for colored, and 6 to 7½c. for white; oakum, 5½ to 6½c., and cotton oakum, 9 to 11c.

PETROLEUM.

The petroleum market is firmer, both Crown Acme, and Silver Star being advanced. We quote as follows: Crown Acme, the new Sarnia oil, 16½c.; Perfection and Silver Star, Canadian refined, 15½c.; American prime white, 17c.; water white, 18c., and Pratt's astral, 19½c., in small quantities.

HIDES.

Unchanged. We quote: Lambskins, 40c. Beef hides, 9, 8 and 7c., while calfskins are 11 and 9c.

COAL.

Fairly active and firm. We quote: Stove, $5.75; chestnut, $5.75; egg, $5.50; Scotch grate, $6; Scotch steam, $4 to $4.50; Tower ports steam, $3.50 to $3.75.

MONTREAL NOTES.

Canadian petroleum has been advanced 1c. all round.

There has been an advance of 15c. in

Shipment Prompt. Prices the Lowest.

the price of both smooth steel wire and wire nails.

Turpentine and linseed are firm at the rise.

Bar iron is from 10 to 15c. higher than it was last week.

Hoop iron has scored a material gain on the week.

One half, ¾, 1 inch, 1¼ and 1½ inch black iron pipe are all higher.

The base price of Swedish iron here has been marked up from 15 to 20c. per 100 lb.

ONTARIO MARKETS.

TORONTO, August 25, 1899.

HARDWARE.

TRADE is keeping remarkably good for this time of the year. There have been few new developments in regard to prices. Canadian locks are, however, again higher. The same is to be said of builders' hardware. Wire nails are in fair demand at last week's advance. Hay-baling wire is going out in nice quantities. All other kinds of wire are quiet. Cut nails continue quiet. Quite a few orders for horseshoes and horse nails are being booked for delivery next month. An active trade is being done in screws and in stove bolts. Rope is in fair demand. There is still a fair trade being done in enameled ware, and in tinware business is moderate. The stove and furnace trade is good, and a good many shipments have already gone forward.

BARBED WIRE—There is very little doing. The price is unchanged at $3.25 f.o.b. Toronto.

SMOOTH STEEL WIRE—Some good orders are being received for hay-baling wire, but oiled and annealed is quiet. The base price is unchanged at $5 f.o.b. factory.

GALVANIZED WIRE—Trade is quiet. We quote: Nos. 6, 7, 8 gauge $3.40; No. 9, $2.90; No. 10, $3.50; No. 11, $3.55; No. 12, $3.05; No. 13, $3.15; No. 14, $3.90; No. 15, $4.50; No. 16, $4.65.

WIRE NAILS—The demand for wire nails is good at the advanced price. Relatively speaking, the price of wire nails is cheaper than wire. The base price is $2.85 in carload lots, and $2.90 in smaller quantities.

CUT NAILS — Trade is dull and prices unchanged at $2.25 base f.o.b. Toronto, Hamilton and London.

HORSE NAILS — There is a fair movement, and some good orders are being booked for future delivery. We quote: Standard, oval head, 50 per cent.; Acadia, countersunk head, 50 and 20 per cent.

HORSESHOES—A good many orders are being booked for delivery next month. We quote f. o. b. Toronto, Hamilton, London and Guelph: No. 2 and larger, light, medium and heavy iron shoes, $3.60; snow shoes, $3.85; light steel shoes, $4.00; featherweight shoes, all sizes, $5.25. No. 1 and smaller, light, medium and heavy iron shoes, $3.85 per keg; iron snow shoes, $4.20; light steel shoes, $4.15; featherweight steel shoes, all sizes, $5.25.

SCREWS—Trade is active, and prices firm and unchanged. We quote: Flat head bright, 80 and 5 per cent. off the list; round head bright, 75 and 5 per cent.; flat head brass, 75 and 5 per cent.; round head brass, 67½ and 5 per cent.; flat head bronze, 67½ and 5 per cent.; round head bronze, 62½ and 5 per cent.

BOLTS—Trade continues active, particularly in stove bolts. We quote as follows: Norway bolts, full square, 65 per cent.; common carriage bolts, 5-16 and under, 55 per cent.; ditto, ⅜ and larger, 50 per cent.; ditto, full square, 65 per cent.; machine bolts, all sizes, 55 per cent.; coach screws, 67½ per cent.; sleighshoe bolts, 72½ per cent.; blank bolts, 55 per cent.; bolt ends, 62½ per cent.; nuts, square, 3¾c.; nuts, hexagon, 4¼c.; tapping nuts, 60 per cent.; tire bolts, 60 and 10 per cent.; stove bolts, 60 and 10 per cent.

ROPE — In fair demand. We quote: Sisal, 7-16 in. and larger, 11½c. per lb.; ⅜ in., 12c.; ¼ and 5-16 in., 12½c. Manila, 7-16 in. and larger, 13c. per lb.; ⅜ in., 13½c.; ¼ and 5-16 in., 14c.; New Zealand, 11c. per lb.; Deep sea line, 13½c. for water laid, and 14½c. for machine-made; hemp, 7 to 9c.; lath yarn, 10c. Clotheslines, 48 feet, 90c.; 60 feet, $1.20; 72 feet, $1.50; 100 feet, $2.

RIVETS AND BURRS—Trade keeps fair. We quote: Carriage section, wagon box, rivets, etc. (steel), 60 per cent. off the list; ditto (Norway iron), 60 per cent.; black M rivets (steel), 55 per cent.; ditto (Norway iron), 45 per cent.; iron burrs, 40 per cent.; copper rivets, 35 per cent.; bifurcated, with box, $1.25; coppered iron rivets and burrs, in 5-lb. carton boxes, 30c. per lb.

CHURNS—Business is fair. We quote as follows: Metal frame — No. 0, $3; No. 1, $3.20; No. 2, $3.40; No. 3, $3.75; No. 4, $4.50; No. 5, $5.90. The price of wooden frames is 15c. per churn less than the above. Terms, 3 per cent. off 30 days f.o.b. Toronto.

WRINGERS — Not much doing. We quote as follows: "Leader," $60 per doz.; "Royal Canadian," $58; "Royal American," $48. Prices are all f. o. b. Toronto, Hamilton, Brockville, and Montreal. Discount, 45 per cent. Terms, our months, or 3 per cent. 30 days.

BUILDING PAPER—Trade keeps fair. We quote: Plain building, 28c. per roll; tarred lining, 35c., according to quality; tarred roofing felt, $1.40 per 100 lb.; carpet felt, $2.25 per 100 lb.

WARE—A fair trade is still being done in enameled ware, and a nice business for this time of the year is being done in tinware.

CEMENT—Some unusually large contracts have been let this week, including one from the Dominion Government calling for 12,000 barrels of Portland for the Trent canal. This was secured by a Canadian firm. As their is little foreign cement offering, these contracts have somewhat reduced the supply for general trade, so the price of car lots of Canadian Portland has been raised from $2.50 to $2.60 per bbl. The price of barrel lots is unchanged. We quote in barrel lots as follows: Canadian Portland,

$2.65 to $2.90; English do., $3; Canadian hydraulic cements, $1 to $1.10; calcined plaster, $1.90 ; asbestos cement, $2.50 per bbl.

METALS.

Tinned sheets are ½c. dearer, and bar iron is 15c. higher. In other lines of metals prices are much as before.

PIG IRON—The market continues firm. We quote Hamilton iron at $21 f.o.b. furnace.

BAR IRON—Is 15c. per 100 lb. higher, the base price now being $2.15.

BLACK SHEETS—Trade keeps good, with prices unchanged.

GALVANIZED IRON—The demand is good and stocks continue small. The price of 28 gauge is unchanged at $5.

COPPER—There has been more movement in ingot copper, and in general trade is good. We quote : Ingot tin, 20 to 21c. per lb. and sheet, 23 to 23½c. per lb.

PIG TIN—The outside markets are a little easier, but locally the price is unchanged at 37c. per lb. Purchases are not heavy, on account of the high prices ruling.

TINPLATES — Prices are firm in Great Britain, and orders which have been placed this week by wholesale importers are costing $1.35 per case more than in January last. Locally, there is a fair demand.

CANADA PLATES —As import orders have all been filled, business is expected to be rather quiet for the next month. We quote : All-dull, $2.75 ; half-polished, $2.85 ; all-bright, $3.20.

IRON PIPE—Trade keeps good and prices firm. Quotations on black pipe are : ¼ to ⅜ inch, $3.35 ; ½ inch, $3.40; ¾ inch, $4 ; 1 inch, $5.50 ; 1¼ inch, $7.35; 1½ inch, $9.25 ; 2 inch, $12.50 ; 2½ to 6 inch, discount off the list 45 per cent. Galvanized pipe is quoted as follows : ½ inch, $6.50 ; ¾ inch, $8 ; 1 inch, $11; 1¼ inch, $15.25; 1½ inch, $19 ; 2 inch, $27.

PIG LEAD—Trade is fair at 4½ to 4¾c. per lb.

LEAD PIPE — There is not a great deal doing. We quote: Ordinary pipe, 7c.; waste, 7½c. Discount, 20 per cent.

RANGE BOILERS — The demand is fair. We quote: Galvanized, 30 gals., $9; 35 gal., $10; 40 gal., $11. Copper, 30 gal., $22 ; 35 gal., $26 ; 40 gal., $30; discount off copper boilers, 10 per cent.

SHEET ZINC — The demand is active. Prices are unchanged at 8¼ for cask lots and 8½c for smaller quantities.

SPELTER—A fairly active trade is being done at 7½ to 7¾c. per lb.

SOLDER—In this line, trade is only moderate. We quote : 21 to 22c. for half-and-half ; 20 to 21c. for refined, and 18 to 19c. for wiping.

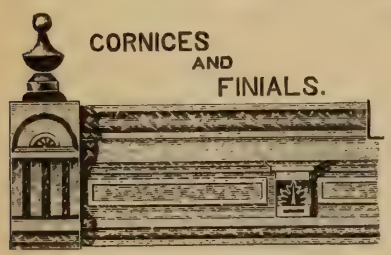
ANTIMONY — Trade is moderate, with prices steady at 11 to 11½c. for Cookson's.

SOIL PIPE—A good trade is still to be noted. The discount is unaltered at 50 and 10 per cent.

PAINTS AND OILS.

The general movement of trade throughout the country is exceptionally good ; in the city, the demand is better than usual at this season of the year. The demand extends to all lines. Turpentine is still stiffening in value, though no advance is noted this week. Linseed oil is firm. White lead is higher in European market, but the local prices keep steady. We quote :

WHITE LEAD—Ex Toronto, pure white lead, $6.12½; No. 1, $5.75; No. 2, $5.37½; No. 3, $5 ; No. 4, $4.62½ ; dry white lead in casks, $5.10.

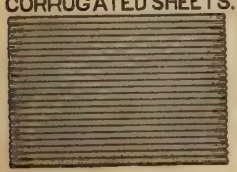


RED LEAD—Genuine, in casks of 560 lb., $4.90 to $5 ; ditto, in kegs of 100 lb., $5.15 to $5.50; No. 1, in casks of 560 lb., $4.75 ; ditto, kegs of 100 lb., $5.

LITHARGE AND ORANGE MINERAL—Litharge, 6 to 6½c. ; orange mineral, 7½ to 8½c.

WHITE ZINC—Genuine, French V.M., in casks, $7 to $7.25 ; Lehigh, in casks, $6.

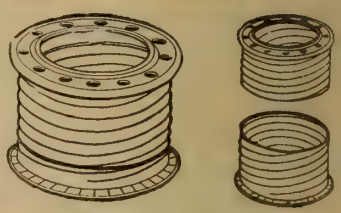
PARIS WHITE—90c.

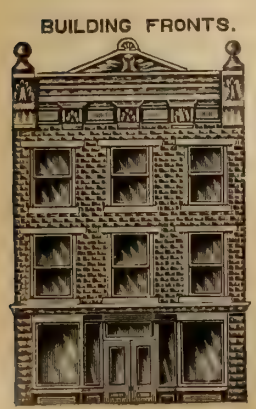


WHITING — 55c. per 100 lb.; Gilders' whiting, 85c.

ROCK FACE BRICK.

PRESSED BRICK.





While we do not claim to be the largest Sheet Metal Manufacturers in the world—nor the oldest—we are pleased to have an opportunity of trying to supply the

Best in the World.

We want you to sample our goods and our methods of doing business. We try to smooth down some of the rough corners, and take a little pleasure out of business, working with our customers for our mutual advantages.

MOST OF OUR GOODS ARE SPECIALTIES.

LINSEED OIL — Outside western points (freight allowed) : Raw, 1 to 4 barrels, 59c.; boiled, 1 to 4 barrels, 62c. Prices in Toronto, Hamilton, London, are 1c. per gallon less.

TURPENTINE — Outside western points, freight allowed, 1 to 4 barrels, 77c.; in less quantities than barrels, 5c. per gallon extra will be added and packages charged for. Prices in Toronto, Hamilton, and London are 1c. less than the above. Terms, net 30 days.

GLASS.

Some import orders of window glass are being delivered this week, and others are on the way. Prices are firm, both locally and in the European market. There is a good demand at present for both plate and ornamental glass. Plate glass is advancing. We quote window glass : Star, first break in 50-foot boxes, $2.15, and in 100-foot boxes, $4 ; double diamond under 25 united inches, $6, Toronto Hamilton and London ; terms 4 months or 3 per cent. 30 days.

OLD MATERIAL

A good demand is noted. Prices are firm throughout. We quote as follows : Agricultural scrap, 55c. per cwt. ; machinery cast, 60c. per cwt. ; stove cast scrap, 45c.; No. 1 wrought scrap, 55c. per 100 lb.; new light scrap copper, 12½c. per lb.; bottoms, 11c. ; heavy copper, 15c.; light scrap brass, 7½c.; heavy yellow scrap brass, 10c.; heavy red scrap brass, 11c.; scrap lead, 2½c.; zinc, 3c ; scrap rubber, 4c.; good country mixed rags, 65 to 75c.; clean dry bones, 45 to 50c. per 100 lb.

HIDES, SKINS AND WOOL.

HIDES -- A good demand continues. Prices are firm. We quote cowhides : No. 1, 8½c.; No. 2, 7½c.; No. 3, 6¼c. Steer hides are worth ½c. more. Cured hides are worth 9c.

SKINS — A stiff feeling is manifested. Lambskins are 5 to 10c. dearer. We quote : No. 1 veal, 8-lb. and up, 9c. per lb.; No. 2, 7c.; dekins, from 30 to 35c.; culls, 15 to 20c. Sheep and lambskins are selling at 45c.

WOOL — There is practically nothing doing, holders and buyers being too far apart for business. We quote fleece at 14 to 14¼c., and unwashed at 8 to 9c.

SEEDS.

Some jobbing in small quantities is being done this week at $3 to $4 per cwt. The deliveries of clover have been light, holders keeping their stock, which was harvested rather late, until all harvesting is over. Dealers are offering $4 to $4.75 for choice to fancy lots of alsike. Extra fancy lots are worth 25c. more.

PETROLEUM.

Business is steadily improving. Prices are unchanged. We quote in barrels, Toronto: Canadian, 14c.; Sarnia prime white, 14c.; Sarnia water white, 15c.; photogene, 15½c.; American water white, 16½c.; Pratt's astral, 18c.

COAL.

A brisk demand is noted at firm prices. We quote : Anthracite for August delivery at Buffalo and bridges : Egg, stove and nut, $4.50 per gross ton, or $4.01 per net ton ; grate, $4.25 per gross ton or $3.79 per net ton.

MARKET NOTES.

Cement is 10c. dearer in carload lots, the price now being $2.60 per barrel.

Tinned sheets are ½c. dearer.

Bar iron has been advanced 15c. per 100 lb.

Wm. A. Ettinger, general merchant, Kennetcook, N.S., has registered consent for his wife Harriet Ettinger to do business in her own name.

SHELLAC.

LAC is produced chiefly in Bengal and Assam. It is obtained from incrustations on the branches of various trees, produced by the insect coccus lacca, which punctures the bark. The incrustation called lac is formed by the female insect, and the bits of branches covered with it are termed stick lac. These bits are gathered and treated with water, which process separates the lac from the twigs and reduces it to the form of small grains ; it is now called seed lac. Shellac is prepared by putting the seed lac into a cloth bag, which is placed over a slow fire ; when the lac inside it melts, the cloth is twisted hard, so that the liquid comes out of the pores of the cloth, and is allowed to drop on a plantain leaf put underneath, or a glazed porcelain trough. The glossy nature of the leaf causes the liquid lac to spread into thin layers, which, when cold, becomes the shellac of commerce. The lower qualities of seed lac are treated in the same way, but are allowed to form thick buttons, and constitute "button lac."

The quality of lac varies chiefly according to the tree upon which the insect feeds. The best lac is "kusum," or lac from the "kusum" tree, next "dhak," then "pipal." The "kusum" is said to last for ten years, while all other qualities are only good for two or three years. The "kusum" lac twigs are of a light golden color, from which orange shellac is manufactured. The other qualities are known as "liver," "native orange," "garnet," etc. Lac is often adulterated with orpiment to impart a fine yellow color, and still more frequently with resin, which it requires experience and careful analysis to detect. In Bengal, lac is gathered twice a year, viz., from the middle of October to the end of January, and from the middle of May to the middle of July. The export of shell and button lac from India is considerably over 10,000 tons yearly.—Boston Transcript.

AMERICAN COW TIES

WILL OUTLAST ALL OTHERS.

This is because the form of the link, the exact size and shape of which are shown above, is such that the wear is distributed evenly over its entire end. The bearing surface is thus very large, and the chain will wear for years without becoming worn appreciably.

With other styles of chain the bearing surface is only a very small portion of the extreme end of the link. Grooves are soon formed, and in a comparatively short time the links are worn—or, properly speaking, cut—through.

These facts are well shown on a cow tie recently brought us for repairs. It was an ordinary No. 00 three chain tie. One chain was wire, the other two American. One of the wire links was worn entirely through. The others were nearly as bad—a strong pull would have broken almost any of them. With the American chains, on the other hand, the wear was very slight, and hardly noticable—three times this amount would not have weakened the chains seriously.

In addition, because of its flat link and smooth surface, American chain is much easier for the neck of the animal than the twisted or wire chain. The American link cannot injure the animal's neck—other styles of link are very liable to.

American Cow Ties are made in all the standard patterns and sizes. They are sold by all jobbers.

ONEIDA COMMUNITY, Limited, NIAGARA FALLS, ONT.

MANITOBA MARKETS.

The 5 New Buildings erected this year on the Toronto Fair Grounds are covered with our Galvanized

EASTLAKE SHINGLES.

This makes a total of **55** buildings on these Grounds alone—protected by EASTLAKE'S.

They were chosen because of their reliable worth.

The many other lines of fireproof building materials we make are equally noted for their practical superiority. Better call at our show-rooms and inspect them if you're visiting the Fair—every Exhibition Car passes our doors.

THE METALLIC ROOFING CO., Limited

Cor. King and Dufferin Sts., TORONTO,

Wholesale Man'frs. Near the Ex. Grounds.

TORONTO FAIR.

The Canada Paint Co. had no exhibit at Toronto Fair last year, but had it not been for the extreme pressure on all their departments this season, in all probability they would have shown one of their very interesting displays next week.

However, it was impossible to give it the necessary time, and if their clients are disappointed at the absence of their name over one of the sections, their disappointment will be somewhat lightened by the attentions which will be shown them by the company's staff, either on the Exhibition grounds or at their office, 90 Bay street. A special invitation is given in our advertising columns to their old customers and also to any dealers who may desire to join the ranks.

WHEN STOCKING UP.

Many a merchant will make the mistake, when starting in business, of stocking up his store with such high-class goods that they are far beyond the means of the people in the community who would naturally be inclined to do their purchasing at his store, says Stoves and Hardware Reporter. Costly stock, while handsome and attractive in appearance, finds no sale among people of average means, simply because they cannot afford to buy it. It has often been observed that, where the merchant starts into business with such high-flown notions of what he is going to do in elevating the standard of merchandise in his community, he is generally compelled by force of circumstances to come down to the prosaic level, and stock up with goods which will meet the needs, wants and finances of his patrons. Sometimes the unsophisticated merchant will allow himself to be persuaded into purchasing such a line of goods, hoping that he will be able to create a demand for them. Now, however attractive and desirable goods may be, or however much people may desire and admire them, they cannot buy them unless they have the money to do so. It is often quite possible for a person to have a will and yet not find the way, if one may be allowed to reverse an old saying. Therefore, the successful dealer is the one who conforms to the wants of his customers.

PERSONAL MENTION.

C. F. Pratt, manager of the carriage trade department of The Sherwin-Williams Co., from the company's headquarters at Cleveland, will visit Toronto during the Fair. He will be accompanied by N. B. Wise, who looks after the interests of the Canadian carriage manufacturers.

A. E. Nichols, hardware dealer, Fergus, Ont., is no longer a bachelor. On Wednesday, August 9, he was married to Janet, the second daughter of Andrew Semple, M.P., Fergus, Ont. HARDWARE AND METAL sends hearty congratulations.

WORK WITHOUT KICKING.

A GREAT portion of the rising generation is growing up with a radically wrong conception of the true spirit of work, says The Chameleon. We are trying too hard to suit ourselves and "kicking" too much when things don't go our way.

We are working much more earnestly for ourselves than for our employers. Our own pleasure and convenience have come to be our most important aim. We consult our own tastes first and the employer's wishes last.

What we need is a little of the spirit of the old apprenticeship days, when immediate self wishes and comfort were downed in service that looked towards the future.

The business schooling that begins with sweeping and window washing graduates successful men. But all that will be soon entirely out of fashion unless we learn to do less faultfinding and more work.

A willingness to do any honorable thing that an employer can ask ought to characterize everyone who wants to rise on his own merits. But, through a false idea of our relation to the employer, we are rapidly growing to be a race of "kickers" and faultfinders. We work too much under protest.

We rarely go ahead in the good, old-fashioned way, doing everything we can the best we can, whether it is what we would like to do or not. We don't accept the conditions under which we have to work without question, or try to make the best of them so long as our superiors see fit to impose them.

We find fault and complain and "kick," and sometimes we strike.

It is all fundamentally wrong. It is not loyal, whole-hearted service, and furthermore it works far more injustice to ourselves than to those we work for. We can never advance or succeed if prompted by such a spirit.

The common-sense mode of life teaches us that patience and endurance are cardinal virtues, and that even though affairs do not always suit our own ideas it is best to put up with them. A little inconvenience or discomfort, a little more work than we get paid for ought not to disturb our peace of mind, and they won't so long as we don't find fault.

It doesn't pay to become restless under minor conditions that are not just to our liking. If we submit to them gracefully and accommodate ourselves to them we are grasping one of the very best helps to success, to say nothing of the time and worry we save.

Did you ever hear of a man "kicking" his way to success? Yet the world is full of men who believe that by faultfinding and "kicking" they are looking out for their best interests.

The true spirit of work, however, eliminates all possible faultfinding and dissatisfaction. It gives men judgment to overlook the annoyances and hardships of the present and see, beyond, the good that is gained by making the best of them.

This doctrine doesn't mean that we should be totally blind to our own rights and let people walk over us roughshod. But it isn't the tendency of the times to allow that.

All our caution is needed to avoid the other extreme, to cultivate less sensitiveness and more forbearance, to look out for our own ease a little less and study the rights of others.

The world needs men who can "kick" less and work more.

CRITICIZING COMPETITORS.

There is one fault to which merchants are too often prone, and that is deriding and criticizing their competitors, says the Stoves and Hardware Reporter. Instead of having a fraternal feeling for them and a generous desire that they may succeed, their chief wish is either to exterminate them or else to injure them in every conceivable way. The method which is most in vogue is to do everything to belittle a competitor's goods, methods of doing business and the general equipment of his store. The writer has known of instances where a prospective purchaser has made some mention to one merchant of the prices or qualities of goods prevailing at another's store, whereupon the merchant began a long tirade descriptive of his competitor's bad methods, general dishonesty and unworthiness. Now, instead of having the effect which the merchant hopes it will, it generally redounds to his own discredit, because such backbiting can only create a bad opinion of the perpetrator of it. As a rule, the listener generally sees the object the merchant has in view in criticizing a competitor. It is done in the hope that he may keep trade away from him, and, if possible, secure it himself. The old motto, "live and let live," is the best which a merchant can adopt. It is another application of the golden rule which cannot be brought to mind too frequently in a keenly competitive age like the present one, where men are jostling against one another and knocking each other down. It is far better to ignore competitors a little too much than to go to the other extreme and brood over their actions, grow jealous of them, and in watching them forget your own business.

SECRET OF GOOD TEMPER.

Not long ago, says a writer in an exchange, I was talking to a prosperous business man who was verging on middle age, but he looked so young and well and in such good spirits, notwithstanding the fact that he was a hard and conscientious worker, that some curiosity was aroused as to how he had prolonged his youth. His explanation was that he never worried, and that he left his business at the store, or, in other words, that he did not think or worry about it after he left it. Though by no means the secret of his success—for it is quite possible for a man to do all this and never rise very high—it did, in a measure, account for his cheerfulness, zest, earnestness and the fresh zeal which he brought to his work every day. It is possible, by thinking and pondering too much after business hours about knotty problems and difficulties which have arisen during the day to develop a harassed expression, make the brain weary and bring about a general irritability which reacts detrimentally upon both customers and clerks. It is certainly very depressing for everyone who comes in contact with the merchant who is prone to worry too much and who generally makes it a point to vent his spleen upon someone else's unoffending head. When people enter a store they do not want to be glared at as if they must buy whether they want to or not. Nor are they particularly edified by exhibitions of bad temper. And if a merchant is not careful this is just what he is apt to do, if he allows himself to worry too much and fret about trifles. Many of the things which he allows his mind to dwell upon are insignificant in themselves and will soon pass away if undue importance is not given them.

Raymond & Fils, general merchants, St. Anne de Beaupre, Que., have dissolved. The business will be continued by Jas. Raymond under the style of Raymond & Cie.

TENDERS FOR STEAMSHIP SERVICE.

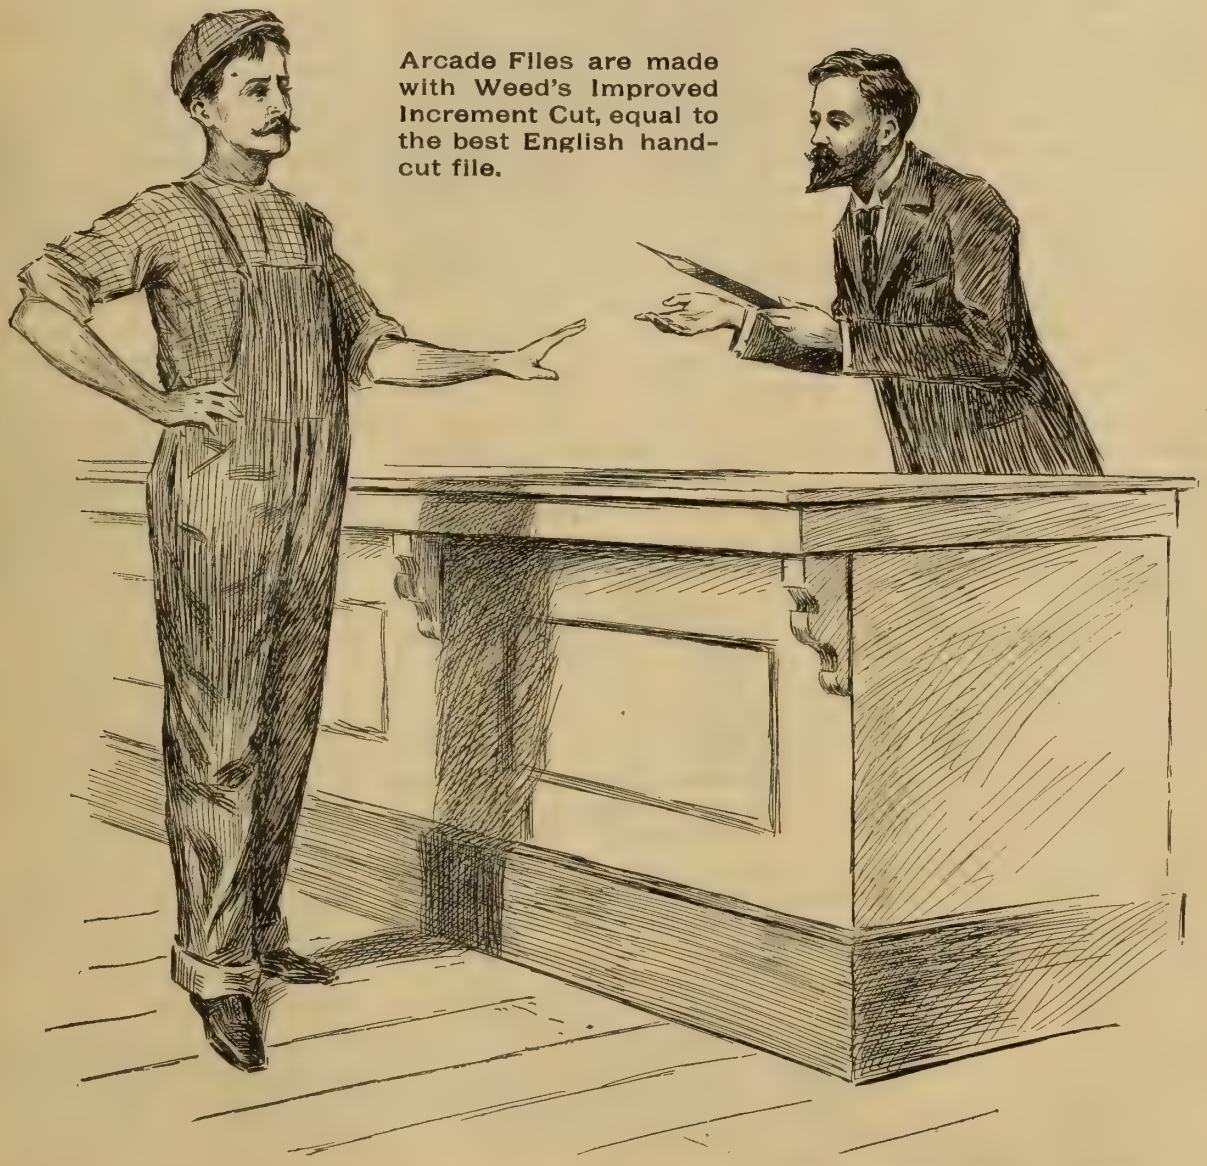
SEALED TENDERS, addressed to the undersigned, at the Department of Trade and Commerce, Ottawa, marked "Tenders for Steamship Service," will be received until the 15th day of September next, for steamship service, including the carrying of Her Majesty's Mails for a period of five years, for the following:

The service to be during the winter season, say from between the 15th November and 1st December in the fall to the 1st of May in the Spring. Three full round trips per week, making in all not less than sixty full round trips between Murray Bay on the North Shore and St. Denis on the South Shore on the River St. Lawrence.

Tenders must state the class, engine power, speed, capacity, passenger and other accommodation, etc., of the vessel proposed to be employed, and must show to the satisfaction of the Minister of Trade and Commerce that the vessel offered is capable of fulfilling such conditions as may be imposed.

The Government does not bind itself to accept lowest or any tender.

W. G. PARMELEE,
Deputy Minister of Trade and Commerce.



Department of Trade and Commerce,
Ottawa, 18th August, 1899. 361

HEATING AND PLUMBING

ENGLISH VIEWS ON THE APPRENTICESHIP OF PLUMBERS.

J. WRIGHT CLARKE.

ARE technical trade classes of real advantage to young men? Most emphatically, yes! To the student who attends for a short time, or only for one session, little advantage is gained; but to those who are earnest and attend two, three, or four courses of lectures, and are taught to think for themselves, the benefit is incalculable and far reaching. One disadvantage, if it can be considered as such, is that many of those who are the best students, and make the best progress in the technicalities of the craft, soon leave the ranks of the journeymen and obtain higher, better paid, and more constant positions, with easier hours of working. Even those who remain in the ranks benefit by being able to command more regular employment.

A marked difference, too, is noticed, in the young students, especially between their appearance when they first join and after they have attended for some time. By simply drawing their attention to the fact that dirty hands, with which lead may probably be mixed, is injurious to their health, they become cleaner in their persons and dress, and this leads to an improvement in their general tone and manner. But for the classes many young lads would loiter about in the streets and contract habits difficult to eradicate afterwards. In the classes they not only learn something useful, but matter for reflection at other times when not attending.

In the technical classes, they are not only taught the sciences which underlie the craft, but also to reason for themselves, so that they are less liable to drift or blunder into making mistakes in their work. They are also taught "to finish a job before they begin it," in other words, to make drawings so that the whole of a job, or a section of it, can be seen at a glance. This leads them to set out their work by chalk lines on the bench or floor on their jobs, by which there is less waste of material when cutting out; bends in pipes can be shown to the right sweeps, or radii, to suit their intended positions; and joints to come in easy positions for making and also properly spaced, instead of being jumbled together to present an ugly appearance. They also learn the general principles of construction of the many appliances that they fix, so that they can adjust or repair them when called upon to do so. By practice, their arithmetic and penmanship improve considerably. The higher grade students are taught the principles of sanitary science and their application without which skilled workmanship is of doubtful value.

In the practical classes, small specimens of actual work are made, and the students encouraged to do one thing perfectly before attempting another. Even the importance of each blow given by a tool is impressed upon them, so that their strength and energy are not wasted or applied in a useless manner.

In many cases, the young students work in the daytime with indifferent workmen, whose mannerisms and unskilled ways they copy, and the teachers find some difficulty in eradicating some of these abuses and teaching better methods. Taken altogether, the classes are of great value to young plumbers, as they learn at them a great deal which they cannot possibly do in their daily work. But, to those not so working, the classes are of more than doubtful utility.

CAN TRADES BE LEARNED

at polytechnics better than by apprenticeship? Not in evening classes. To become a skilled craftsman constant and daily practice and a variety of work are essential. In classes, only small specimens can be made, and the work is all done on benches under much more favorable conditions than can be obtained in general practice. It is possible only to work on what may be termed detail specimens, and large pieces cannot be handled in a class room in which there are several students. But it is detail that the young students require, as they will then be better able to execute larger works when they arrive at an age when they will be called upon to do so. In fact, it would be a mistake to give young students work which only skilled artizans who have had several years' experience could successfully accomplish. And again, the classes are held one evening of two hours each for about 30 weeks in each year. This gives a total of 60 hours, which, when compared with the usual working year of, say, 48 weeks at 47 hours per week, appears to be very small. Even if a student attended the classes for six years, the hours would amount to only about 360, so that it is impossible to attain sufficient skill to become a thoroughly practical plumber by the aid of the classes alone.

The foregoing remarks may appear to detract from the value of evening classes, but it must be remembered that the latter are not intended for teaching trades in their entirety; in fact, this is impossible for reasons already given. But they are most valuable as auxiliaries to apprenticeship, as so much that is necessary to know, and which cannot be learned in the ordinary way, is taught them.

By their means a man is taught to be a man who, by his attained intelligence, is far and away superior to the beast of burden whose only guide is a whip and reins; or a piece of machinery which can only do the special work for which it is designed and constructed.

Many men are content to trudge along and have no desire to improve themselves or raise their positions in life. But there are many others who have higher aims and ambitions, who wish not only to elevate themselves, but their craft also, and by helping such men the whole community benefit. This being the case, the money spent in endowing polytechnics and science schools must return with interest into the nation's purse.—Plumber and Decorator.

TORONTO BUILDING PERMITS.

Permits have been issued in Toronto to L. P. Stewart, for a two-storey and attic brick residence at 84 Delaware avenue, to cost $2,800; to The J. D. King Co., Limited, for two attached storeys to their factoryat 122 and 126 Wellington street, to cost $7,000; to John Denny, for a pair of two-storey and attic brick residences on Stewart street, near Bathurst, to cost $4,000; to Dr. A. McPhedran, for a two-storey and attic brick dwelling at 151 Bloor street west, to cost $9,000; to P. E. Black, for a pair of roughcast dwellings near Bathurst street, on Niagara, to cost $2,000.

PLUMBING AND HEATING NOTES.

Lamarche & Benoit have been appointed curators of F. Duclos, plumber, Montreal.

Unusual building activity is reported at Winnipeg at present.

THE MARITIME HARDWARE ASSOCIATION.

The first annual meeting of the Wholesale Hardware Association of the Maritime Provinces was held at Digby, N.S., on August 10 and 11. The association itself was really organized in April last, and is composed of the wholesale hardware houses of St. John, N.B., Halifax and Yarmouth.

Messrs. W. H. Thorne and J. J. Barry, both of St. John, are president and secretary respectively of the association.

The object of the association is to bring the wholesale hardwaremen of the Maritime Provinces into close touch with each other and to remedy trade grievances which may arise from time to time.

SEND for specimen copy of Phillips' Monthly Machinery Register, containing over 5,000 entries of new and second-hand machinery of every description. The oldest established and most successful medium in the world. Established 25 years for the purpose of introducing those who have machinery for sale, to those who wish to buy, has a circulation of about 50,000 copies per annum, all over the world, and is used for continual reference by a large number of firms. It is consequently a most valuable advertising medium for all engineers and manufacturers. Subscription, 6s. per annum, price per copy, 6d. Sole Proprietor, CHAS. D. A HINT TO EXHIBITORS.

Merchants or manufacturers intending to make exhibits at any of the various fall fairs should make a careful selection of fixtures to be used. The space generally allotted is so limited that good fixtures are a great aid to ingenuity in making a display effective. When even common lumber is used to fit up a temporary structure, the expense entailed is generally considerable. Therefore, the adjustable show and display tables, which are becoming so popular for store display, should prove of much value. These are fitted with automatic spring locks, so are easily adjusted to several angles, so that one's display could be frequently changed. Unlike the temporary structure, the value of these tables is not ended with the close of the exhibition. They are made in several different sizes and colors by Boeckh Bros. & Company, Toronto. The sale of these tables has grown so largely that this firm recently found it necessary to make an addition to their present premises at 88 York street, Toronto. A booklet, with illustrated description of these tables, can be had upon application to this firm.

FROM ERRAND BOYS TO PEERS.

There are no better examples of individuals who have fought their way to fame and fortune than the cases of Lord Mount Stephen and Lord Strathcona, who have each risen to the highest point of eminence from the humblest prospects. The former began life as an apprentice to an Aberdeen draper. After further experience in a London shipping-house he emigrated to Canada, and joined his cousin, who was in a dry goods business. This marked the turn in the tide of his fortunes, for he quickly became manufacturer, bank president, and then pioneer of the Canadian Pacific Railway. Lord Mount Stephen's charity is as boundless as his wealth.

Lord Strathcona began life as an errand boy in an obscure Scottish village, emigrating to New York. A few months later he worked his way up into Canada, and eventually entered the service of the Hudson's Bay Company, then at the climax of its power and prestige. Beginning at the very bottom of the ladder he forged his way up to the very top. The knowledge he obtained of the capabilities of Canada was immense. At the moment when the construction of the Canadian Pacific Railway seemed in danger owing to the hesitation of capitalists and of the Dominion Government to contribute towards the undertaking, he came forward with Lord Mount Stephen and a few friends, and guaranteed the whole of the capital required for the line, thus assuring its creation and success. They richly deserve the distinction of being styled Canada's pair of "Grand Old Men."—Scottish American.

The "SAFETY"

ACETYLENE GAS MACHINE

manufactured by

The Safety Light & Heat Co.
DUNDAS, ONT.

What some of our friends say of us :

Dear Sirs,—The 10-light Safety Acetylene Gas Machine purchased from your Mr. Sparling has been in use in the office, composing and press rooms of the Vernon News since the beginning of the year, and it is giving excellent satisfaction. The light is clear, strong and much easier on the eyes than other forms of artificial light, and is admirably adapted for our purpose. The machine is easily operated and requires little attention. The automatic device for removing the ash from the carbide works to perfection. We find that there is no overgeneration of gas and consequently no waste. The ash is always dry when removed. Considering the volume of light we find it more economical than coal oil, and we can confidently recommend the Safety generator as a very excellent machine.

JOSEPH RODGERS & SONS Limited

SHEFFIELD, ENGLAND.

Each blade of our Goods bears the exact mark here represented.

JAMES HUTTON & CO., MONTREAL SOLE AGENTS IN CANADA.

CURRENT MARKET QUOTATIONS.

August 25, 1899.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

...BRADSTREET'S...

Capital and Surplus, $1,500,000. Offices throughout the civilized world.

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying, and promulgating information, no effort is spared and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world. Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by respectable and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its Offices. **Correspondence invited.**

MONTREAL PRICES ON IRON PIPE.

MONTREAL at present is the cheapest market in the world for the purchase of iron pipe, for, while the feeling generally is strong, and prices elsewhere are tending upward, jobbers in Montreal are still quoting figures which are below the regular market value.

For instance, one-inch black pipe is still selling at $5.20 in Montreal, when it could not be imported under $8.75, the net cash price in the States being 6⅓c. per foot.

As a result of this condition, some jobbers have felt disposed to take advantage of the strength, and are asking rather higher prices this week. But, as some of the largest handlers are still quoting on the old basis, we retain it in our regular market quotations.

The two scales compared show a difference of from 10 to 48c., as will be noted:

Black pipe	New scale.	Old scale.
⅛ to ⅜ inch	$ 3 25	$ 3 12
½ inch	3 40	3 25
¾ "	3 85	3 75
1 "	5 25	5 20
1¼ "	6 90	6 85
1½ "	8 65	8 75
2 "	11 50	11 02

HEAVY MATERIAL ADVANCING.

The upward tendency of values at producing points in the United States continues unabated in heavy material.

Notable changes this week are a further rise of $1.50 per ton in billets and slabs at Pittsburg to $37 to $38, the same goods selling this time last year at $16 per ton, or over 50 per cent. less money.

Sheet steel bars have had a still sharper jump of $1 to $3 per ton, now standing at $39 to $40, as against $18.10 for the same time in 1898. Ferro manganese has leaped a clean $10 on the week to the even $100 at Pittsburg, while an advance of $1 per ton is asked on old iron rails, and $4.50 per ton on old steel rails at the same point, the figures being $22.50 and $20.50, respectively.

This steady advance in the cost of old material shows what straits makers are put to to procure supplies of furnace material.

ADVANCE IN "GLOBE" FILES.

Files and rasps manufactured by The Globe File Mfg. Co., Montreal, have been advanced 10 per cent. in price, and the fixed discount to the retail trade is now 60 and 10 to 70 per cent.

The firm has been induced to make the change on account of the increased cost of labor and raw material.

INCREASED COST OF COIL CHAIN.

While values have been steadily advancing at producing points, the jobbing basis on coil chain has been maintained at the old level, especially in Montreal, where several houses are still selling at unchanged prices. That they will continue to do so for any length of time, however, is unlikely, for the reason that it would cost a material advance to import fresh supplies.

In fact, based on the increased cost, the selling basis on coil chain should be as follows, compared with the old, and it is likely to be before the new week begins:

No.	New Scale.	Old Scale.	Rise.
6	11¾	10¾	1
5	10¼	9¼	1
4	9¼	8¼	1
3	8¼	7¼	1
¼ inch	$7 00	$6 00	$1 00
5-16 "	5 75	4 75	1 00
⅜ "	5 25	4 25	1 00
7-16 "	5 10	4 10	1 00
½ "	5 00	4 00	1 00
9-16 "	4 50	3 95	55
⅝ "	4 25	3 85	40
¾ "	4 15	3 65	50
⅞ and 1 inch	4 10	3 55	45

DISCOURAGEMENT IN BUSINESS.

Dissatisfaction is not a bad quality. On the contrary, when present in a moderate degree, it is beneficial.

When a merchant or a clerk is completely satisfied, he is no longer ambitious to improve his business or his condition. And, like an engine without steam, he comes to a standstill. Next stage is decay.

But excess of dissatisfaction produces discouragement. And then, instead of being impelled forward, most men experience the opposite results.

Ever aim to reach a higher notch—to make your business or your position better. "If at first you don't succeed, try, try again," as an old maxim has it. You may not reach all the notches your eye is upon; but, by trying, you reach those you otherwise would not.

TEN YEARS OF TINPLATE IMPORTS

THERE is probably nothing more interesting in commercial history than the extraordinary effect the Customs tariffs have had upon the importation of tinplates into the United States. We have reached this conclusion after perusing figures recently issued by the Bureau of Statistics, Washington, giving the imports of tinplates for the past 10 years.

The following table shows the imports of tinplates into the United States in quantities and values :

Year.	lb.	$
1890	680,060,925	20,928,150
1891	1,036,489,074	35,746,920
1892	422,176,202	12,315,562
1893	628,425,902	17,565,640
1894	454,160,826	11,969,518
1895	508,038,938	12,144,080
1896	385,138,983	8,950,656
1897	230,073,683	5,344,638
1898	171,662,345	3,809,148
1899	108,484,826	2,613,564

The large quantity imported in 1891 was due to the heavy importations made prior to the going into force of the McKinley tariff. The figures for 1890 were normal for the years preceding the high tariff on tinplates. Although the McKinley tariff went into operation in October, 1891, the clause putting the high duty on tinplates did not go into effect till July 1, following.

The rate fixed by the McKinley bill was 2 1-5c. per lb. In 1894 the Wilson tariff reduced the duty 1c. per lb., making it 1 1-5c. per lb. But when the Dingley tariff came into operation in 1897 the rate was slightly increased, being fixed at 1½c. per lb., where it still remains.

The development of the tinplate industry in the United States is reflected in the multiplicity of mills as well as in the falling off in the imports of foreign plates, for a year ago it was the opinion among those who were qualified to speak upon the matter that the industry had reached a stage where overproduction was not far distant. That, for the time being at any rate, has apparently been postponed by the formation of the American Tinplate Trust, which now controls the output of tinplates in the United States.

IMPORT ORDERS OF GLASS.

There is a steady, though moderate, arrival of window glass for delivery at Canadian points. Some jobbers, however, have been unable to secure any shipments at all, so far. It is generally expected, however, that all deliveries will be made before the close of navigation.

As a general rule, the first deliveries of import orders are made soon after the opening of navigation and the last of them before July 1.

Though the strike in Belgium somewhat curtailed the production, there can be no question, judging from the way prices have stiffened and the difficulty that has been experienced in getting orders, that the demand from the world in general has been very much in excess of the demand of previous years. Canada gave her share in the increase of orders.

WIRE NAILS FIVE CENTS DEARER.

STILL another advance in the price of wire nails is announced. It is, however, only a modest one of 5c. per keg.

The price f.o.b. Toronto, is now $2.87½ per keg for carloads and $2.90 for less than carloads.

The price, however, is still below the parity of the American market, duty considered. For instance, according to Iron Age, of August 24, the price f.o.b. Pittsburg was $2.75 per keg to retailers in less than carload lots. This, with the Canadian duty added, would mean $3.35 without considering freight.

Iron Age, of the issue already referred to in commenting upon the wire nail situation, said : "The tone of the market is very strong, and, in view of the rapidly advancing prices for raw material, still higher prices for nails are probable. It is pointed out that rods are close to $45 per ton, and, as only 21 kegs of nails can be made from a ton of rods, the cost of the rods alone is all of $2 per keg, which leaves only 50c. for drawing the wire and cutting the nails."

According to advices received in Toronto just as we go to press, the price of plain wire, galvanized, plain twist and barbed wire has been advanced $2 per ton, making quotations f.o.b. Cleveland $3 per 100 lb. for barbed and plain twist, and $2.75 base for plain wire. The usual rebate on carload lots at one shipment brings the price 10c. per 100 lb. less. Whether wire nails have also been advanced we are unable at the moment to ascertain. They probably have.

TIMELY WINDOW DISPLAYS.

Now is the time to make displays of guns, rifles, ammunition, etc. The open season for shooting ducks started yesterday, September 1. This will keep the sports busy until the deer season opens in a few weeks.

It is reasonable to expect that sportsmen will spend more money than usual this year, so it might be well to make a special push with their requisites this year. A good display was to be seen this week in the stor of a Toro nto retailer. At the back of the window were four small kegs, each keg containing a separate brand of powder. Two rows of guns and rifles were arranged along the side of the window. In the centre space were blank cartridges, powder flasks, bags of shot, and miscellaneous articles and material such as are used by sportsmen. Most of the smaller articles were ticketed at close prices.

Another good display is made by a shrewd King street dealer. Recognizing the fact that a great many Exhibition visitors are likely to notice a good display in his window, he has one window arranged as a stand with steps rising from the front and the doorway side towards the back wall corner. On this he has displayed cutlery, snaps, rules, etc. These are all small articles which could be carried away in the pocket. As they are all price-ticketed, and are goods that nearly everybody has use for, many sales are made from their display. This would be worth trying during the fall trade.

It is an established custom in this latter store that, while goods are being wrapped up for customers attracted by a window display, the clerk draws attention to one or another of the good values offered at the time.

DELEGATES TO THE MARITIME BOARD OF TRADE.

Through some inadvertence, the names of the Kentville, N.S., delegates to the Maritime Board of Trade, published in last week's issue, were ascribed to Halifax, while the names of the Halifax delegates did not appear in the list at all. The Halifax delegates were Messrs. J. E. De Wolfe and C. M. Creed. In the report of the proceedings, however, the names of the delegates appeared as they spoke upon the various questions which came up for consideration.

THE PRICE OF CANADIAN VS. U. S. STOVE BOLTS.

HARDWARE AND METAL a few weeks ago pointed out in an editorial article that the prices of screws of Canadian manufacture were below those ruling in the United States. The same might be said of flat head stove bolts, only in a more marked degree.

Taking, for instance, the most salable sizes, namely, 3-16x¾ and ¼x1 inch, we find there is a difference in favor of Canadian made flat head stove bolts of 22 per cent., without taking into consideration the duty, which is ¾c. per lb. and 25 per cent.

Here are the two lists given in comparison :—

Length.	5-32 Inch.		3-16 Inch.		7-32 Inch.		¼ Inch.		5-16 Inch.		⅜ Inch.	
	Can.	U.S.	Can.	U.S.	Can.	U.S.	Can.	U.S.	Can.	U.S.	Can.	U.S.

6½ "	..	..	1 75	1 90	....	....	1 80	2 00	2 20	2 50	4 00	4 55

The discount off the Canadian list is 60 and 10 per cent. and off the United States list, according to a recent change, 65 per cent.

In regard to round head stove bolts the prices are practically the same in both countries.

U. S. FILES 10 PER CENT. HIGHER.

Jobbers in Canada are in receipt of circulars from the manufacturers in the United States announcing an advance of 10 per cent. in the price of files and rasps. The circulars state that on and after date of notification all orders received will be charged 10 per cent. advance on the gross list, and this amount will be subject to the same discount as before.

It is expected that the makers will shortly issue a revised list, but in the meantime they are adopting the present method of getting higher prices.

YALE GOODS ADVANCE.

Night latches, store door locks, Yale blanks, and some other lines have been advanced in price by The Yale Lock Manufacturing Co. of New York. The advance is about 20 per cent.

ADVANCE IN STOVE PIPES.

An advance of 50c. per 100 lengths has been made this week in the price of stove pipes. Quotations are now as follows : 5 to 6 inch, $6.75 ; 7 inch, $7.25 per 100 lengths.

SMALL TOOLS DEARER.

Manufacturers in England of small tools have notified their agents in Canada of an advance of 5 per cent. in prices. The reason they advance for the higher figures is general increase in the cost of raw material.

AN EMBRO HARDWAREMAN.

Mr. William J. Geddes, hardware and tinware merchant, Embro, Ont., is in Toronto this week, chiefly for the purpose of visiting the Exhibition.

"Trade is good," he enthusiastically said, "and particularly in tinware."

In referring to the upward tendency of prices in hardware, Mr. Geddes stated that he had not only bought wire nails when the price was low, but that he had followed the market in his selling price. "But there are no good profits in binder twine like there were last year," he added, "and it will probably be a good many years before there are."

PUSH THE BEST GOODS.

EVERY hardwareman should keep in his store low-priced as well as high-priced goods, but where some make the mistake is in bringing the former forward as a substitute for the latter.

It is the high-priced goods that give, as a rule, the best satisfaction to the purchaser, and also the best results to the seller. Naturally, therefore, these are the goods which should be pushed. That they are not always is well known.

Time and again, when a customer asks to see a certain line of goods, the clerk will submit the cheapest line there is in the store, instead of beginning with the highest-priced and working down to the lowest, if necessary.

While every man must use his own judgment, it is not wise to suppose from appearances that the cheaper the goods the better they will suit the customer. Unless the customer asks for the lowest priced article in a certain line it is the wisest thing, as a rule, not only to offer the best, but to show why it is the best. But, of course, if it is the cheapest that a customer will have, it is unwise to be overpersistent in pushing forward the high-priced article.

WHITE ENAMELED WARE DEARER.

Enameled white ware has gone the way of a great many other lines appertaining to the hardware trade, the manufacturers having this week announced an advance of about 5 per cent.

The discount is now 50 per cent. instead of 50 and 5 per cent.

While other lines of enameled ware are unchanged, quotations are naturally firmer in sympathy.

ADVANCE IN STOVE RODS.

Stove rods, like stove bolts, are higher, there having been a general advance in prices. The ruling quotations are now 5½ to 6c. per lb.

The demand for stove rods at the moment is exceedingly good.

LIGHTING BY ACETYLENE.

By Fred D. Johnson.

ACETYLENE is a nearly pure hydrocarbon, giving in combustion about 13 times the intensity of light produced by coal gas and consuming about one-seventeenth the volume of oxygen required by the latter. In its spectrum it approaches sunlight more nearly than any other artificial illuminant known, and, therefore, gives a diffused light, free from hard shadows, and does not falsify colors.

Acetylene has been in general use for over three years, and from Norway to South America. Its first exploitation, in the 80's, was in its liquid form, under a pressure of from 600 to 700 lb. per square inch, and resulted disastrously ; but Wilson's discovery of the means of producing its base, calcic carbide, at a commercially practicable cost was too valuable to lie fallow. Persistent experiment in Germany, France and England, as well as in the United States, soon demonstrated the fact that the gas was harmless enough, except under very high pressures. It was further shown that the best method of utilizing the new illuminant was to generate it only as used ; consequently storage, and therefore compression, was abandoned. Acetylene mixed with oil gas is now extensively used in Germany, under a pressure of 60 lb. per square inch. It is also used by the Canadian Pacific Railway unmixed.

SEVERE TESTS BY PINTSCH.

To determine once for all whether acetylene could be exploded under even extreme conditions, the Messrs. Pintsch, of Berlin, whose system of compressed gas-lighting is is in use on nearly all first-class railroads in this country, tried the following interesting and conclusive experiment :

The corrosion of certain metals by acetylene, notably silver, copper, and their alloys, it was alleged, would form acetylides that were dangerously explosive. The Messrs. Pintsch filled five cylinders with gas at from 135 to 150 lb. pressure per square inch, two with acetylene, two with acetylene and coal gas, and one with acetylene and oil gas. Strips of the proscribed metals, between wood blocks to prevent contact, were placed in each and a little water added, to help along the anticipated corrosion. These cylinders were exposed upon a shed roof from April, 1895, to July, 1896. They were then taken down and submitted to hammering and roasting, but without result. When opened, no acetylides were found. There was but a slight corrosion, due wholly to ammonia, which is present in all illuminating gases. So much for corrosion.

A STATEMENT BY AN AUTHORITY.

Prof. Vivian Lewes, Chief Inspector of Gas for the Corporation of London, and Professor of Chemistry at the Royal Naval College, Greenwich, England, says that the action of acetylene upon brass and copper may be safely neglected in practice, and that no danger accrues from the use of the ordinary fixtures. The same eminent authority stated, in a recent lecture before the Society of Arts, London, that the calcic carbide now produced is so nearly pure that the most noxious of its impurities, phosphureted hydrogen, is found only in an infinitesimal percentage. This and sulphureted hydrogen and ammonia are the only impurities that we need consider, and, as their united volume is only one part in 500, they are not very formidable.

TOXIC PROPERTIES.

The toxic properties of acetylene are chiefly due to the above impurities and are less dangerous than those of coal gas. Their presence is manifested by an offensive and pungent odor, by which leaks are readily detected. Aside from this the volume of acetylene required to produce a light equivalent to that of coal gas is so small that its presence in a room is discovered long before enough has escaped to be a source of danger in any way.

One 25 candle-power light, were the burner left open, would take 2,000 hours to entirely replace the air in a room 10x10 feet, and 60 hours to add enough gas to the air contained in such a room to ignite very feebly. The would-be suicide would starve to death before asphyxiation came to his relief.

CALCIC CARBIDE.

Calcic carbide, from which acetylene is released upon contact with water, is a hard crystalline substance, much resembling coke, but heavier. It is produced by the fusion of lime and carbon (coke) in an electric furnace. The largest plant in the United States is at Niagara Falls, which has a capacity of 200 tons a day. Other plants in the United States and Canada, England, Germany, France, Spain, and even Bosnia, are doubling and trebling their capacities ; the aggregate investment being over $20,000,000.

It may be seen from this that the experimental stage is long past. The industry is simply a development of electrical science whereby more light is produced from a given weight of coal than by any means before employed.

Acetylene is set free from calcic carbide in the proportion of about five cubic feet of the gas to 1 lb. of carbide, the maximum possibility being 5.6 feet per lb. This may be effected in several ways, but for various technical reasons the plan in almost universal practice is to place the carbide in a tight vessel and feed the water to it through a valve controlled automatically by the rise and fall of the gas-holding tank or gasometer.

GENERATORS.

A generating apparatus consists of the generator proper, the gasometer or reservoir, usually proportioned to contain about one hour's supply, and an intermediate purifying and condensing chamber. There are innumerable patents and almost any tin shop makes some kind of a "gas machine." Here lies the danger.

Certain conditions are indispensable to an efficient and safe apparatus and they are perfectly simple and easily understood. It will be readily seen that they are also absolutely imperative, both for safety and economy.

1. Since a high pressure is to be avoided, and is entirely unnecessary, the apparatus should be so designed that a maximum of 3 inches water gauge, equal to about 1-10 pound pressure (Lewes gives 20 inches as a maximum) should never be exceeded, or if it is shall be promply relieved without the intervention of purely mechanical devices.

2. The generator must never be closed against the reservoir and atmosphere at the same time ; it must be open to one or the other. Its means of communication with the air should be through a vent pipe, which may be used in common with that from the reservoir.

3. The communication between the generator and reservoir must be open in one direction only, from generator to reservoir, and automatically closed in the reverse direction.

4. As there is always an after-generation of gas, due to condensation of surplus water vapor, the water feed should be cut off the instant that the reservoir begins to rise ; for this is the point at which more gas is beginning to be liberated than is being consumed at the burners. The heat evolved in the generation of gas vaporizes the water, part

WIRE NAILS
TACKS
WIRE
Prompt Shipments
The ONTARIO TACK CO.
Limited
HAMILTON, ONT.

of this vapor being carried off by the gas and removed by the condenser, and part, being left in the generator, condenses there, reacting on fresh carbide. This process is repeated so long as any moisture remains in the generator. The reaction is quite sufficient to leave a small reserve in the reservoir after consumption has ceased, even when the water supply is cut off, as above noted, at the beginning of the overproduction.

5. The apparatus must not be dependent on soldered joints and must be so constructed that it will withstand a high temperature without developing weakness. A temperature that will melt solder, 360 deg. to 475 deg., will not decompose acetylene and might easily be reached in case of a nearby fire which would not necessarily be dangerous to a riveted, screwed or clamped joint. Acetylene requires an admixture of an equal volume of air to ignite at 832 deg., and a properly-constructed tank full of it might easily withstand a much higher temperature without resulting explosion.

6. For the foregoing reason care must be taken to prevent the presence of air in the apparatus in sufficient proportion to support combustion.

7. Generation may be very rapid under some conditions, as when lights are first started in large number. For this reason the piping forming connections between the generator and condenser, reservoir and vent system should be of large calibre, much in excess of the theoretical requirement based on consumption per hour. The above conditions are easily attainable, but cannot be obtained without careful study in designing and the unstinted use of good material and careful workmanship in construction.—The Metal Worker.

BRISTLES.

The Siberian bristle industry has been seriously affected, because the majority of those firms engaged in manufacturing the product are badly crippled on account of the scarcity of labor. To such an extent has that industry been interfered with that it is said this year's output will be less than two thirds of the normal. This opens up to the American hog a destiny beyond lard, bacon and ham. For years, Russia or, rather, Siberia, has been the home of the hog that produces the great "okatka," the bristle from which brushes are made. Next year's collection of the raw bristles will be less than one half of the usual quantity, and as the tendency of late years in the brush trade has been towards the use of higher grades of goods, and as almost 80 per cent. of this class of goods comes to the American market, the price cannot fail to be affected.

ADD TO YOUR EXPERIENCE.

There may be something better than the paint you are selling—something that will sell better and please the customer better. Have you ever tried to find out?

Do so, if you want to make the most of your paint business. Add to your experience all there is to be known about the various paints and painting materials on the market.

We have done the very same thing in our paint-making, and in that way we know to a certainty just how

THE SHERWIN-WILLIAMS PAINT

compares with every other paint. When we say that it covers **most,** looks **best,** wears **longest** and is **most** economical, we know it is all true. Our experience gives us this assurance.

It is the experience of our agents that S.W.P. sells better than any other paint, because it gives the consumer greater satisfaction, and because we push it better. Your experience would be the same.

GLASS IN ENGLAND.

It is not generally known, says an exchange, that the art of glass making was introduced into England through the importation of French workers, who were employed to make the first glass in England for the windows, porches and upper chambers of the ancient church of Monkwearmouth, which is situated on the river bank, opposite Sunderland.

About 1,500 years ago a philanthropic man by the name of Bishop, surnamed Benedict, commenced building a monastery on the bank of the river Wear in honor of St. Peter. He was assisted in his great work by the then King of Northumbria, who also gave him the ground upon which to build. Benedict went to France, where he obtained stonemasons to erect a church for him after the style of the Romans. From France he also procured glassworkers, who manufactured all the glass required for use in this structure. Before glass was used, a slit or hole in the wall served for the purpose of admitting light.

The good Benedict, who spared neither pains nor expense on this beautiful and interesting place of worship, journeyed several times to Rome—a difficult thing to do in those days—to obtain fittings for the church. He brought back many very fine pictures, and a number of other magnificent works of art, which he placed in this wonderful edifice. To-day, Monkwearmouth Church is one of the greatest ecclesiastical curiosities in England.

NO NEED FOR ALARM YET.

The discomfort caused by the sun during the heat of the summer months naturally turns a good deal of attention towards that luminary, and it is not surprising, therefore, that this is the season for wonderful inventions involving the utilization of the sun's rays. A brilliant mind in Detroit has, according to a local paper, devised a system whereby all cooking can be done by the heat of the sun. The headline to the article states that it will develop 200 degrees of heat, and if this is so it is hard to understand, says the Metal Worker, how the inventor will do a simple thing like boiling eggs, which requires 212 degrees. The stove trade is not in position to become unduly alarmed over anything just at present, and we do not anticipate that this recent invention will shut up many foundries. As a matter of fact the power of the sun was long ago utilized, and there is a story, whether historical or apocryphal we do not know, about Archimedes, of Syracuse, who, by means of reflecting mirrors, cooked the goose of a certain Marcellus, who had designs against his native city.

WINDOW-GAZERS EARN MONEY.

"MODERN conditions, needs and competition, develop many queer pursuits," said the State street merchant. "The business of c rrying signs about the streets—'sandwiching,' it is called—is a century old. Merchants used to advertise their goods, you know, by hiring a man to go about ringing a bell and crying the wares of his patrons. That is one of the street noises we have lost. I sometimes think it would be a good scheme to revive it. It would pay while its novelty lasts. The queerest profession of all professions, I think, however, is the profession of window-gazer. All pursuits are 'professions' these days, as you are aware. We haven't any 'trades' left. Never heard of of a window-gazer?

"There are many in Chicago, and, although they don't get rich, they are paid enough to keep body and soul together. A window-gazer, as the name implies, is a man or woman who makes a living by gazing into a window. You know that if you stand in State street, look fixedly at the 12th storey of a building across the way, you will have a sidewalk blocking crowd about you in no time at all? Well, that is what the window-gazer does. He strolls casually along until opposite his employer's window. Then he stops, and gazes with an appearance of deepest interest. In five minutes a crowd is gazing with him. As individuals of this crowd get enough and move on, others will take their places for probably half an hour. From a nearby street corner the originator of the audience is looking on. When the crowd has melted away totally, he gathers another by the same simple method. He works from 10 in the morning until 9 at night, and he is paid $2 per day. This may seem a large sum for such work, but it is not when the character of the window-gazer is taken into consideration. He must be a gentleman in appearance. To dress well is a desideratum with him. You will perceive that a man fitted out like a tramp might look into a window for an hour without exciting any attention or inducing anyone to stop and look with him. The nearer the window-gazer can approach to the ensemble of a man of leisure and wealth out for a stroll the more valuable his services are. The same things hold good of woman gazers. They are generally placed in front of the displays in the finer millinery shops or the department stores. You can spot one at any time by taking the trouble to hang about any establishment of this character, and keeping your eyes open."—Show Window.

DESERONTO IRON FOR LIVERPOOL.

The Deseronto Iron Co., Limited, are making preparations to ship 1,000 tons of pig iron to Liverpool. This is the new charcoal iron company started some months ago at Deseronto, Ont.

At a meeting of the Stratford, Ont., Board of Trade, it was decided to reorganize the board, and to call a meeting in September.

All accounts against the late Isaac G. Hutchinson, general merchant, Brighton, N.S., are advertised for by Fred. H. Hutchinson, administrator of the estate.

Use Gilbertson's Tinplates

for the following reasons:

They are heavily coated with Tin.
They are of soft Siemens quality.
They are noted for deep stamping qualities.
They are the best for canning purposes.
They cost NO more than inferior brands.

Gilbertson's make the following brands and qualities:

"Gwyned," Coke Finish,
"Regina," Coke Finish,
"Comet," Charcoal Finish,
"Lincoln," Charcoal Finish,
"Crown," Charcoal Finish,
"Pontardawe," Best Charcoal Finish.

BE PARTICULAR to ask for these brands when ordering from your jobbing house. They can be supplied in all sizes and weights.

GILBERTSON'S TERNEPLATES

"Regina" brand

This is a superior plate and heavily coated—a good roofing plate that will give satisfaction to your customers.

IMPROVED MILK CAN BOTTOM.

THE accompanying cuts show sections of a new milk can bottom made and patented by the McClary Mfg. Co., of London. This bottom is entirely new, being made of one piece of heavy sheet steel, pressed so as to form the outer hoop, and also the concave bottom, embodying all the features of the old style milk can bottom, and at the same time giving better results than the long used pieced bottom, in which the crevices and rivet heads are liable to hold soured milk, while with the new bottom there are no rivets, joints nor crevices to hold any dirt or soured milk.

It has a half-inch round iron rod placed inside the bottom edge, giving it a large round surface so that it can be easily slid over the floor of a wagon or factory, without tearing the floor as with the old style sharp edged bottom.

When completed, it is dipped in melted tin; every part, including the iron rod, being thoroughly coated and made as one piece; hence the bottom edge can never tear nor wear away.

It has a convenient receptacle to hold the body tin which allows the soldier to be thoroughly soaked in so as to make a lasting ob.

The travellers of The McClary Manufacturing Company are now carrying samples and it would be well for prospective purchasers of milk can trimmings to see these before purchasing their season's supply.

RUNNING NIGHT AND DAY.

The Syracuse Smelting Works, of Montreal, have had their works running in full operation for some time during day and night, and they report that trade was never better with them in this country.

It is understood they were most successful buyers of raw material before the advance, and are selling their babbitt metal, etc., at reduced prices.

CANADIAN GOODS WANTED.

Recent inquiries received at the Government offices in London, were as follows:

The names of one or two firms who would be interested in the manufacture of autocars are required by an engineer of good standing.

Hickory suitable for golf sticks 44 x ⅞ in. square, well dried and straight, is again inquired for.

A firm ask for the name of a Canadian house shipping wooden mantel-pieces who who would be willing to appoint them sole agents for the sale of such goods in the United Kingdom.

HARDWARE AND METAL will be pleased to forward to destination the names of any Canadian firms who can furnish information as to above.

THE USES OF GRAPHITE.

"Not a single iron casting is taken from its sand mold without the sand being first faced by graphite," says a recent writer. "Not a gun projectile is cast but the steel is melted in a graphic crucible; not a tool, not a saw is made but from graphite crucible steel. Every pound of nickel, of copper, of composition metal, of brass, is cast in some way, the metal being reduced in a graphite crucible. Evrey printing house, for the perfection of its electrotypes, is absolutely dependent on graphite. Every electrician and every department of electrical work comes under the same tribute. Graphite lubricates friction ways; it is notably the most enduring paint pigment, and the bulk of the writing done on the globe to-day is done with a graphite pencil; it has ministered to the arts of peace and to the science of war. It saves labor and it proves a short cut to desired results. In brief, not a factor which to-day contributes to civilization but is helped by graphite. It is found in great abundance in the island of Ceylon, in the Indian Ocean, and next in quality at the graphite mines at Ticonderoga, U. S. The industry is fascinating from the moment the miner drives his drill, and all along the line of its being refined, until both in usefulness and beauty it reaches perfection. The electric light would shine much less easily but for graphite, and the production of steel rails is equally dependent. The beautiful mineral has peculiar characteristics. Heat and cold and the highest and lowest extremes of both cannot touch it. It can bathe in acid as does a pebble in cold water."

MR. C. C. BALLANTYNE, Cleveland, August 22, 1899.

Sales Manager The Sherwin-Williams Co., Montreal, Canada.

DEAR SIR,—I note in "The Canadian Hardware and Metal Merchant," on page 24, of August 19, that you expect to be in Toronto during the Exposition. I think that is a very good move on your part.

In the current market quotations, I notice that they have not yet corrected the price of S.-W. P. Do you not think it would be a good plan to call their attention to it?

By the way, I find this little magazine very interesting, particularly such articles as on page 10, "Brains and Business." Then, every once in a while they give us a good article on live everyday talks, like "Through Failure to Success." I think the hardware merchants of Canada are to be congratulated on having such a good paper to read.

Yours, very truly,

A. M. PARKS, Asst. Gen. Mgr.

MESSRS. MACLEAN PUB. CO., Toronto, Ont. Montreal, August 24, 1899.

GENTLEMEN,—I thought possibly you might be interested in reading what our Assistant General Manager has to say about your valuable publication "The Canadian Hardware and Metal Merchant."

I fully agree with all he has to say, and can assure you that our Company, and everyone connected with it, appreciates, and takes great interest in reading every issue of "The Canadian Hardware and Metal Merchant."

After you have read Mr. Park's letter, kindly return it to me, and oblige,

Yours truly,

C. C. BALLANTYNE, Manager.

MESSRS. MCLEAN PUB. CO., Toronto, Ont. Montreal, August 26, 1899

GENTLEMEN,—We are in receipt of your favor of the 25th inst., and in reply would say that we did not intend the writer's or Mr. Parks' letters for publicity, but simply that you might know our opinion of your valuable paper.

You are at liberty to use both the writer's and Mr. Parks' letters for advertising purposes if you so desire, although, as already stated, they were not written for that purpose.

We have already written our Mr. Parks stating that we were going to allow you to make use of his letter, and we know he will be only too glad to oblige you in this way.

Yours, very truly, THE SHERWIN-WILLIAMS CO.,

By C. C. Ballantyne, Manager Canadian Division.

If you have anything you wish to sell to the Hardware, Paint and Oil Dealers, Plumbers and Steamfitters, Millmen, Machinists, Foundrymen, and other manufacturers in Canada. "The Canadian Hardware and Metal Merchant" is the most powerful aid you can find in your efforts to attain success.

MARKETS AND MARKET NOTES.

QUEBEC MARKETS.

MONTREAL, September 1, 1899.

HARDWARE.

THE general hardware situation continues buoyant, and, for the season, a good movement of trade is noted. Wire is firm at the advance, but trade is light. Buyers are keen after wire nails at the rise for future delivery, but jobbers will not book a long way ahead. Cut nails are quiet, but steady. Horseshoes are also wanted on forward account, and a brisk trade is noted in screws, bolts, nuts and rivets. Rope is higher both for manila and sisal, and other lines of hardware show no change.

BARBED WIRE—Trade in this line continues light, but prices are steady at $3 f.o.b. factory, and $3.10 to $3.15 in a small way.

SMOOTH STEEL WIRE — The demand is light, a few lots of hay-baling wire moving. The base price is unchanged at last week's advance, $3 for Nos. 6 to 9.

GALVANIZED WIRE — Trade continues quiet. We quote: No. 9, $3.15; No. 12, $3 30; No. 13 $3 45; No. 15, $5.15, and No. 16, $5.30.

FINE STEEL WIRE—Steady at the rise, with a moderate movement, discounts being 17½ per cent.

BRASS AND COPPER WIRE— Unchanged, with trade quiet at 50 and 2½ per cent. on brass and 45 and 10 per cent. on copper wire.

FENCE STAPLES—There is a fair inquiry at the rise, and we quote $3.25 for bright and $3.80 for galvanized per keg of 100 lb.

FINE STAPLES — As last noted. Discounts are: Cooper, 55; poultry netting, 45, and electrician, broom, bed, etc., 40 per cent. off.

WIRE NAILS—There has been a good inquiry since the rise, especially for future delivery, but both makers and jobbers refuse to book further ahead than 30 days. We quote: $3 for Standard, with the miscellaneous list 75 per cent. off list.

COPPER WIRE NAILS—Unchanged at 50 per cent. discount.

CUT NAILS—Trade quiet, but prices steady at $2.25 per keg f.o.b.

FLOUR BARREL NAILS—Steady. Flour barrel 30 and coopers' nails 35 per cent. discount.

BOAT NAILS—As last reported, at 33⅓ per cent. discount on black and galvanized.

GALVANIZED ROOFING NAILS —Steady, at 8c. per lb., with 15 per cent. discount.

PRESSED SPIKES —Unchanged, at 30 per cent. off list.

HORSE NAILS—Quiet and steady, at 50 per cent. on standard and 50 and 20 on other brands.

HORSESHOES — Inquiry for forward delivery is active, but neither makers nor jobbers will book orders for any length of time ahead. We quote as follows: Iron shoes, light and medium pattern, No. 2 and larger $3.50; No. 1 and smaller, $3.75; snow shoes, No. 2 and larger, $3.75; No. 1 and smaller, $4; X L steel shoes, new light pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; featherweight, all sizes, Nos. 0 to 4, $5.15; and toe weight steel shoes, all forward, all

To the Stove and Tinware Trade.

If you attend the Industrial Exhibition, Toronto, or the Western Fair, London, we extend to you a cordial invitation to visit us. Our travelling staff will be on hand to welcome you. . . . . .

At London we have some special jobbing lines to offer.

Managing-Director and Treasurer

sizes $6.25 f.o.b. Montreal, St. John, N.B., and Halifax, N.S. Delivered f.o.b. in Toronto, Hamilton, London and Guelph 10c. per 100 lb. extra.

SCREWS — There is a brisk trade at firm prices. Discounts are: Flat head, bright, 80 and 5 per cent; round head do., 75 and 5; flat head, brass, 75 and 5; round head do., 67½ and 5.

BOLTS — These are also fairly active. Discounts are as follows: Carriage bolts, 5-16 and smaller, 55 per cent.; ⅜ and up, 50 per cent.; full square bolts, 65 per cent.; machine bolts, 55 per cent.; coach screw bolts, 67½ per cent., and sleighshoe bolts, 72½ per cent.

NUTS AND WASHERS — In fair request and steady. We quote: Square, 3¾c. and hexagon 4¼c. per lb.; discount off list. Washers in 50-lb. boxes are 50 per cent. discount.

RIVETS—The same remarks apply to these. Discounts are: Black and tinned, 45 per cent.; ditto burrs, 40 per cent.; copper rivets and burrs, 35 per cent.

CORDAGE—In fair demand, with another advance. We quote: Manila, 7-16 and up, 13c.; ⅜, 13½c., and ¼ and 5-16, 14c. Sisal, 11½c. for 7-16 and up; 12c. for ⅜, and 13c. for ¼ and 5-16.

WRINGERS — Trade quiet and prices steady at $48 to $60, as to brand, with 45 per cent. off.

BUILDING PAPER—A fair trade is doing. We quote: Plain building, 28c.; tarred lining, 35c.; tarred roofing, $1.40, and carpet felt, $2.25.

CUTLERY—A good movement is noted in this line.

SPORTING GOODS—Loaded shells continue the active line in sporting goods.

CEMENT—Trade is quiet in an ordinary way, but some large contracts have been closed this week for German cement, which are mentioned elsewhere. We quote: Belgian, $1.90 to $2.10; English, $2.30 to $2.40, and German, $2.45 to $2.65, per cask ex wharf.

FIREBRICKS—In fair demand and steady at $17 to $23 per 1,000, as to brand.

METALS.

Heavy iron and metals are firm all round. Quotations are impossible to obtain on pig iron, while galvanized iron is strong, and the same can be said of tin and Canada plates, makers being so full of orders that prices must inevitably advance.

PIG IRON —With little or no stock offering here, and makers refusing to quote, spot prices are nominal on all kinds.

BAR IRON — At the advance, orders for future delivery have poured in, but makers will only sell as far ahead as September 30. We quote: $2.10 to $2.15 f.o.b. Montreal.

BLACK SHEETS — These are firmer, and

Open Hearth Steel

as the market is bare of stock higher prices are predicted in the near future. We quote: 8 and 15, $2.60; 18 and 20, $2.30; 22 and 24, $2.50; 26, $2.60, and 28, $2.65.

HOOP IRON—Firm at the advance, $3.25 for jobbing lots.

STEEL—Further strength is noted in steel. We quote: Sleighshoe and tire, $2.60; spring, $2.75; machinery $3.25, and toe calk, $3.10.

GALVANIZED IRON—The market is strong and advancing and we quote $4.30 to $4.80 for 28 gauge, as to brand, and $4 to $4.50 for No. 24 in case lots.

INGOT COPPER — Firmly held at 19½ to 20c.

INGOT TIN—Without change at 36c.

PIG LEAD—Steady. $4.25 per 100 lb.

LEAD PIPE—Steady. We quote: Ordinary, 7c., and composition waste, 7½c., with 20 per cent. discount.

IRON PIPE—The market has a firmer tendency and some jobbers advanced their prices this week, but others still retain the old figures. We quote: Black pipe, ⅛ and ¼-inch, $3.12; ⅜-inch, $3.25; ½-inch, $3.75; 1-inch, $5.20; 1¼-inch, $6.85; 1½-inch, $8.75 and 2-inch, $11.02. Galvanized pipe, ⅛ and ¼-inch, $5.64; ⅜-inch, $6.64; ½-inch, $7.41; 1-inch, $10.12; 1¼-inch, $14.03; 1½-inch, $17.16, and 2-inch, $23.

TINPLATES—Firmly held, and makers are so full of orders for months to come that prices must advance. We quote as follows: Coke, I. C., $4.40; charcoal, I. C., Allaway or Comet brands, $4.80; do. I. X., $5.05; Lincoln, $5; P. D. Crown, $5.30; do. I. X., $5.80; Bradley's, $6.25.

CANADA PLATES — The same conditions prevail in these. We quote: 52's, $2.60; 60's, $2.70; 75's, $2.80; full polished, $3.25; galvanized Canada plates, $4.55 for 52's.

TERNE PLATE—Stiff, at $7.50.

SWEDISH IRON—The base price on this is stiff at $3.40.

COIL CHAIN—It would cost more money to lay this material down, and some firms are already asking the new basis, but others are still selling on the old scale, but are not likely to do so long. We quote the old basis, the reference to the cost of laying down fresh supplies being specially referred to elsewhere. We quote as follows: No. 6, 10¼c.; No. 5, 9¼c.; No. 4, 8¼c., and No. 3, 7¼c. per lb.; ¼-inch, $6; 5-16, $4.75; ⅜, $4.25; 7-16, $4.10; ½, $4; 9-16, $3.95; ⅝, $3.85; ¾, $3.65, and ⅞, $3.55 per 100 lb.

SHEET ZINC — Unchanged, at 7½ to 7¾c.

ANTIMONY—Quiet, at 10 to 11c.

SPELTER—Firm, at $7.

GLASS.

There is no change in this material. We quote as follows: First break, $1.90; second, $2 for 50 feet; first break, 100 feet, $3.60; second, $3.80; third, $4.25; fourth, $4.50; fifth, $5; sixth, $5.50, and seventh, $6.

PAINTS AND OILS.

Fall orders are increasing, and there is a good movement in a sorting way as well, showing that existing stocks in retailers' hands have been broken into well. Turpentine took a slight reaction in the South, but has since firmed up, and spot prices were entirely unaffected. Linseed oil is very firm in England, and an advance is expected here. Some large contracts have been put through in seal oil, 200 and 300 bbl. lots selling at 32½c.

WHITE LEAD—Best brands, Government standard, $6.00; No. 1, $5.62½; No. 2, $5.25; No. 3, $4.87½.

DRY WHITE LEAD—$4.75 in casks; kegs, $5.

RED LEAD—Firm; casks, $4.50; in kegs, $4.75.

WHITE ZINC PAINT—Pure, dry, 8c.; No. 1, 6½c.; in oil, pure, 9c.; No. 1, 7½c.

PUTTY —We quote: Bulk, $1.65; bladders, in bbls., $1.80; bladders, in cases, $1.95; in tins, $2.05 to $2.30.

LINSEED OIL — Raw, 57c.; boiled, 60c., five to nine-barrels, 1c. less, ten and twenty-barrel lots open, net cash, plus 2c. for 4 months. Delivered anywhere in Ontario between Montreal and Oshawa at 1c. per gallon advance and freight allowed.

TURPENTINE—Single barrels, 75c.; two to four barrels, 74c.; five barrels and over, open terms, the same terms as linseed oil.

MIXED PAINTS—Firm; $1.10 to $1.30 per gallon.

CASTOR OIL—Firm; 7½ to 8c.

SEAL OIL—33 to 35c.

COD OIL—35 to 37½c.

NAVAL STORES—Fair demand for all lines, and prices show no change: Resins, $2.75 to $4.50, as to brand; coal tar, $3 to $3.50; cotton waste, 4½ to 5½c. for colored, and 6 to 7½c. for white; oakum, 5½ to 6½c., and cotton oakum, 9 to 11c.

PETROLEUM.

Firm at last week's rise. We quote: Crown Acme, the new Sarnia oil, 16½c.; Perfection and Silver Star, Canadian refined, 15½c.; American prime white, 17c.; water white, 18c., and Pratt's astral, 19½c., in small quantities.

HIDES.

Quiet and steady. We quote: Lambskins, 40c. Beef hides, 9, 8 and 7c., while calfskins are 11 and 9c.

COAL.

Steady to firm. We quote: Stove, $5.75; chestnut, $5.75; egg, $5.50; Scotch

TENDERS FOR STEAMSHIP SERVICE.

SEALED TENDERS, addressed to the undersigned, at the Department of Trade and Commerce, Ottawa, marked "Tenders for Steamship Service," will be received until the 15th day of September next, for steamship service, including the carrying of Her Majesty's Mails for a period of five years, for the following:

The service to be during the winter season, say from between the 15th November and 1st December in the Fall to the 1st of May in the Spring. Three full round trip per week, making in all not less than sixty full round trips between Murray Bay on the North Shore and St. Denis on the South Shore on the River St. Lawrence.

Tenders must state the class, engine power, speed, capacity, passenger and other accommodation, etc., of the vessel proposed to be employed, and must show to the satisfaction of the Minister of Trade and Commerce that the vessel offered is capable of fulfilling such conditions as may be imposed.

The Government does not bind itself to accept lowest or any tender.

W. G. PARMELEE,
Deputy Minister of Trade and Commerce.

Department of Trade and Commerce,
Ottawa, 18th August, 1899. (6)

METAL SHINGLE AND SIDING CO. Limited
Preston, Ont.

grate, $6; Scotch steam, $4 to $4.50; Tower ports steam, $3.50 to $3.75.

MONTREAL NOTES.

There has been an advance of ½c. in the price of both manila and sisal rope.

While it would cost more to lay down iron pipe, the old scale is still retained here.

There has been an advance in black sheets, and values on them point still higher.

A sale of 10,000 bbls. of German cement was made this week at $2.65, delivered, on Eastern account.

The Thos. Robertson Co. have been appointed Canadian agents for the "Sirdar" hot-water boiler. This is an American make.

While the old scale is still retained in coil chain, it would cost an advance to lay down fresh supplies, so that a rise in spot values is expected shortly.

ONTARIO MARKETS.

TORONTO, September 1, 1899.

HARDWARE.

A GOOD sorting-up trade in general hardware is to be noted this week. Quite a number of buyers are in the city, but it will not be until next week, the second week of the Exhibition, that the great bulk of them will arrive. Those who are here this week report trade in a healthy condition, and their expectations for the future are hopeful. What changes have been made in quotations during the week have been in the direction of higher prices. Wire nails are up another 5c. per keg. White enameled ware has been advanced 5 per cent., and stove pipes are 50c. per 100 lengths dearer. The discount on double pointed tacks is 85 per cent., instead of 85 and 5 per cent.

BARBED WIRE — Prices have been advanced $2 per ton in the United Sates. Here, trade is quiet and prices unchanged at $3.25 per 100 lb. f.o.b. Toronto.

SMOOTH STEEL WIRE—Oiled and annealed is quiet, but there is still a fair trade to be noted in hay-baling wire, although the demand is not as brisk as it was a week ago. The base price is unchanged at $3 per 100 lb.

GALVANIZED WIRE—There is a little going out and prices are firm and higher. We quote : Nos. 6, 7, 8 gauge, $3.60 ; No. 9, $3.10; No. 10, $3.70; No. 11, $3.75; No. 12, $3.20 ; No. 13, $3.45 ; No. 14, $4.10; No. 15, $4.70 ; No. 16, $4.85.

WIRE NAILS—These are 5c. per keg dearer, with the demand good. Base price is now $2.87½ for carloads, and $2.95 for smaller quantities.

CUT NAILS — Trade is still quiet. Base price is unchanged at $2.25 f.o.b. Toronto, Hamilton and London.

HORSE NAILS — A moderate trade is to noted. We quote : Standard, oval head, 50 per cent.; Acadia, countersunk head, 50 and 20 per cent.

HORSESHOES—Not a great deal doing yet. We quote f.o.b. Toronto, Hamilton, London and Guelph : No. 2 and larger, light, medium and heavy iron shoes, $3.60 ; snow shoes, $3.85 ; light steel shoes, $4.00 ; featherweight shoes, all sizes, $5.25. No. 1 and smaller, light, medium and heavy iron shoes, $3.85 per keg ; iron snow shoes, $4.20 ; light steel shoes, $4.15; featherweight steel shoes, all sizes, $5.25.

SCREWS — A decidedly active trade is still to be noted. We quote : Flat head bright, 80 and 5 per cent. off the list ; round head bright, 75 and 5 per cent.; flat head brass, 75 and 5 per cent.; round head brass, 67½ and 5 per cent.; flat head bronze, 67½ and 5 per cent.; round head bronze, 62½ and 5 per cent.

BOLTS — Business continues active and prices firm : We quote as follows : Norway bolts, full square, 65 per cent. ; common carriage bolts, 5-16 and under, 55 per cent. ; ditto, ⅜ and larger, 50 per cent.; ditto, full square, 65 per cent.; machine bolts, all sizes, 55 per cent.; coach screws, 67½ per cent.; sleighshoe bolts, 72½ per cent.; blank bolts, 55 per cent.; bolt ends, 62½ per cent.; nuts, square, 3¾c. ; nuts, hexagon, 4¼c.; tapping nuts, 60 per cent.; tire bolts, 60 and 10 per cent.; stove bolts, 60 and 10 per cent.

ROPE —Business is only moderate. We quote: Sisal, 7-16 in. and larger, 11½c. per lb.; ⅜ in., 12c.; ¼ and 5-16 in., 12½c. Manila, 7-16 in. and larger, 13c. per lb.; ⅜ in., 13½c.; ¼ and 5-16 in., 14c.; New Zealand, 11c. per lb.; Deep sea line, 13½c. for water laid, and 14½c. for machine-made ; hemp, 7 to 9c.; lath yarn, 10c. Clotheslines, 48 feet, 90c.; 60 feet, $1.20 ; 72 feet, $1.50 ; 100 feet, $2.

RIVETS AND BURRS—Business is still good. We quote : Carriage section, wagon box, rivets, etc. (steel), 60 per cent. off the list ; ditto (Norway iron), 60 per cent.; black M rivets (steel), 55 per cent.; ditto (Norway iron), 45 per cent.; iron burrs, 40 per cent.; copper rivets, 35 per cent.; bifurcated, with box, $1.25; coppered iron rivets and burrs, in 5-lb. carton boxes, 30c. per lb.

CHURNS—Very little doing. We quote as follows : Metal frame —No. 0, $3 ; No. 1, $3.20 ; No. 2, $3.40; No. 3, $3.75; No. 4, $4.50 ; No. 5, $5.90. The price of wooden frames is 15c. per churn less than the above. Terms, 3 per cent. off 30 days f.o.b. Toronto.

WRINGERS — Trade is quiet. We quote as follows : "Leader," $60 per doz. ; "Royal Canadian," $58; "Royal American," $48. Prices are all f. o. b. Toronto, Hamilton, Brockville, and Montreal. Discount, 45 per cent. Terms, four months, or 3 per cent. 30 days.

BUILDING PAPER—Trade is opening up fairly well. We quote : Plain building, 28c. per roll ; tarred lining, 35c., according to quality ; tarred roofing felt, $1.40 per 100 lb.; carpet felt, $2.25 per 100 lb.

WARE—The feature in this line is an advance of 5 per cent. in the price of white enameled ware. The demand is good for enameled ware and fair for tinware.

STOVE PIPES—Prices have been advanced 50c. per 100 lengths. We quote : 5 to 6-inch, $6.75 ; 7-inch, $7.25.

CEMENT—The demand keeps active, with prices firm. We quote in barrel lots as follows : Canadian Portland, $2.65 to $2.90; English do., $3 ; Canadian hydraulic cements, $1 to $1.10; calcined plaster, $1.90; asbestos cement, $2.50 per bbl.

METALS.

The metal market is still characterized by a great deal of firmness. Trade is active.

PIG IRON — The market is still strong. We quote Hamilton iron at $21 f.o.b. furnace.

BAR IRON—Business continues brisk and prices firm at the $2.15 base.

BLACK SHEETS—Trade continues active, with prices firm and unchanged.

GALVANIZED IRON—Is moving out well. A scarcity of stock is still reported. The price of 28 gauge is unchanged at $5.

COPPER—A moderate trade is being done in ingot copper, but a fair business is to be noted in sheet copper. Prices are unchanged and steady. We quote : Ingot copper, 20 to 21c. per lb. and sheet, 23 to 23½c. per lb.

PIG TIN—There is a fair movement, with local stocks light. Local quotations are unchanged at 37c. per lb., but in the outside markets prices are somewhat irregular.

TINPLATES — Some local houses have received fresh shipments during the week, but stocks are, on the whole, still light. The demand is fairly good.

CANADA PLATES —Are beginning to move freely. The demand for the moment is for small lots. We quote : All-dull, $2.75 ; half-polished, $2.85 ; all-bright, $3.20.

IRON PIPE—The demand for iron pipe continues active at firm prices. Quotations on black pipe are as follows : ¼ to ⅜ inch, $3.35 ; ½ inch, $3.40; ¾ inch, $4 ; 1 inch, $5.50 ; 1¼ inch, $7.35; 1½ inch, $9.25 ; 2 inch, $12.50 ; 2½ to 6 inch, discount off the list 45 per cent. Galvanized pipe is quoted as follows : ¼ inch, $6.50 ; ¾ inch, $8 ; 1 inch, $11; 1¼ inch, $15.25; 1½ inch, $19 ; 2 inch, $27.

PIG LEAD—Trade is quiet at 4½ to 4¾c. per lb.

LEAD PIPE — Trade is just moderate. We quote: Ordinary pipe, 7c.; waste, 7½c. Discount, 20 per cent.

RANGE BOILERS — The demand, while not as active as it was, is still fair. We quote: Galvanized, 30 gals., $9; 35 gal., $10; 40 gal., $11. Copper, 30 gal., $22; 35 gal., $26; 40 gal., $30; discount off copper boilers, 10 per cent.

SHEET ZINC—There is a good movement. Prices are unchanged at 8¼ for cask lots and 8½c for smaller quantities.

SPELTER—Trade is quiet at 7½ to 7¾c. per lb.

SOLDER—Trade is fairly good. The ruling price for strictly half-and-half is 21½ to 22c. per lb. We quote: 21 to 22c. for half-and-half; 20 to 21c. for refined, and 18 to 19c. for wiping.

PAINTS AND OILS.

A general briskness continues. Wholesale dealers state that the amount of business done during August, this year, is unprecedented, especially with regard to country trade. The briskness has affected all materials. Prices throughout are firm, with no change to quote, except that pure liquid paints are $1.10 straight, instead of $1 to $1.10 as noted last week. We quote as follows:

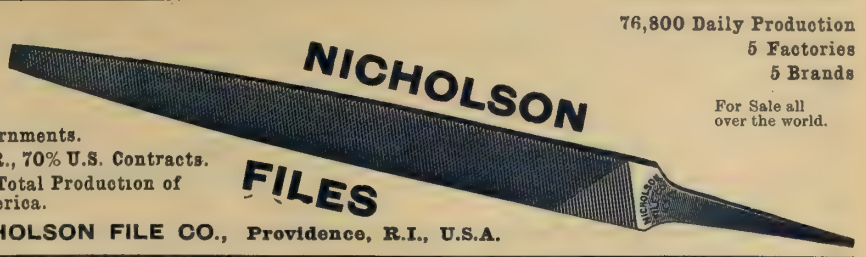
WHITE LEAD—Ex Toronto, pure white lead, $6.12½; No. 1, $5.75; No. 2, $5.37½; No. 3, $5; No. 4, $4.62½; dry white lead in casks, $5.10.

RED LEAD—Genuine, in casks of 560 lb., $4.90 to $5; ditto, in kegs of 100 lb., $5.15 to $5.50; No. 1, in casks of 560 lb., $4.75; ditto, kegs of 100 lb., $5.

LITHARGE AND ORANGE MINERAL—Litharge, 6 to 6½c.; orange mineral, 7½ to 8½c.

WHITE ZINC—Genuine, French V.M., in casks, $7 to $7.25; Lehigh, in casks, $6.

PARIS WHITE—90c.



WHITING — 55c. per 100 lb.; Gilders' whiting, 85c.

GUM SHELLAC—In cases, 20c.; in less than cases, 24c.

PLASTER PARIS — Ordinary, $1.75 per barrel; New Brunswick, $2 to $2.20 per barrel.

PUMICE STONE—Powdered, $2.50 per cwt. in barrels, and 4 to 5c. per lb. in less quantity; lump, 10c. in small lots, and 8c. in barrels.

LIQUID PAINTS—Pure, $1.10 per gallon; No 1 quality, 90c. per gallon.

NICHOLSON FILE CO., Providence, R.I., U.S.A.

BRITISH PLATE GLASS COMPANY, Limited. Established 1773

Manufacturers of **Polished, Silvered, Bevelled Chequered, and Rough Plate Glass.** Also of a durable, highly-polished material called "**MARBLETTE**," suitable for Advertising Tablets, Signs, Shop Facias, Direction Plates, Clock Faces, Mural Tablets, Tombstones, etc. This is supplied plain, embossed, or with incised gilt letters. **Benders, Embossers, Brilliant Cutters, etc., etc.** Estimates and Designs on application.

Works: Ravenhead, St. Helens, Lancashire. Agencies: 107 Cannon Street, London, E.C.—128 Hope Street, Glasgow 12 East Parade, Leeds, and 36 Paradise Street, Birmingham. Telegraphic Address: "Glass, St. Helens." Telephone No. 68 St Helens.

SEAL OIL—59 to 60c. per gallon, and yellow seal at 49 to 50c.

CASTOR OIL—East India, in cases, 9c. per lb. and 10c. for single tins.

LINSEED OIL — Outside western points (freight allowed): Raw, 1 to 4 barrels, 59c.; boiled, 1 to 4 barrels, 62c. Prices in Toronto, Hamilton, London, are 1c. per gallon less.

TURPENTINE — Outside western points, freight allowed, 1 to 4 barrels, 77c.; in less quantities than barrels, 5c. per gallon extra will be added and packages charged for. Prices in Toronto, Hamilton, and London are 1c. less than the above. Terms, net 30 days.

GLASS.

Business is brisk. A few import orders are still arriving. Though the arrivals of these orders are small to date, it is expected that all orders will be delivered before the close of navigation. Prices in Europe are decidedly firm. The feeling here is steady. We quote window glass: Star, first break in 50-foot boxes, $2.15, and in 100-foot boxes, $4; double diamond under 25 united inches, $6, Toronto Hamilton and London; terms 4 months or 3 per cent. 30 days.

OLD MATERIAL

Prices are firm throughout. A big movement is noted, as the large offerings are readily bought up. We quote as follows: Agricultural scrap, 55c. per cwt.; machinery cast, 60c. per cwt.; stove cast scrap, 45c.; No 1 wrought scrap, 55c. per 100 lb.; new light scrap copper, 12½c. per lb.; bottoms, 11c.; heavy copper, 15c.; light scrap brass, 7½c.; heavy yellow scrap brass, 10c.; heavy red scrap brass, 11c.; scrap lead, 2½c.; zinc, 3c; scrap rubber, 4c.; good country mixed rags, 65 to 75c.; clean dry bones, 45 to 50c per 100 lb.

HIDES, SKINS AND WOOL.

HIDES — A brisk demand keeps prices firm. We quote cowhides: No. 1, 8½c.; No. 2, 7½c.; No. 3, 6¼c. Steer hides are worth ½c. more. Cured hides are worth 9c.

SKINS — The feeling continues stiff, with prices unchanged. We quote as follows: No. 1 veal, 8-lb. and up, 9c. per lb.; No. 2, 7c.; dekins, from 30 to 35c.; culls, 15 to 20c. Sheep and lambskins are selling at 45c.

WOOL — Conditions are unchanged. There is little doing. We quote fleece at 14 to 14½c., and unwashed at 8 to 9c.

PETROLEUM.

There is a steady improvement in business. Prices are firm and unchanged. We quote in barrels, Toronto: Canadian, 14c.; Sarnia prime white, 14c.; Sarnia water white, 15c.; photogene, 15½c.; American water white, 16½c.; Pratt's astral, 18c.

COAL.

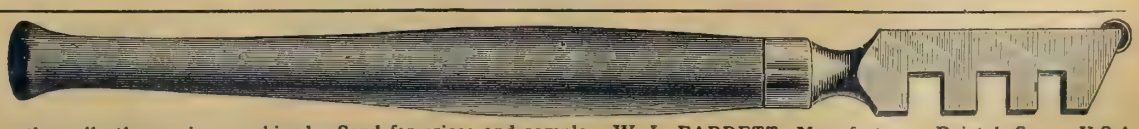
An advance of 25c. per ton has been made in the price of anthracite coal. We quote Anthracite at Buffalo and bridges: Egg, stove and nut, $4.75 per gross ton, or $4.24 per net ton; grate, $4.50 per gross ton or $4.01 per net ton.

MARKET NOTES.

Wire nails are 5c. per keg dearer.

The price of stove rods has been advanced.

Cinder sifters are now quoted at $1.25 per dozen.



Stove pipes are quoted 50c. per 100 lengths higher.

The discount on enameled ware has been reduced to 50 per cent.

The Canadian General Electric Company, Limited, on September 1, 1899, will remove their head office from its present location, 65 to 71 Front street west, to 14 and 16 King street east, Toronto.

Barrett's Practical Glass Cutters are the standard the world over.

Sold by more Hardware Dealers than all other makes combined. Send for prices and sample. W. L. BARRETT, Manufacturer, Bristol, Conn., U.S.A

BUSINESS CHANGES.

DIFFICULTIES, ASSIGNMENTS, COMPROMISES.

ANDERSON & REARDON, manufacturers of picture frames, etc., Toronto, have assigned in trust.

Alexander Payette, tinsmith, St. Johns, Que., has assigned.

Wm. Allen, sawmiller, Farewell, Ont., has assigned to Robert Allan.

Assignment has been demrnded of Fyfe & Co., contractors, Montreal.

Campbell Bros., general merchants, McAdam Junction, N.B., have assigned.

Fairgreive & Blyth, contractors, Galt, Ont., have assigned to Duncan Murray.

The Kay Electric Motor Co., Hamilton, Ont., have assigned to J. T. Middleton.

Robert McLennan, hardware dealer, Alexandria, Ont., has assigned to Angus McDonald.

Paradis & Jobin have been appointed curators of J. & J. Nadeau, general merchants, etc., Cascapedia, Que.

James Martin has been appointed provisional guardian of M. A. Menard & Co., general merchants, Buckingham, Que.

L. N. Bourgeois & Co., general merchants, Danville, Que., have assigned, and a meeting of their creditors has been called.

PARTNERSHIPS FORMED AND DISSOLVED.

Precourt & Co., contractors, Montreal, have registered partnership.

Bouchier & McAdam, general merchants, Abbotsford, B.C., have dissolved, — Bouchier continuing.

Jules and Alair Leger have registered partnership under the style of Jules, Leger & Frere, contractors, Montreal.

Copartnership has been registered by James J. Hughes and George E. McFarlane as general merchants, under the style of Hughes & McFarlane, Souris, P.E.I.

SALES MADE AND PENDING.

Wm. Harrison, blacksmith, Pinkerton, Ont., is advertising his business for sale.

Wm. Tost, blacksmith, Glen Williams, Ont., is advertising his business for sale.

Simpson & Lareva, sawmillers, Grand Forks, B.C., have sold an interest to J. W. Stout.

The assets of Robert Robertson, general merchant, Burnstown, Ont., have been sold at auction.

The stock of A. N. Ellis & Co., general merchants, Carberry, Man., has been sold at auction for 59c. on the dollar to T. Finklestein.

CHANGES.

W. R. Erskine, general merchant, Atwood City, Ont., has been succeeded by G. Lougheed.

John McFarlane, general merchant, etc., Campbell's Bay, Que., has retired. He has been succeeded by McFarlane Bros.

T. E. Lee contemplates opening out as harness dealer in Grenfell, N.W.T.

Wilbrod Labrecque has started a hardware store in St. Henri de Montreal.

The Columbia Light Syndicate, manufacturers of vapor lamps, have started business in Victoria.

The stock of T. G. Clute, general merchant, Stirling, Ont., has been sold to W. R. Mather, who continues under the style of Clute & Mather.

L. J. Lahay, sawmiller and general merchant, Kearnay, Ont., has sold out his general store to D. S. Vincent, of Novar, Ont., who is selling out his Novar business and intends moving to Kearnay.

Telesphore Chenier, carriagemaker, cheese and butter manufacturer, etc., St. Anne de Prescott, Ont., has sold his carriagemaking business to Lavigne Bros., who have started business in that place.

DEATHS.

D. Sissons, general merchant, Carlton, N.W.T., is dead.

FIRES.

M. C. Drew, hardware dealer, Burk's Falls, Ont., has been burned out.

WOOD, VALLANCE AND CO. IN TORONTO

Wood, Vallance & Co., wholesale hardware dealers, Hamilton, have opened a branch at 88 York street, Toronto, where they have on display a large assortment of cutlery, guns, rifles, sleigh-bells, and miscellaneous shelf hardware. H. T. Eager will be the firm's representative. Wood, Vallance & Co., have many friends and customers, who, no doubt, will, during the Industrial Fair, avail themselves of the opportunity of seeing the samples shown in this new branch.

"BAGGED" ON HIS DEPARTURE.

Mr. W. Beatty, for many years bookkeeper for The Thos. Robertson Co., Montreal, has severed his connection with this firm and has gone to New York, where he enters into the grain business in partnership with his brother. On the eve of his departure he was presented by his fellow-workers with a handsome traveling bag.

W. J. Thompson, machinist, Liverpool, N.S., has been burned out; no insurance.

FOR YOUNG CANADIANS.

Don't wait until the iron's hot,
But make it hot by muscle.
Don't wait for the wealth your father's got,
Take off your coat and hustle.

What a year 1900 is to be! What a time for the young Canadian hustler—the rapid stenographer, the expert bookkeeper and the nimble telegrapher! They will all be wanted just as surely as that bright year is coming around. A start now will put you with the successful ones, and we can start you aright. Will you send us your name and let us tell you how? It is no trouble to us, and will benefit you.

W. C. CRAWFORD AND TILBURY.

ENTERPRISING, energetic, progressive, are adjectives that can be very appropriately applied to the everyday life of W. C. Crawford, who, to-day, stands in the foremost ranks of Canada's business men. Born and brought up on a farm near St. Marys, Ont., he was fortunate in having the training of a father who looked upon farming as being as much of a business venture as any commercial undertaking. He regarded method and a generous supply of brains as necessary to insure success. He also considered that to make boys men, it was essential to teach them self reliance, and, therefore, while still in his teens, Mr. Crawford found himself in business as a horse and cattle buyer, and the experience thus obtained was of inestimable value to him in after years.

On attaining his majority he received his donation of a farm from his father, but, having a desire for a commercial career, he shortly after entered a hardware store in St. Marys, and worked for over a year without remuneration, simply to gain an insight into the business.

Mortgaging his farm he purchased a stock and opened up in Palmerston, Ont., but soon finding that opportunities for advancement were very slight, he commenced to look around him for a better location, taking the advice of a traveler (and what merchant is not in some way indebted to the traveling fraternity ?) he went down to Tilbury to prospect. Driving through the country, his previous experience in farm life enabled him fully to size up the surroundings, and he immediately rented the only vacant building in the village, which proved to be the skating rink, and shortly had his stock transferred.

His promptness in this case was well rewarded, as the next day another prospective hardwareman tried to rent the same building, but, upon hearing that a hardwareman had already rented it, he gave up any idea of locating there. This was in the year 1885.

By constant attention to business, which from the start was of a healthy nature, a larger business was transacted every year. The original building was 23 x 175 ft., two flats, in which was carried an extensive stock of hardware, stoves, tinware and furniture. Realizing that to maintain one's trade, in a country town especially, other lines must be as fully represented as your own, otherwise trade would drift elsewhere, and finding that for want of capital several firms in the general business were languishing, and the trade in those lines was drifting to other centres, Mr. Crawford, with the promptitude that has always characterized his actions in the past, commenced the erection of an additional building of 27 x 175 ft., making his entire building 50 x 175 ft., two flats, and giving him, without doubt, the largest store west of Toronto. This store is now complete, and will open on September 1 with full lines of dry goods, boots and shoes and groceries. It is fitted up with plate-glass front, electric lights, and cash carriers to the office in the centre of the store.

The office is finished in the natural wood, while the windows are so arranged that there is not a dark corner anywhere in the building. The waiting and toilet-rooms are a novel and enjoyable feature in a country store, and will, no doubt, be highly appreciated. Aside from this, Mr. Crawford is also erecting a neat brick building (on the corner above his store) 24 x 48 feet for the Merchants Bank.

Outside of his extensive general business, he carries on a large handle business, and has agents in Montreal and Vancouver.

Taking a keen interest in the affairs of the village, which, principally through his efforts, has its present waterworks system for fire protection as well as several other benefits, such as electric lighting, which his keen business insight has enabled it to obtain.

Mr. Crawford is a member of the

Dominion Travelers' Association and the Toronto Board of Trade, and keeps in touch with the living questions of the day. He enjoys sport in its quieter ways, and summer finds him partial to tennis, while the winter finds him an enthusiast of the "Roarin'" game.

One of the immediate results of Mr. Crawford's move, is that the business, which had formerly been somewhat straggling, is now centralizing, and J. S. Richardson, dry goods, etc., is putting up a fine brick store, 40 x 140 feet, on the corner opposite to that which will be occupied by the Merchants Bank. On the next lot, Henry Beught is erecting a building, 24 x 50 feet, for a private bank, and across the street, the Moffat Block and offices complete a conservative estimate of about $25,000 worth of new buildings that have been erected this year, making about $50,000 worth of new buildings that have been erected in Tilbury during the past two years, and will place Tilbury in the front rank of the towns and villages in Southern Canada, and will, doubtless, greatly benefit its enterprising citizens.

SCOTT MCKERROW.

A NEW SCREWDRIVER.

The North Bros. Mfg. Co., Philadelphia, Pa., are putting on the market a new screwdriver. It will be known as the "Yankee" spiral-ratchet screwdriver, No. 20. It is a modification of this company's No. 30 spiral-ratchet screwdriver. and is designed to push or ratchet screws into place, but not to take them out in that way. It is arranged to be used as a rigid driver by simply moving the shifter to the opposite end of the slot. It has great simplicity, compactness, strength and durability.

The construction of ratchet and pawl permits of a very compact arrangement, making the tool convenient in size and of light weight, yet stronger in these vital points than any similar tool now made. Neither pawl nor ratchet can bend, break or get out of order. The friction in ratchet mechanism is so slight as to be hardly felt; the backward movement, like the "Yankee" ratchet driver, is as easy as in a good "stem-winder," and quite as noiseless.

The nut working in the spiral is of brass, and, with the spiral groove in the rod, is so designed that the wear has been reduced to a minimum.

Full directions for using this driver are given on a small descriptive circular, which can be had from North Bros. for the asking.

This driver is made in three sizes. Size 1 is 14 inches long, including bit, when fully extended, and has a push of 4 inches. Size 2 is 17 inches in length, and has a push of 5 inches. Size 3 is 19 inches in length and has a push of 6 inches.

Three bits are furnished with each of these tools, which are packed singly in strong paper boxes. The screwdriver fully extended, and the bits sold with it, are shown by the accompanying cut. Net prices of this new tool can be had on application.

A GERMAN OPINION.

The present railway mileage of the world is about 443,000, or, counting the known land of the world, 17 square miles to each mile of track. During the past 15 years, the world's railway building has averaged about 14,000 miles annually. But, with the revolution in the industries of the world that has been going on, particularly in the last decade, there has been great increase in the demand for many of the raw materials which underlie the manufacture of great staples, requiring the opening up of new territory, and, of course, the first requisite is transportation, and the foundation of transportation on land is the railroad, so that all demands begin at the ironmaster's door. Aside from the opening up of new and sparsely settled countries, all Europe is now planning to exploit the most densely populated continent of the world, Asia, and to bring modern methods of production and exchange into that oldest of all civilizations. With railroad building in China, in India, in Persia, in Africa, in Australia, in South America, the railway building for the next 15 years promises to be much heavier than for the past 15, and it will carry along with it an enormous use of iron and steel to supply all the necessities of the cruder arts which will be developed as new country is opened up. While in the more highly developed and organized countries iron and steel goes into not only increased machinery and tools, but enormously into construction. The development of new countries to secure raw material necessitates increased tonnage to carry bulky freights, and with this goes larger and faster ships for the more crowded lines of travel and traffic between the great commercial nations, not to mention enormous gains in the internal water commerce of different countries. In this latter respect the United States leads, because of its river tonnage and the still greater tonnage of the Great Lakes. Some idea of this lake tonnage is given in the fact that entries and clearances, in number of vessels and in tonnage at Chicago, considerably exceed that of the port of New York, with Milwaukee and other large Michigan ports, Duluth and other large Superior ports, the ports of Lake Huron, Lake Erie, with Buffalo and Cleveland leading, of Ontario and the St. Lawrence, show what is going on in North America, while, from our Atlantic, Gulf and Pacific ports, new lines and additional steamers are heard of day by day. All this tonnage is going into iron and steel. As it is with us, so is it with other commercial nations. The demand for iron, therefore, rests on the growth of the world, on the rapidly-changing methods of travel and traffic on land and sea and of the bringing of all the industries of the great industrial countries of the world up to the latest methods, in order to meet the necessities of competition in trade. When these facts are considered, it needs no argument to show that the demands for iron and steel must steadily and rapidly increase, and that it is not a temporary demand, but one that is bound to last for many years. This explains why, in spite of advances in prices, which in former years would have checked business, the demand now keeps up and is likely to keep up.—Kuhlow's German Trade Review.

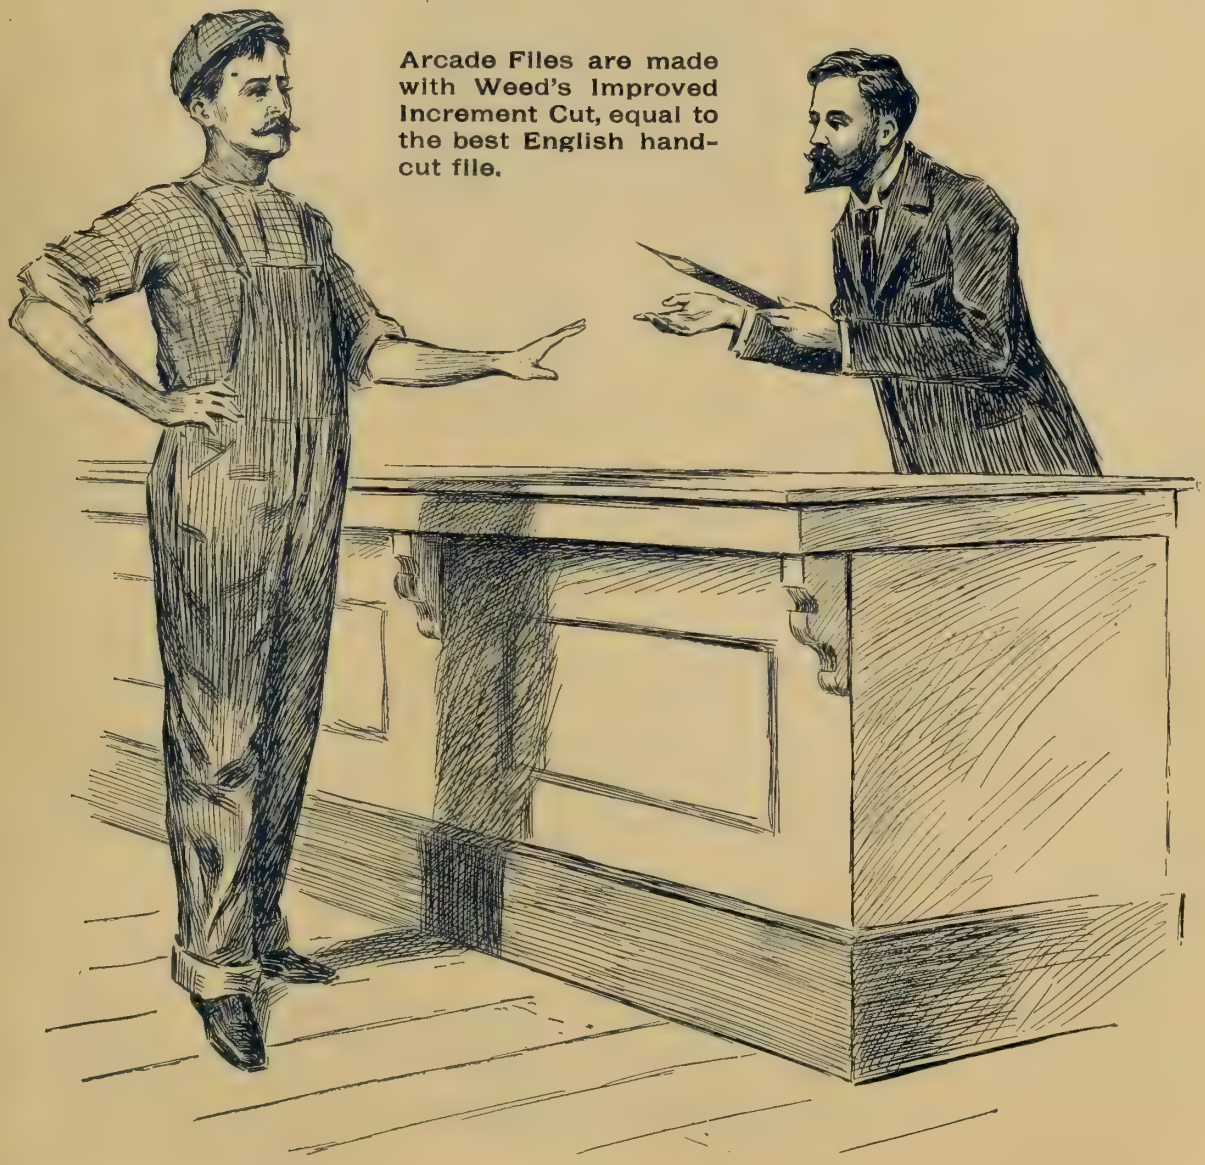
A SMALLER FRUIT EVAPORATOR.

The G. H. Grimm Manufacturing Co. are now putting on the market a smaller size of their "Champion" fruit evaporator suitable for use on the kitchen stove. It is made on the same principle as their larger ones, and will evaporate fruits and vegetables for family use very quickly and with the same fire that does the cooking, producing the best quality of clean white fruit.

This company are issuing a new catalogue which they will be pleased to send to anyone upon application.

PERSONAL MENTION.

Mr. J. S. Weichel, hardware and coal dealer, Elmira and Waterloo, is in Toronto this week doing the Fair.



Mr. A. H. Symonds, Toronto, representing George Butler & Co., Limited, Sheffield, England, and other firms, both in Great Britain and the United States, returned a few days ago from a business trip through the Maritime Provinces. He reports business good.

HEATING AND PLUMBING

MONTREAL MASTER PLUMBERS' PICNIC.

THE third annual picnic held by the masters and journeymen plumbers of Montreal at Otterburn Park, on Saturday, August 26, was a grand success in every particular, and redounded greatly to the credit of the different committees in charge.

Everything that could add to the enjoyment of the pleasure-seekers was thought of and carried out in the fullest manner, and all came home thoroughly satisfied with their day's outing.

The master plumbers themselves, showed their interest by a numerous attendance, and about 250 of the trade with their wives, their families and sweethearts, availed themselves of the pleasure of spending a delightful day at this splendid picnicing grounds.

A long and varied programme of sports was prepared, and included running, jumping and putting the weights, all of which were enthusiastically and strenuously contested, whilst a large pavilion with excellent music was provided for those wishing milder and more pleasing entertainment.

The prizes were handsome and appropriate, and worthy of the donors and the committee. Many of the donations were in cash, which was expended by the committee in buying prizes. Below is a list of the manufacturers who contributed :

LIST OF DONATIONS.

Dominion Radiator Co., cash $10 ; Warden King & Son, cash $10, 1 set stable fixtures; Star Iron Works, cash $10, 1 black watch ; Wm. Clendinning & Son, 1 coffee pot ; H. R. Ives, 1 bedstead ; The Thos. Robertson Co., Limited, cash $10, 1 Primus stove ; Gurney-Massey Co., Limited, cash $10, 1 scale ; Canadian Asbestos Co., ½-gross asbestos lighters ; James Robinson & Co., cash $10 ; Alex. Bremner, 1 wheelbarrow ; The Robert Mitchell Co., cash $10.

Many of the master plumbers also contributed both prizes and money.

RACES AND WINNERS.

Putting 56-lb. weight, open—1st, gas lamp, Crowder ; 2nd, box cigars, Cavagnah ; 3rd, granite tea pot, Gardiner.

Putting 16-lb. Shot—Members only.—1st, Primus stove, J. E. Mullin ; 2nd, enameled coffee pot, Gardiner ; 3rd, asbestos pipe, Budd.

220 Yards' Race—Master plumbers, members only.—1st, set stable fixtures, J. Gardiner ; 2nd, blue flame oil stove, Lesperance ; 3rd, wheelbarrow, Egan.

50 Yards' Race—Boys 12 years and under.—1st, pair boots, Manstin ; 2nd, running shoes, Farrell ; 3rd, baseball bat, Sullivan.

100 Yards' Race—Girls 12 years and under.—Special prizes for all.

100 Yards—Young ladies' race, 3 prizes.

75 Yards' Race—Members' wives only.—Five prizes were given for this race.

440 Yards' Race—Journeymen plumbers, single members.—1st, acetylene gas lamp, Cleland ; 2nd, pipe, Burnett ; 3rd, box of cigars, Lorand.

Putting 16 lb. Shot—Apprentices only.—1st, pair of shifting tongs, Goulest ; 2nd, hat, Monpetit ; 3rd, necktie, Martineau.

220 Yards' Race—Married men only.—1st, bedstead, Mullens ; 2nd, gas lamp, Deperon ; 3rd, hat, Theriault ; 4th, pipe, Budd.

Hop, Step and Jump—Members only.—1st, cruet stand, J. E. Mullens ; 2nd, umbrella, Gardiner ; 3rd, box of cigars, Theriault.

220 Yards' Race—Tinsmiths and roofers—1st, set of carvers, Poquette ; 2nd, asbestos fires, Egan ; 3rd, pair of snips, Denman.

Three-Legged Race, 100 yards.—1st, two umbrellas, Hogan and Rockford ; 2nd, two walking canes, Mullens and Cowper.

100 Yards' Race—Master plumbers, 40 years and over.—1st, scale, John Watson ; 2nd, stocks and dies, C. Egan ; 3rd, set of bells, J. A. Sadler.

Long Jump — Open. — 1st, cigar case, Gillard ; 2nd, cuff links, Laurin ; 3rd, scarf pin, Beaudry.

220 Yards' Race—Members 25 years at trade.—1st, ton of coal, Gardiner ; 2nd, barrel of flour, Crowder ; 3rd, ham, Hickie.

440 Yards' Race—Carters in employ of members only.—1st, driving mitts, Seguin ; 2nd, felt boots, Lesperance ; 3rd, box of tobacco, McCarthy.

One Mile Race—Open.—1st, silver cup, Marshall ; 2nd, pickle jar, Brennan ; 3rd, set of carvers, Smith.

880 Yards' Race — Bookkeepers and clerks, supply houses only.—1st, half-dozen white shirts, Maver ; 2nd, bicycle lamp, Valance ; 3rd, two neckties, Attler.

440 Yards' Race—Apprentices only, three years at trade.—1st, block watch, Hammond ; 2nd, tools, value $2, Sullivan ; 3rd, pair plyers, Evans.

220 Yards' Fat Mens' Race, 200 lb. and over — Members only. — 1st, pickle jar, Lesperance; 2nd, small cruet, Crowder; 3rd, pipe, Atchison.

220 Yards' Smoking Race —Open.—1st. pipe, Bailey ; 2nd, tobacco pouch, Westcott; 3rd, cigar case, Watson.

NOTES.

Several races developed many cases of defective (wind) pipes which no amount of repairs can ever make new.

A man may be a good runner and a good smoker, but to do both at the same time tested the ingenuity of all the racers, and baffled not a few.

P. J. Carroll was the heaviest man on the ground.

Had Mr. Lalonde not been too keen on the start and paid more attention to his feet, he would have made a better showing in the fat man's race.

H. McLaren was a picnic in himself, and no doubt through his knowledge brought back many pleasing remembrances of the day.

Mr. Lesperance is the happy possessor of seven prizes won in fat men's races.

It is to be hoped J. E. Mullens will enjoy many a night's blissful repose on his well-earned bedsted.

Many of the masters, whilst above wiping pipes, did not think it above their dignity to "swipe" a few prizes.

The supply houses were well represented, and among others the following were noticed : W. J. Wall and H. Lamontagne, of the Thos. Robertson Co. ; L. A. Paquette, of Warden King & Son ; R. Lockhart, of Gurney-Massey Co. ; L. A. Mongenais, of Star Iron Works ; H. McLaren, of Safford Radiators ; H. B. Cowper, of R. Mitchell & Co. ; —. Cochran, of Jas. Robinson & Co. ; —. Sullivan, of Pillow, Hersey & Co. ; —, Goodman, of Amiot, Lecours & La Riviere.

The following were the different committees : Games—Mr. Sadler (chairman), J. Watson, R. H. Larin, Joseph Cinq-Mars, Joseph Lamarche, J. W. Harris, E. Kavanagh, J. E. R. Mullin and T. Christie. Train—J. W. Harris, J. E. Mullin, Mr. Sadler and E. Kavanagh. Reception — J. Watson, Joseph O'Hara and Mr. Denman. Social—A. Clelland, James Mackie, W. Desormeau and J. McQuesten.

PLUMBING AND HEATING CONTRACTS.

Fiddes & Hogarth, plumbers, Toronto, have contracts for plumbing and heating of the Y.W.C.A. Home on Elm street, and for residences on Avenue and Admiral roads, and on Grosvenor, Jarvis and Beverley streets.

Rogers & Rogers, Summerside, P.E.I., have secured the contract for the heating and plumbing in H. C. Mills' new residence on Central street, Summerside ; also for Judge McLeod's residence in the same town.

Purdy, Mansell & Co., Toronto, have the contract for the plumbing in four houses on

PLUMBING AND HEATING NOTES.

The post office which is soon to be built in Woodstock will cost about $75,000.

The Penman Manufacturing Co. intend enlarging their factory at Coaticook, Que.

The Glace Bay, N.S., Plumbing, Heating, and General Repair Co. has quit business.

A by-law has been carried in Owen Sound, Ont., to erect an $18,000 central school in that place.

The Canadian Colored Cotton Mills Co. intend erecting a $25,000 addition to their mill in Milltown, N.S.

The stock of F. E. Bayer & Co., plumbers, Halifax, has been taken possession of under bill of sale.

Building operations in New Westminster, B.C., continue brisk. The Capital Box Co., Tacoma, Wash., intend building a woodenware factory there to cost about $40,000. T. E. Julian, architect, is asking tenders for a large brick and stone block. Many smaller buildings are being erected.

A by-law was passed by the citizens of Vancouver on August 25, giving the council power to raise a loan of $150,000 for the purpose of extending and improving the city sewerage system. At the same time a by-law to raise a loan of $20,000 for the purpose of acquiring certain lands fronting on English Bay for a public bathing beach and recreation grounds was lost.

TORONTO BUILDING PERMITS.

Building permits have been issued in Toronto to B. Panter, for a three-storey stone and brick store and dwelling at the corner of King and Spencer streets, to cost $3,000 ; to Dr. Wagner, for a brick and stone consulting room at the corner of Gerrard and Victoria streets, to cost $1,000 ; to John L. Pears, for a one-storey brick dwelling and stable on Davenport, near Avenue road, to cost $3,000 ; to Chas. S. Botsford, for a one-storey addition and alterations to his store at the corner of Queen and Hackney streets, to cost $4,500 ; to The York County Loan and Savings Co., for a pair of two-storey and attic stone and brick dwellings on Grafton avenue, near Triller street, to cost $4,400.

USEFUL LAMP TOOLS FOR SALE.

The Wanzer Lamp and Manufacturing Co., Hamilton, Ont., are advertising in this issue a number of machines which they have been using for small work in connection with their lamp. This is an opportunity for persons having use for such tools to procure them at low cost.

TRADE MARK J REGISTERED

"JARDINE" TIRE UPSETTERS WILL UPSET TIRES

Some machines sold as Upsetters will not. Perhaps you make as much money on the sale of a useless Upsetter as on a good one, but your customer does not. He don't want a machine because it is called an Upsetter; he wants a machine to upset tires. Sell him one of ours.

IT PAYS TO SELL THE BEST TOOLS

CURRENT MARKET QUOTATIONS.

Sept. 1, 1899.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

STAR HACK SAWS BUTCHER SAWS BRACKET SAWS

THE STAR HACK SAW

Has a file temper, and one 5-cent blade will do more work than $1 worth of files. It will cut off an inch square bar of steel 100 times without filing.

THE STAR BUTCHER SAW

Will cut four times as long without filing as any other kind in use. It will cut off a half-inch rod of iron 30 times.

THE STAR BRACKET SAW

Is taking the place of all other kinds.

None of these Star Saws are to be filed, as the price is less than the cost of filing. They are taking the place of all other saws as fast as they become known.

For Sale by Most Hardware Dealers

We also make a Power Hack Saw which may be found in most machine shops and iron working establishments, and should be found in all.

AMERICAN COW TIES

WILL OUTLAST ALL OTHERS.

This is because the form of the link, the exact size and shape of which are shown above, is such that the wear is distributed evenly over its entire end. The bearing surface is thus very large, and the chain will wear for years without becoming worn appreciably.

With other styles of chain the bearing surface is only a very small portion of the extreme end of the link. Grooves are soon formed, and in a comparatively short time the links are worn—or, properly speaking, cut—through.

These facts are well shown on a cow tie recently brought us for repairs. It was an ordinary No. 00 three chain tie. One chain was wire, the other two American. One of the wire links was worn entirely through. The others were nearly as bad—a strong pull would have broken almost any of them. With the American chains on the other hand, the wear was very slight, and hardly noticable—three times this amount would not have weaken d the chains seriously.

In addition, because of its flat link and smooth surface, American chain is much easier for the neck of the animal than the twisted or wire chain. The American link cannot injure the animal's neck—other styles of link are very liable to.

American Cow Ties are made in all the standard patterns and sizes. They are sold by all jobbers.

WHEN WRITING ADVERTISERS PLEASE MENTION THAT YOU SAW THEIR ADVERTISEMENT IN THIS PAPER

THE PRACTICE OF SUBSTITUTING.

IT is a mistake for merchants to substitute goods without first obtaining the consent of the purchaser. Even when the goods substituted are superior the practice is a dangerous one. People at least think they know what they want and it is an offence to them when they find that the goods they ordered are not the ones supplied.

This characteristic of the great mass of people may be born more of pride than of reason; but it exists, and not only exists but must be respected. Those who will not respect it cannot but expect to lose business.

This applies to the wholesale as well as to the retail merchant. HARDWARE AND METAL recently had proof of this.

A retailer who has met with a great deal of success in business was asked if he dealt with a certain wholesale house. He replied in the affirmative, but declared that he was gradually transfering his patronage to other houses, and explained that he was doing so because the wholesale house in question persistently substituted goods.

The retailer in question is doing a large and growing trade, and hence is a valuable customer.

While directly it may not be as profitable, when out of a line ordered, to secure it from a competitor, yet it is the wiser thing to do, and in the long run pays the best, for it does not, like substituting, tend to annoy and drive away customers. If the particular line cannot be obtained, the next alternative should be to ascertain if another can be substituted. Of course, there may be exceptions when the best thing to do is to send forward substituted goods with an explanatory note. As to when this is necessary the shipper's judgment only can determine. But merchants should only do this when they are fully persuaded that it is the best course, in the interest of the customer, to pursue.

SHOT POINTING UPWARDS.

Several makers, while they have not actually advanced prices on shot, are considering the advisability of doing so, owing to the increased cost of pig lead, their raw material, which has risen over 15c. per 100 lb. in the last ten days at primary markets.

The price of shot in Canada, owing to the competition between makers, has not been on a fair parity with the cost of manufacture, so that even if there was no rise in the cost of raw material there is still room for appreciation, and, of course, with the rise in lead, an advance becomes more probable.

COST OF OPERATING STREET CARS.

THE Metropolitan Railway Company, of New York City, has three systems of traction, namely, cable, electrical and horse car. It has 25.3 miles of cable system, 82.1 miles of underground electric, and 113.4 miles of horse car system.

About a year ago The Street Railway Journal published a statistical article dealing with the three systems for the year ending June 30, 1898, and now it has published another article dealing with the same three systems for the corresponding period of 1899. This enables a comparative statement of the receipts from the different systems to be made.

Taken as a whole, the metropolitan system was operated last year at 15.18c. per car mile, as against 15.83c. in the previous year, while the earnings from operation was 15.50c., against 13.87c. for 1898. The honor of securing the increased earning power is ascribed to the electric system.

The percentages of the operating expenses to passenger receipts of the three motive powers compare as follows:

	1898.	1899.
Cable	47.8	50 8
Electric	37.9	38.3
Horse	65.3	69.8
Average	53.3	49.4

One of the most interesting tables is that giving the operating expenses per car mile of the different systems.

The percentage of the total operating expenses of the cable system was 16.42 in 1898, and 17.99 in 1899; of the electric, 10.23 in 1898, and 11.97 in 1899; of the horse, 17.87 in 1898, and 17.96 in 1899.

With the cost of operating so much in favor of the electric system, we may soon expect the cable, like the horse car system, to become almost obsolete for street railway traffic.

In Canada, we have neither cable nor horse car system, electricity being the sole means of propelling street cars, both urban and suburban.

A MENACE TO CANADIAN SHIPPING AND TRADE.

WHILE it is possible for the Dominion Government to do a great deal more than it has done to popularize ocean travel via Canadian ports, yet there is a great deal that can be done by steamship owners themselves.

One thing, and the chief thing, they can do in pursuance of this is to exercise greater care in the loading of their ships. That there is necessity for reform in this particular is beyond question.

At the recent convention of the Maritime Board of Trade, composed of the leading business men, steamship owners and insurance men of the Maritime Provinces, a great deal of attention was given to the subject of marine insurance rates, and the excessive rates as against Canadian and in favor of United States ports.

There was at first a disposition to blame the British underwriters for the discrimination, and, while it was finally realized that these underwriters were not as well informed in regard to the respective Canadian routes as they should be, yet it was demonstrated that the chief onus for the so-called discrimination was not upon the underwriters but upon the owners and captains of the steamships. Mr. S. Schofield, St. John, N.B., representing the Furness Line, charged that the high marine insurance rates were due to the excessive deck loads that were carried by some of the steamers, and Mr. Horace Haszard, Charlottetown, P.E.I., corroborated this by stating that he had read the resolution of the British underwriters whereby the rates on steamers plying to Canadian Atlantic ports were increased, and in that resolution it distinctly stated that the cause of their action was the excessive deck loads carried by steamships.

It was significant that during the convention of the Maritime Board, one of the St. John papers published a cable stating that the captain of one of the steamers which had left that port recently had been fined £50 for having his vessel overloaded.

Now, a press despatch comes to hand with the statement that the Department of Marine and Fisheries is in receipt of complaints regarding the serious overloading of a number of steamers running out of Montreal. It was charged that in some instances vessels had been so heavily overloaded that at Cap a la Roche there were only six inches of water between the keel of the steamers and the rocky bottom of the river at that point.

To such a pass have matters come in regard to marine insurance that steamers insured at Lloyds are prohibited from plying to Canadian Atlantic ports until after a special permit has been obtained. And with the permit comes a higher rate of insurance.

This is a condition of affairs which obviously militates against not only the Canadian ports and the steamship lines plying thereto and therefrom, but against the trade and commerce of the Dominion.

It is, therefore, obvious that the Government should adopt, and without delay, efficient means to prevent the overloading of steamers running out of Canadian ocean ports.

We know that there are a good many steamship owners and captains who are opposed to Government supervision in such matters, but something must be done to prevent the continuance of a practice which causes to be imposed upon the Dominion conditions which handicap her in competition with her powerful neighbor.

BASIS OF THE SELLING PRICE.

Hardwaremen who are not following the market with the selling price of their goods are not following very closely the road to prosperity. Prices do not advance every year, or even every ten years, like they have been lately, and merchants who are not basing the selling price of their goods upon the buying price of to-day are making a mistake.

GOOD TRADE OUTLOOK.

Mr. S. A. Rankin, a general merchant of Falding, Ont., was among the visitors in Toronto the past week. Falding is a little village on the Ontario, Arnprior, and Parry Sound railway, and is seven miles from Parry Sound. Mr. Rankin reported trade good and the prospects bright in his part of the country. Lumbering operations promise well, the Conger Lumber Co. alone intending to take out 20,000,000 feet of lumber this year. "Tourist travel, both Canadian and American, has been immense this summer," said Mr. Rankin.

Falding is five miles from the Parry Sound copper mines, where a great deal of activity is being experienced.

Mr. Rankin has been in business about four years, and his trade has developed so much lately that he will have to erect a new storehouse.

DRY WHITE LEAD IN MONTREAL.

Some sellers have advanced the price of dry white lead in Montreal ½ to ¼c. per lb. to $5 to $5.50, but, nevertheless, at this writing, orders are still being accepted at $4.75 to $5. Buyers, however, find it rather difficult to fill wants and importers state that European makers are so overcrowded with orders that it is almost impossible to get shipments forward. An advance, therefore, with all sellers is highly probable.

COUNTERFEIT BILLS.

We hear again of counterfeit bills of the Dominion. There are said to be in circulation some $1 notes bearing the date of 1878. The bill, with the exception of the portrait of the Princess Louise, is well done, and, as an old bill has been imitated by the counterfeiter, it is most dangerous in that it is not easily detected by the average man. The imperfections are most noticeable in the drawing of the face, the profile being straight and out of line. In addition to that, the paper is of poor quality, but with all these discrepancies it has found its way into circulation.

These old bills ought not to be left in circulation at all. The Dominion should keep its paper money in clean condition. Some of the bills now in circulation are filthy. When paper money gets soiled and greasy the detection of counterfeit notes becomes very difficult. The very fact that bills are old and have apparently passed from hand to hand many times without question is accepted as a proof of their genuineness. Yet, what is easier than to make a counterfeit look old and dirty like the genuine note?

We understand that the manufacture of each note costs Canada about 2½ cents. That is not much. There must surely be some profit on circulation, taking silver and paper together, so that Government money can afford to be kept in good condition.

NEW WIRE NAIL LIST.

A REVISED list on steel wire nails came into effect this week, but the changes from the old list, as will be noted, are slight. The most important alteration consists in an advance of 10c. on the base price for 70d nails.

Formerly this size wire was included in the base. The base sizes now, as will be noted, are 30, 40, 50, and 60d nails, which sell at $3. The list in detail, which took effect September 1, is as follows :

Length.	Gauge.	Per lb. Cents.
1 to 1⅛-inch	" 16 and heavier,	26
	" 17 "	28
	" 18 "	30
1¼ to 1⅜-inch	" 15 "	22
	" 16 "	23

TINNED IRON SPOONS AND FORKS DEARER.

One of the largest manufacturers of tinned iron spoons and forks in the United States, Wallace Bros. & Co., has notified the jobbing trade in Canada of an advance of 33⅓ per cent. in prices of its 900 and 950 lines of spoons and forks.

This advance has been anticipated for some time.

AUGURS AND HAMMERS DEARER.

Following the example of their confreres in the United States, the Canadian manufacturers of augurs, augur bits, car bits, etc., have advanced their prices.

The following are the new discounts to the retail trade : Augurs and bits, 50 and 10 per cent.; rafting augurs, 37½ per cent.; millwrights' augurs, 32½ per cent.; ship augurs, 12½ per cent.; dowell bits, 32½ per cent.; car bits, 40 per cent.

The manufacturers assert that the advance is not in proportion to the increase in the cost of raw material, and that a further advance shortly is not improbable.

Hammers of Canadian make have been advanced on account of the increased cost of raw material.

BRIGHT WIRE GOODS HIGHER.

The makers of bright wire goods, such as screw-eyes and hooks, gate hooks and eyes, stovepipe eyes, etc., have changed their prices, the discount to the retail trade now being 50 and 10 per cent.

There has also been a sharp advance in the price of wire hat and coat hooks. The discount is now 45 per cent. instead of 60 and 10, as formerly.

ADVANCE IN AXES.

The axe manufacturers in Canada announce an advance in prices. The advance ranges all the way from 50c. to $1.25 per dozen. Axes that formerly sold at $4.75 are now quoted at $6 per dozen.

TRADE IN OTHER COUNTRIES THAN OUR OWN.

LONDON advices by cable quoted an advance of £1 per ton, or £81 for best selected copper. The price there for that variety of the metal was about £10 not long ago, when London authorities on the market and certain Boston and New York interests were profuse in bearish literature.

METALS IN GREAT BRITAN.

S. W. Royce & Co., Manchester, England, in their monthly metal market report, under date of August 26th, say: "This month opened with a heavy drop in values in pig iron, and prices continued to fall until about the middle of the month, since when there has been an improvement, though to-day's figures compared with those of a month ago show a decrease of about 6s. od. per ton in Scotch iron and about 9s. 3d. per ton in Cleveland. Business has indeed been dull, buyers naturally holding off in the face of such an unsettled state of affairs. During the last few days there has, however, been some improvement, and buyers are coming forward more readily, as there is a feeling that with autumn approaching the prices should now continue to advance. The Midlands manufactured iron trade is in a satisfactory condition, though recently quieter on account of holidays; there is, however, a good amount of trade passing, and in any case manufacturers are indifferent, being already well provided with work for some time ahead. Tin has fluctuated considerably this month, closing about £3 cheaper, and easy. Copper is down about 10s., and is steady. Spelter has lost about £2, and seems weak. Lead has advanced 7s. 6d., but is now rather easing.

WIRE AND NAILS DEARER IN THE UNITED STATES.

Under date of September 1, The American Steel & Wire Company sent out notices to the trade of an advance of 15c. per 100 lb., or $3 per ton in prices of wire nails, plain wire and galvanized wire. The price of painted barb wire has been advanced 50c. per 100 lb., or $10 per ton. This makes the price of wire nails $2.65 to the jobbing trade in carload lots; $2.67½ in less than carload lots; $2.80 to retailers in carload lots, and $2.90 to retailers in less than carload lots. The price of barbed wire is as follows: To jobbers in carload lots, painted, $3.10; to jobbers in carload lots, galvanized, $3.25; to jobbers in less than carload lots, painted, $3.12½; to jobbers in less than carload lots, galvanized, $3.27½; to retailers in carload lots, painted, $3.25; to retailers in carload lots, galvanized, $3.40; to retailers in less than carload lots, painted, $3.35; to retailers, in less than carload lots, galvanized, $3.50. The price of smooth wire is now as follows; To jobbers, in carload lots, $2.50; to jobbers, in less than carload lots, $2.52½; to retailers, in carload lots, $2.65; to retailers, in less than carload lots, $2.75. While these prices are very high, yet they are not out of proportion when prices of raw material are taken into consideration. At one time, wire nails sold as low as $1.35 Pittsburg, but this was when billets were $15 per ton and rods about $20. At the present time, billets can hardly be had at any price, and have sold at $38 per ton, while rods are about $45. The American Steel & Wire Company, in making these advances in prices of their products, are simply following the course of the raw material market. In spite of the heavy advances, the demand for wire nails and wire of all kinds has been very large, and the various mills of The American Steel & Wire Company are being operated to full capacity, and in some cases are considerably behind in orders.

HIGHER IRON PRICES.

It has been a week of large buying in foundry and grey forge irons, and on both prices have advanced, the conditions in Southern iron indicating excitement and tension. On non-Bessemer irons there seems no peradventure concerning 1900; most buyers and sellers apparently acting on the belief that prices will go yet higher, and that consumption for some time to come will keep in advance of production. In the steel end of the trade the development of the situation as it looks towards next year has not been so rapid. What appears is that demand is not gauged by price, and that steel works and finishing mills are full for months and are booking new business every week. Large producers are searchingly analyzing the record of each week, but the scrutiny has made no change in the tenor of their reports. There is a monotonous testimony to a rising tide whose high point does not appear.—Iron Trade Review, Sept. 7.

NEW YORK METAL MARKET.

COPPER — There were fewer hints yesterday than for some time past of copper being obtainable at lower prices than those currently quoted on the market. Instead of such hints intimations were given that some of the Lake Superior companies are holding out for a ¼ to ½c. advance. However, actual business, as far as could be learned, was at the old figures, except in a few instances where 18¾c. was paid for Lake Superior, and no facts came to light that reflected any change in the attiude of buyers or sellers. To all accounts new business here is not of remarkably large volume, but deliveries to consumers continue heavy and exports to Europe are liberal. The current quotations are 18½ to 18¾c. for Lake Superior ingot; 17¾c. for electrolytic bars, etc., and 17½c. for best casting stock.

PIG TIN — The margin of difference between prices for spot and future deliveries was widened yesterday in both the New York and the London market. In the latter the spot price stood about 15s. to £1 per ton above that of three months' futures, and in New York spot was about 0.50c. per lb. higher than September delivery. In both markets the line of prices was higher yesterday than on Tuesday, yet, irregular and not quotable with ordinary accuracy. Some business was affected at 32c. on spot, which price was subsequently bid, while 31.75c. was offered for lots on steamer nearly due.

PIG LEAD—There were no new developments in this line, ordinary business only and merely fair inquiry having been experienced, while sellers' prices remained almost stationary. Spot delivery was quoted at 4.62½ to 4.65, and late September and October shipments from the West 4.60c. delivered here.

SPELTER—Values were very firm at the advances quoted yesterday, both in this and the European market. The late rise was seemingly a natural result of closer relationship between producers, and the indications are that small purchases are much easier to make than large ones at current quotations. Good brands are now at about 5.75 to 5.80c. on spot and 5.65 to 5.70c. to arrive.

ANTIMONY—The market remains steady at 9¾ to 11c., as to brand and quality.

TINPLATE—Business is very tame, since neither manufacturers or buyers are inclined to deal pending the outcome of threatened labor difficulties, and prices as quoted are greatly nominal.

IRON AND STEEL—In the way of new pig iron contracts of extensive proportions nothing was reported, but there is considerable negotiation in which speculative interests as well as consumers are interested, and the basis of prices is up to previous highest point in almost all instances. The market, in short, continues strong.—N. Y. Journal of Commerce.

MR. GOODWILL TAKES A WIFE.

A FASHIONABLE wedding took place at St. Luke's church, Waterloo, on August 30, when Miss Elizabeth Charlotte Whitcomb, of Waterloo, elder daughter of Col. and Mrs. Charles Whitcomb, was married to Mr. Edward Goodwill, of The Thomas Davidson Manufacturing Co., of Montreal, the Rev. T. B. Jeakins officiating. Miss Mildred Whitcomb, the bride's sister, acted as maid of honor, and wore pink organdie. The bridesmaids, Miss Maude Davidson, daughter of Mr. James Davidson, of Montreal, and Miss Jessie Raymond, daughter of E. J. Raymond (nieces of the groom), wore gowns of blue and yellow organdie. The ushers were Mr. Duke Roberts, of West Shefford, and Mr. Mark Whitcomb, of Waterloo. Mr. J. Herbert Davidson was best man. The bride wore a handsome gown of ivory duchesse satin and carried a shower bouquet of white roses. After the ceremony, a reception was held at the residence of the bride's parents. Among the many presents received by the bride were two beautiful onyx clocks and a handsome upright piano, the latter the gift of her father.

The popularity of the groom with his fellow-workers was feelingly expressed in an address, accompanied by a handsome oak cabinet of silver. And, on the day of the wedding, congratulatory telegrams were sent by the travelers, so that from the Atlantic to the Pacific ocean, an unbroken chain of good wishes was extended to the happy couple, who, after the reception, left for an extended trip through the Lower Provinces.

Mr. Goodwill, who is a promising young business man, has been identified with The Thos. Davidson Co. for the past 16 years; in fact, commencing his business career with the firm, and for the past three years looked after the warehouse, and, during the succeeding two years, represented the firm on the road. He was the pioneer in opening up their business connections in the Lower Provinces and many parts of the Province of Quebec, and has made several business trips to the Pacific Coast, so that throughout Canada, wherever HARDWARE AND METAL is read, there will be friends who will read with pleasure the chronicling of this happy event. For the past three years Mr. Goodwill has taken charge of the sales department in this house, which, under his tireless energy, shrewd tactics and wise supervision, have made rapid strides, while he, with his kindly personality, has become very popular with all with whom he comes in contact.

With his newly acquired helpmate, Mr. Goodwill has the promise of a bright career before him, and HARDWARE AND METAL joins heartily with its readers in wishing him and his "good wife" best wishes for a happy and prosperous future.

"SELF SATISFACTION."

A merchant who has handled our goods for many years has written us as follows:

"I take pleasure in stating my position with regard to selling The Sherwin-Williams Co.'s Products in two words, viz.: 'self satisfaction.'

"A conscientious business man sees beyond a wholly pecuniary advantage, ease of selling, or having goods stay sold. He sees a future when to-day's buyer will need buy again, when, if he has honestly represented goods, and represented honest goods, he will have the present buyer for another and all time.

"Cheap goods are never the best. The best goods are always the cheapest.

"The foregoing refers directly to my business policy, therefore, I sell The Sherwin-Williams Paints and Colors, because paint is a branch of my business, a prominent and important branch.

"We can talk loud and long of S.-W. P. and bide no fear of being given the lie."

Goods that inspire such confidence are worth handling.

ELECTRIC PETROLEUM LIGHT.

One of the latest triumphs of the inventor's skill is the "Electric Petroleum Light." When one looks back to the time when the hardy pioneers of this country were dependent upon the ordinary "tallow dip" for their light, we cannot but wonder at the gigantic strides which have been made in artificial light. First, the slush lamp, made by filling a cup or other receptacle half full of earth, and pouring in melted fat, a piece of cloth or other substance was inserted and your lamp was complete. One can easily understand that a very feeble illumination was the result, and the stench was intolerable. After a few years the "tallow dip" took the place of the slush lamp, to be in turn supplanted by wax candles, and later by gas. With the increasing population, the necessity for a cheaper form of artificial light began to assert itself, and, as a result, coal oil found great favor with the masses. It was not exhorbitantly dear, and gave a fair modicum of illuminating power. The two great objections, however, to the use of coal oil were, the very unsteady flickering light, which hurt the eyes, and the peculiarly nauseous odor. By dint of perseverance coal oil was divested of many of its objectionable features, and sales increased until almost the whole world is using coal oil for illuminating purposes. Still, there was something lacking. The odor was hard to dispel, and the light, as already pointed out, was unsteady.

It remained for the inventor of the "Electric Petroleum Light" to remedy both these defects, and it is safe to say he has produced a light from ordinary coal oil, the equal of which has never yet been seen. By his invention a common lamp wick can be used continuously day and night, and only about two inches of wick will be consumed in a year. This seems incredible, but nevertheless is an accomplished fact. The nauseous odor of the coal oil has been entirely removed, and a pure, soft, steady incandescent light, double the ordinary, has been produced, which does not hurt the eyes. It is understood that the invention will be manufactured by The Electric Petroleum Light Co.

MOVED INTO HIS NEW STORE.

S. A. McCastney, hardware merchant, Acton, Ont., has just completed and moved into his fine new store. Mr. McCastney reports business good and prospects bright. He also carries on in connection a good tinware and stove trade, being a practical hand himself.

BUSINESS CHANGES.

DIFFICULTIES, ASSIGNMENTS, COMPROMISES.

O. M. ALGER, general merchant, Castleton, Ont., is offering to compromise at 50c. on the dollar.

O. P. Fraser, lumber, Ecumsecum Bridge, N.S., has assigned.

Ismael Goyette, general merchant, South Durham, Que., has assigned.

A meeting of the creditors of Alexandre Payette, tinsmith, St. Johns, Que., has been called.

F. L. Worden, general merchant, St. John, N.B., has effected a compromise with his creditors at 20c. on the dollar.

H. J. Stump & Co., general merchants, Purpleville, Ont., have assigned to J. Glanville, of John Macdonald & Co., Toronto.

SALES MADE AND PENDING.

E. A. Green, boatbuilder, Victoria, B.C., is advertising to sell out.

John Birlet, blacksmith, Monkton, Ont., is advertising his business for sale.

The assets of Pigeon & Co,, general merchants, Ottawa, have been sold at auction.

PARTNERSHIPS FORMED AND DISSOLVED.

The Hugman Window Shade Co., Granby, Que., have dissolved.

Shaw & Lloyd, general merchants, Bridgetown, N.S., have dissolved. Mr. Lloyd continues.

A copartnership has been registered by A. E. Caldwell and G. W. Borden, as dealers in coal, at Wolfeville, N.S., under the style of Caldwell & Borden.

CHANGES.

M. Shanghuessy, general merchant, Barrington, Que., has sold out.

Daniels & Tilson, general merchants, Burk's Falls, have left that place.

A. Royes & Co., agricultural implements, Clinton, have sold out to J. T. Gauthier.

The Royal Oil Co., Toronto, has sold out to The Queen City Oil Co., Limited, Toronto.

Beatty & Co., agricultural implements and furniture, Orangeville, have sold out their furniture department to Gray & Co.

Wong Fung, wife of Wing Tung, has been registered sole proprietress of the general business of Wai Bing Kee & Co., Nanaimo.

FIRES.

B. Bell, general merchant, Burk's Falls, has been burned out.

SMALL PORTS OF ENTRY.

Some importers are continuing to agitate for the enforcement of equal rates of duty at the smaller and larger ports of entry. This is a point to which we think the Minister should give his best attention. It is, no doubt, his wish that the law providing that the same class of goods should pay precisely the same rate of duty, no matter at what port they may be entered, should be enforced. It is only fair to the entire importing trade of the country — wholesale or retail — that it should. For this purpose the collectors at all ports, large or small, should be kept thoroughly posted on all new regulations, and be in close touch with the heads of the Customs Department at Ottawa. No doubt this is nominally the case now. Yet, importers are continually hearing of instances that look like the existence of unequal exactions of duty. These are not laid at the door of fraud or wrongdoing, but simply that the appraisement is different. This should not be so. If the collectors of small ports cannot be as well posted and as competent to exact precisely the same rate of duty on a shipment as it would have to pay at some large city like Halifax, Montreal or Victoria, then the small ports will have to be closed.

SLEIGH BELLS 10 PER CENT. DEARER.

Another advance has taken place in the price of sleigh bells. It averages about 10 per cent., and is the second similar advance within the last few months.

Those who placed their orders before the advance—and there were quite a few of them—were fortunate. When fixing their selling price the wise dealers will doubtless base it, not on what they bought at, but on what they would then have to pay if they went upon the market.

PERSONAL MENTION.

Mr. A. W. Humphreys, hardware merchant, Parkhill, is in Toronto this week.

HE TOOK NAILS.

The owner of a general store in a Western village got married. In this little town it is the custom for the happy bridegroom to set up the cigars for all the congratulating males who drop in to wish him joy. So the bridegroom in this instance had a box on the counter, and most of his patrons were regaled from it.

Pretty soon an ancient gentleman lounged in. The storekeeper, who felt friendly to all the world just then, pushed the box towards the new-comer.

"Have a cigar, Uncle Jim," he smilingly said.

Uncle Jim looked at the box and looked at the storekeeper.

"What's this for?" he asked.

The storekeeper slightly blushed.

"Been gettin' married."

"Who? You?

"Yep. Me,"

"An' you're standin' treat, eh?

"Yep," said the storekeeper.

The old man picked up a cigar.

"How much did these seegars cost ye, Ab?" he inquired.

"Oh," replied the storekeeper, "cost me 'bout four cents. They're nickel cigars."

The old man dropped the cigar back into the box. Then his gaze wandered around the store.

"Well, Ab," he slowly drawled, "ef it's all the same to you, I'll take a pound o'nails."

And he got them.—Cleveland Plaindealer.

TOO MUCH AND TOO LITTLE STOCK.

A CORRESPONDENT of Ironmonger recently wrote that journal as follows in regard to keeping stock :

"There are men who, not understanding the art of buying well, have locked up absolutely all their capital in stock, and stock which has been purchased without stopping to think whether it was required or likely to be required for the particular district in which they are located. They buy everything which is introduced to them by pushing travelers. They never trouble to ask a traveler who is the nearest ironmonger selling such-and-such a line, and then writing to him to ask what sort of success he has had with it. If the stock held is too great, the correct thing is to make an effort to realize such portions of it as may well be dispensed with. My experience is that many goods now held by country firms

RATHER DAMAGE BUSINESS

than keep it together, and should rather be in a wholesale dealer's warehouse than upon a retailer's shelves. Take an example : Suppose a certain article is made in a dozen or more sizes, a man such as I have in my mind will keep the whole range of them, whereas half would be ample for all reasonable demands, other sizes only being bought when required to execute special orders. Another fruitful source of overstocking is found in buying beyond the legitimate requirements of the district, buying larger quantities than can fairly be disposed of in order to gain better terms. Of course, there are two sides to this question, but one may lock up a lot of capital by these means, and appropriate much valuable warehouse room by buying more than one wants. It will be found more profitable to concentrate one's energies upon keeping the stock well assorted and within reasonable bounds than taxing one's brains to find a means of disposing of the surplus.

"In contrast to the men who buy everything are those who only buy from hand to mouth. Most firms fail to make a record of goods on order and not to hand. Every order given should be copied into the order-book, where it can be seen at any time and checked off as the goods come in.

A SIMPLE PLAN

for keeping the stock well assorted is to provide each of your staff with a small pocket-book, with alphabetical index in which are entered the names of the firms with whom you do business. Supposing an assistant has sold nearly the whole of the 2-inch cast butt-hinges in stock, and you purchase these from Kenrick's, he will turn to Kenrick's page in his book and put them down as wanted. Another assistant, having sold the last razor at a certain price, will put down in his book under the firm's name from whom razors are obtained, 'No. 360 razors to sell at 2s. 6d.; other numbers also getting short.' These books should be used only for stock ; orders for customers for goods not in stock ought to be put into the counter order-book, and ordered every night, no matter what it may be for. When a traveler's visit is advised the books can be looked over and a decent order often given without any trouble whatever, if the system is properly carried out. One of the greatest drawbacks to keeping stock properly assorted is the failure of the younger members of the staff to inform their superiors of anything they may happen to sell the last of. This matter wants indelibly impressing upon their memories, for it is the most important thing, to my mind, with which they can have to deal, but the one which they unfortunately too often neglect."

TINNING CAST IRON.

FROM time to time several correspondents have asked for particulars how to tin cast iron, says an exchange. The process is one which cannot be fully explained in a paragraph, but the following hints may be of service to many. A number of difficulties are to be encountered in tinning cast iron, one of which is the difficulty of securing castings that are alike in all respects. The last iron taken from the the cupola may not be like the first, as it has been subjected to the action of the heat a longer time. Two lots of castings from the same foundry may also differ, and a similar variation is found in castings from different foundries. The castings to be tinned should be first cleaned from oil or grease, which can be done by boiling in caustic soda-water, after which they should be rinsed in clear water. For the purpose of removing the scale, the castings are placed in a pickle composed of sulphuric acid and three or four parts of water. After the castings have remained in the pickle for a few days the scale shold be so loosened as to be easily removed by washing in clean water or by friction. The scale can also be removed by turning or filing. If it is not convenient to proceed with the tinning after the castings have been cleaned, they should be kept under clean water to protect them from the action of the air. For a flux, take ordinary soldering acid, to which add one-tenth part by weight of sal ammoniac. The cleaned castings are to be dipped in this solution, quickly dried, and then dipped in the melted tin, the surface of which is to be kept from the action of the air by being covered with tallow. While the above is a theoretical method for performing the operation, it may not result successfully, as the iron may not be of such a quality as to take the tin properly. This point can only be determined by actual experiment. Care should be taken during the work to prevent the melted tin from becoming too hot, otherwise the articles will be discolored.

Watson, Foster Company

Limited

Manufacturers of all grades of WALL PAPERS

Montreal, Canada.

The Factory Producing the Most Modern and Artistic Paper Hangings on the Continent.

Have you made your selection of Wall Papers for season 1899-1900? If not, now is the time to inspect our more-than-ever popular line. Our representatives are now on the road, and will have much pleasure to call on you and show you through our new samples. The frequent introduction of up-to-date novelties, nobby styles, artistic gems, and popular sellers all through the extensive collection will render the ordeal a pleasing one to you. It will require very little or no argument to convince you that our assortment embraces the kind of papers you should have to hold your best trade and increase the volume of your business.

OUR { **HEAVY 21-INCH PAPERS** in Flats, Plain Varnish Golds, and Embossed Varnish Golds
INGRAINS—Most Fashionable Shades, with twelve handsome, remarkably rich matched Friezes
EMBOSSED PULP EFFECTS—the newest specialty out

Will accomplish the above results for you.

Note.---Freight equalized with Toronto for towns West of Belleville and West and North of Toronto.

MARKETS AND MARKET NOTES.

QUEBEC MARKETS.

MONTREAL, September 8, 1899.

HARDWARE.

THERE is a good movement in general hardware, the upward tendency of values throughout the entire list causing buyers to be free purchasers for forward delivery. Barbed wire here is, as yet, unaffected by the rise in the United States. A moderate movement is noted in hay-baling wire. Fence staples are inquired for, and a revised list has been issued on wire nails. Cut nails are dull, and there is a moderate demand for horse nails and horseshoes. Screws, bolts, rivets, etc., continue in good request, and there has been another sharp advance in rope. Other lines have developed nothing special.
